ECON 2 Introduction to Economics--Lecture Format 4 Units
Terms offered: Spring 2022, Fall 2020, Spring 2020
The course provides a survey of economics principles and methods. It covers both microeconomics, the study of consumer choice, firm behavior, and market interaction, and macroeconomics, the study of economic growth, unemployment, and inflation. Special emphasis is placed on the application of economic tools to contemporary economic problems and policies. Economics 2 differs from Economics 1 in that it has an additional hour of lecture per week and can thus cover topics in greater depth. It is particularly appropriate for intended economics majors.

**ECON 111 Applied Mechanism Design 4 Units**

Terms offered: Fall 1974

The course will analyze the roles of individual incentives, target group objectives and outcomes and how they are impacted by group decision making systems. A group decision making system is a way of making group level decisions. We examine this through the lens of game theory and mechanism design and other complementary analytic approaches. For example, we would examine the impact of having alternative election systems. This course draws primarily from microeconomic theory as an anchoring framework to evaluate these systems and individual actions. As with much of behavioral economics where we deal with real complex structures, we borrow from psychology (for behavioral theory) and business and politics (for real world examples).

**Rules & Requirements**

Prerequisites: -Required: Math 1A/1B or equivalent, Econ 1 or equivalent, Stats 20, 21, W21, 88, 131A, or 135 or equivalent -Preferred: (not required but nice to have for background) Econ 100A /101A (Intermediate Micro), Econ 110(Game Theory), Econ 140/141 (Econometrics)

ECON 119 Psychology and Economics 4 Units
Terms offered: Fall 2021, Summer 2021 First 6 Week Session, Fall 2020
This course presents psychological and experimental economics research demonstrating departures from perfect rationality, self-interest, and other classical assumptions of economics and explores ways that these departures can be mathematically modeled and incorporated into mainstream positive and normative economics. The course will focus on the behavioral evidence itself, especially on specific formal assumptions that capture the findings in a way that can be incorporated into economics. The implications of these new assumptions for theoretical and empirical economics will be explored.

**ECON 130 Using Economics for Public Policy 4 Units**

Terms offered: Fall 2021

This course explores how economics can be used to understand and evaluate public policies. We will use both economic theory and empirical evidence to study the varying impacts and incentives created by public policies. An emphasis will be placed on the application of economic tools to policy questions. The course will provide an overview of key research in several policy areas, including inequality and opportunity, the social safety net, education, criminal justice, tax policy, climate change and the environment, health care, and structural barriers to racial equity. The course will also provide an introduction to empirical techniques common in economics and policy analysis, including regression, cost-benefit analysis, and causal inference.

**ECON 127 Antitrust Economics and Law 4 Units**

Terms offered: Spring 2022

We will study both antitrust law and antitrust economics. Antitrust law governs the accumulation and exercise of market power. It prohibits both monopolization and agreements in unreasonable restraint of trade such as price fixing. It also prohibits anticompetitive mergers and a variety of specific competition problems such as exclusive dealing or tying arrangements. Deciding what qualifies as "monopolization," what qualifies as an "unreasonable restraint of trade," what qualifies as "anticompetitive," and more generally how to interpret the prohibitions of antitrust law invariably involves economic analysis. Such economic analysis commonly goes by the name "antitrust economics".

**ECON 133 Global Inequality and Growth 4 Units**
Terms offered: Spring 2022, Spring 2021, Spring 2020
This course provides an introduction to the analysis of economic inequalities and the interplay between inequality and economic growth. It focuses on three sets of core questions: 1) How does inequality evolve over the path of development? 2) What are the theories that can explain the degree of economic inequalities and its dynamic? 3) How do policies affect inequalities, and what types of policies can foster equitable growth? The course addresses these issues from a global and historical perspective: it comprehensively deals with the United States today, but also with inequality in China, India, Latin America, and Europe, as far back as 1700.

ECON 139 Intermediate Financial Economics
4 Units
Terms offered: Spring 2021, Fall 2020, Spring 2020
This is a 4-unit advanced undergraduate course designed for
undergraduates in Economics, Statistics, Mathematics, and Industrial
Engineering/Operations Research who are interested in financial
economics and finance. This course will stress the link between financial
economics and equilibrium theory. Less attention will be devoted to
purely financial topics such as the valuation of derivatives. This course
is intended as the segue between a first course in financial economics
(at the undergraduate level) and graduate-level courses in financial
economics and finance.

The idea is to introduce students to the full range of topics typically
covered by a financial economics and/or discrete time asset pricing
course at the doctoral level.

ECON 144 Financial Econometrics 4 Units
Terms offered: Prior to 2007
Since much of financial econometrics is based on time-series data, we will spend the first three weeks introducing/reviewing basic time-series analysis. The course will then start out by discussing the short-run time-series behaviour of stock prices, and present the evidence on short- and long-run predictability of stock returns. We will continue by discussing cross-sectional models and static equilibrium theory, including (but not limited to) the Capital Asset Pricing Model (CAPM) and Arbitrage Pricing Theory (APT). The course will then consider intertemporal equilibrium models, including (but not limited to) Arrow-Debreu pricing theory and the consumption-based CAPM. Finally, the course will look at fixed-income securities and derivative.

Rules & Requirements
Prerequisites: Students need a basic understanding of the principles of finance, as well as introductory econometrics. Working knowledge of multi-variable calculus, linear algebra, and probability and statistics will be assumed. Required courses: Economics 136, Economics 140/141, or equivalent. Recommended courses: Economics 139, or equivalent.

ECON C184 International Environmental Economics 4 Units
Terms offered: Fall 2021, Fall 2020
This course studies the following question: How should policymakers and scholars design and analyze environmental policy in a globalized world where much economic activity and pollution crosses political borders? The course addresses issues including climate change, air and water pollution, deforestation, species extinction, and others. The course also analyzes a variety of ways that countries and regions interact, including trade, foreign direct investment, outsourcing, international agreements and treaties, and others. The course also teaches a range of tools used to analyze these issues, including life-cycle (also called environmental footprint) analysis, simple econometrics, environmental market design, non-market valuation, and the data.

Objectives & Outcomes
Course Objectives:
1. Develop a strong grasp of the main debates and ideas involving international environmental economics
2. Learn to interpret, apply, and critically assess methods used to study international environmental economic issues
3. Build skills in reading basic economic writing involving these issues, including an understanding of their evidence and conclusions, and ability to critically evaluate the basis for these conclusion

Student Learning Outcomes:
1. A strong grasp of the main scholarly debates and ideas involving international environmental economics
2. The ability to interpret and critically assess methods used to study international environmental economic issues, including: life-cycle analysis and input-output tables; simple econometric estimates; the design of environmental policy; non-market valuation; and the use of remote sensing (satellite) data
   The ability to read basic empirical environmental economics papers, understand their evidence and conclusions, and critically evaluate the basis for these conclusions

| ECON 206   | Mechanism Design and Agency Theory               | 3     | Spring 2019, Spring 2018, Spring 2017 | This course will study the optimal design of mechanisms in the presence of incomplete information and imperfect observability. The course will begin with the "classic" principal-agent problem and will then develop its applications to the "implicit contracts" theory of agency and to the choice of government policies for regulated industries. The second half of the course will treat the design of auctions, regulation with costly or imperfect monitoring, mechanism design with limited contracts. ECON 219