CYBER W200 Beyond the Code: Cybersecurity in Context 3 Units
Terms offered: Summer 2020, Spring 2020, Fall 2019
This course explores the most important elements beyond technology that shape the playing field on which cybersecurity problems emerge and are managed. The course emphasizes how ethical, legal, and economic frameworks enable and constrain security technologies and policies. It introduces some of the most important macro-elements (such as national security considerations and interests of nation-states) and micro-elements (such as behavioral economic insights into how people understand and interact with security features). Specific topics include policymaking, business models, legal frameworks, national security considerations, ethical issues, standards making, and the roles of users, government, and industry.

Beyond the Code: Cybersecurity in Context: Read More [+]

Rules & Requirements

Prerequisites: MICS students only

Hours & Format

Fall and/or spring: 14 weeks - 3 hours of web-based lecture per week
Summer: 14 weeks - 3 hours of web-based lecture per week
Online: This is an online course.

Additional Details

Subject/Course Level: Information and Cybersecurity/Graduate
Grading: Letter grade.
Instructor: Hoofnagle

Beyond the Code: Cybersecurity in Context: Read Less [-]

CYBER W202 Cryptography for Cyber and Network Security 3 Units
Terms offered: Summer 2020, Spring 2020, Fall 2019
This course focuses on both mathematical and practical foundations of cryptography. The course discusses asymmetric and symmetric cryptography, Kerckhoff’s Principle, chosen and known plaintext attacks, public key infrastructure, X.509, SSL/TLS (https), and authentication protocols. The course will include an in-depth discussion of many different cryptosystems including the RSA, Rabin, DES, AES, Elliptic Curve, and SHA family cryptosystems. This course also introduces advanced topics of applied cryptography, including a brief introduction to homomorphic encrypted computation and secure multi-party computation to protect sensitive data during arbitrary computation, cryptocurrency and its cryptographic building blocks, and quantum computing.

Cryptography for Cyber and Network Security: Read More [+]

Rules & Requirements

Prerequisites: MICS students only

Hours & Format

Fall and/or spring: 14 weeks - 3 hours of web-based lecture per week
Summer: 14 weeks - 3 hours of web-based lecture per week
Online: This is an online course.

Subject/Course Level: Information and Cybersecurity/Graduate
Grading: Letter grade.
Instructor: Tygar

Cryptography for Cyber and Network Security: Read Less [-]
CYBER W204 Software Security 3 Units
Terms offered: Summer 2020, Spring 2020, Fall 2019
The course presents the challenges, principles, mechanisms and tools to make software secure. We will discuss the main causes of vulnerabilities and the means to avoid and defend against them. The focus is on secure programming practice, including specifics for various languages, but also covering system-level defenses (architectural approaches and runtime enforcement). We will also apply software analysis and vulnerability detection tools in different scenarios.
Software Security: Read More [+]  

Objectives & Outcomes

Course Objectives: 
* Apply and manage secure coding practices throughout software project development  
* Gain a good comprehension of the landscape of software security vulnerabilities, with specifics for various programming languages and types of software applications  
* Gain the ability to analyze the security of a software system and convincingly advocate about the significance of vulnerabilities  
* Know representative tools for software security analysis and testing, use them in practice and understand their capabilities and limitations  
* Recognize insecure programming patterns and know how to replace them with secure alternatives  

Student Learning Outcomes: Students will be able to apply and manage secure coding practices throughout software project development  
Students will be able to recognize insecure programming patterns and know how to replace them with secure alternatives  
Students will gain a good comprehension of the landscape of software security vulnerabilities, with specifics for various programming languages and types of software applications  
Students will gain the ability to analyze the security of a software system and convincingly advocate about the significance of vulnerabilities  
Students will know representative tools for software security analysis and testing, use them in practice and understand their capabilities and limitations  

Rules & Requirements

Prerequisites: CYBER W202 must be taken prior to or concurrently with CYBER W204. Knowledge of at least one non-scripting programming language (e.g. C, C++, or Java); fundamental knowledge of information systems (review of operating systems notions). MICS students only  

Hours & Format  
Fall and/or spring: 14 weeks - 3 hours of web-based lecture per week  
Summer: 14 weeks - 3 hours of web-based lecture per week  
Online: This is an online course.  

Additional Details

Subject/Course Level: Information and Cybersecurity/Graduate  
Grading: Letter grade.  
Instructor: Gillick  

Applied Machine Learning for Cybersecurity: Read Less [-]
**CYBER W210 Network Security 3 Units**
Terms offered: Summer 2020, Spring 2020, Fall 2019
Introduction to networking and security as applied to networks. Exercises cover network programming in a language of the student’s choice, understanding and analyzing packet traces using tools like wireshark and mitmproxy, as well as applying security principles to analyze and determine network security. After this course, the student will have a fundamental understanding of networking, TLS and security as it applies to networked systems.

Rules & Requirements

Prerequisites: MICS students only. Basic understanding of internet network protocols

Hours & Format

Fall and/or spring: 14 weeks - 3 hours of web-based lecture per week
Summer: 14 weeks - 3 hours of web-based lecture per week

Online: This is an online course.

Additional Details

Subject/Course Level: Information and Cybersecurity/Graduate

Grading: Letter grade.

Network Security: Read Less [-]

**CYBER W211 Operating System Security 3 Units**
Terms offered: Summer 2020, Spring 2020, Fall 2019
This survey of operating system security compares approaches to security taken among several modern operating systems. The course will teach how to conceptualize design issues, principles, and good practices in securing systems in today’s increasingly diverse and complex computing ecosystem, which extends from things and personal devices to enterprises, with processing increasingly in the cloud. We will approach operating systems individually and then build on them so that students learn techniques for establishing trust across a set of interoperating systems.

Rules & Requirements

Prerequisites: CYBER W200, CYBER W202, CYBER W204, and CYBER W210. Working knowledge of at least one object-oriented programming language and computer architecture (e.g. Intel x86-64bit). MICS students only

Hours & Format

Fall and/or spring: 14 weeks - 3 hours of web-based lecture per week
Summer: 14 weeks - 3 hours of web-based lecture per week

Online: This is an online course.

Additional Details

Subject/Course Level: Information and Cybersecurity/Graduate

Grading: Letter grade.

Operating System Security: Read Less [-]
CYBER W215 Usable Privacy and Security 3 Units
Terms offered: Summer 2020, Spring 2020, Fall 2019
Security and privacy systems can be made more usable by designing them with the user in mind, from the ground up. In this course, you will learn many of the common pitfalls of designing usable privacy and security systems, techniques for designing more usable systems, and how to evaluate privacy and security systems for usability. Through this course, you will learn methods for designing software systems that are more secure because they minimize the potential for human error.
Usable Privacy and Security: Read More [+]

Rules & Requirements
Prerequisites: MICS students only. CYBER W200, CYBER W202

Hours & Format
Fall and/or spring: 14 weeks - 3 hours of web-based lecture per week
Summer: 14 weeks - 3 hours of web-based lecture per week
Online: This is an online course.

Additional Details
Subject/Course Level: Information and Cybersecurity/Graduate
Grading: Letter grade.

Usable Privacy and Security: Read Less [-]
CYBER W233 Privacy Engineering 3 Units
Terms offered: Summer 2020, Spring 2020, Summer 2019
This course surveys privacy mechanisms applicable to systems engineering, with a particular focus on the inference threat arising due to advancements in artificial intelligence and machine learning. We will briefly discuss the history of privacy and compare two major examples of general legal frameworks for privacy from the United States and the European Union. We then survey three design frameworks of privacy that may be used to guide the design of privacy-aware information systems. Finally, we survey threat-specific technical privacy frameworks and discuss their applicability in different settings, including statistical privacy with randomized responses, anonymization techniques, semantic privacy models, and technical privacy mechanisms.

Objectives & Outcomes
Student Learning Outcomes: Students should be able to implement such privacy paradigms, and embed them in information systems during the design process and the implementation phase.
Students should be familiar with the different technical paradigms of privacy that are applicable for systems engineering.
Students should develop critical thinking about the strengths and weaknesses of the different privacy paradigms.
Students should possess the ability to read literature in the field to stay updated about the state of the art.

Rules & Requirements
Prerequisites: MICS students only; or, permission of instructor

Hours & Format
Fall and/or spring: 14 weeks - 3 hours of web-based lecture per week
Summer: 14 weeks - 3 hours of web-based lecture per week
Online: This is an online course.

Additional Details
Subject/Course Level: Information and Cybersecurity/Graduate
Grading: Letter grade.

Privacy Engineering: Read More [+]

CYBER W242 Government, National Security, and the Fifth Domain 3 Units
Terms offered: Summer 2020, Summer 2019
A variety of actors exploit government and private networks, systems, and data. Perpetrators target these systems to engage in cybercrime, espionage, disinformation campaigns, disruption of essential services, destruction of critical infrastructure, and the deletion, theft, or alteration of data. The government, military, and private sector have various roles and responsibilities with regard to the protection of the cyber domain. In this course, students critically evaluate these roles and responsibilities, the manner in which government networks, systems, and data are secured, and the ability of national and international cybersecurity strategies and partnerships to provide effective and efficient protection of the fifth domain.

Objectives & Outcomes
Student Learning Outcomes: Critically assess national and international cybersecurity strategies
Describe and evaluate national and international public-private partnerships.
Discuss the fifth domain and its protection within the context of national security.
Identify lessons learned and recommend ways to improve national and international approaches to cybersecurity.
Identify the roles and responsibilities of the military, government, and the private sector in cybersecurity.
Utilize an evidence-based approach to analyze the security of government networks and systems and privacy of retained data.

Rules & Requirements
Prerequisites: MICS students only. CYBER W200, CYBER W202

Hours & Format
Fall and/or spring: 14 weeks - 3 hours of web-based lecture per week
Summer: 14 weeks - 3 hours of web-based lecture per week
Online: This is an online course.

Additional Details
Subject/Course Level: Information and Cybersecurity/Graduate
Grading: Letter grade.

Government, National Security, and the Fifth Domain: Read Less [-]
CYBER W289 Public Interest Cybersecurity: The Citizen Clinic Practicum 3 Units
Terms offered: Summer 2020, Summer 2019
This course provides students with real-world experience assisting politically vulnerable organizations and persons around the world to develop and implement sound cybersecurity practices. In the classroom, students study basic theories and practices of digital security, intricacies of protecting largely under-resourced organizations, and tools needed to manage risk in complex political, sociological, legal, and ethical contexts. In the clinic, students work in teams supervised by Clinic staff to provide direct cybersecurity assistance to civil society organizations. We emphasize pragmatic, workable solutions that take into account the unique needs of each partner organization.

Rules & Requirements
Prerequisites: Master of Information and Cybersecurity students only

Hours & Format
Summer: 14 weeks - 6 hours of clinic and 3 hours of web-based lecture per week
Online: This is an online course.

Additional Details
Subject/Course Level: Information and Cybersecurity/Graduate
Grading: Letter grade.
Instructor: Weber

Public Interest Cybersecurity: The Citizen Clinic Practicum: Read More [+]

CYBER W295 Capstone 3 Units
Terms offered: Summer 2020, Spring 2020, Fall 2019
This capstone course will cement skills and knowledge learned throughout the Master of Information and Cybersecurity program: core cybersecurity technical skills, understanding of the societal factors that impact the cybersecurity domain and how cybersecurity issues impact humans, and professional skills such as problem-solving, communication, influencing, collaboration, and group management – to prepare students for success in the field. The centerpiece is a semester-long group project in which teams of students propose and select a complex cybersecurity issue and apply multi-faceted analysis and problem-solving to identify, assess, and manage risk and deliver impact.

Rules & Requirements
Prerequisites: CYBER W200, CYBER W202, and CYBER W204. MICS students only. Must be taken in final term of the MICS program

Hours & Format
Fall and/or spring: 14 weeks - 1.5 hours of web-based lecture and 1.5 hours of web-based discussion per week
Summer: 14 weeks - 1.5 hours of web-based lecture and 1.5 hours of web-based discussion per week
Online: This is an online course.

Additional Details
Subject/Course Level: Information and Cybersecurity/Graduate
Grading: Letter grade.
Instructor: Weber

Capstone: Read More [+]

Student Learning Outcomes: Engage in a highly collaborative process of idea generation, information sharing, and feedback that replicates key aspects of managing cybersecurity in an organizational setting. Learn or reinforce communication, influencing, and management skills. Practice using multi-faceted problem-solving skills to address complex cybersecurity issues.
CYBER 298 Directed Group Study in Cybersecurity 1 - 4 Units

Terms offered: Prior to 2007

This course provides an opportunity for graduate students to work on group projects in special topics in cybersecurity under the direction of an instructor. Students meet regularly with the instructor to scope the project, define final deliverables, identify relevant readings, identify content areas necessary to master in order to complete the project, and discuss progress.

Directed Group Study in Cybersecurity: Read More [+]

Rules & Requirements

Prerequisites: Master of Information and Cybersecurity students only; consent of instructor

Repeat rules: Course may be repeated for credit when topic changes. Students may enroll in multiple sections of this course within the same semester.

Hours & Format

Fall and/or spring: 14 weeks - 2-5 hours of directed group study per week

Summer: 14 weeks - 2-5 hours of directed group study per week

Additional Details

Subject/Course Level: Information and Cybersecurity/Graduate

Grading: Letter grade.

---

CYBER 299 Individual Study in Cybersecurity 1 - 12 Units

Terms offered: Prior to 2007

This course provides an opportunity for graduate students to work individually on special topics in cybersecurity under the direction of an instructor. Students meet regularly with the instructor to scope the project, define final deliverables, identify relevant readings, identify content areas necessary to master in order to complete the project, and discuss progress.

Individual Study in Cybersecurity: Read More [+]

Rules & Requirements

Prerequisites: Master of Information and Cybersecurity students only; consent of instructor

Repeat rules: Course may be repeated for credit when topic changes. Students may enroll in multiple sections of this course within the same semester.

Hours & Format

Fall and/or spring: 14 weeks - 2-13 hours of independent study per week

Summer: 14 weeks - 2-13 hours of independent study per week
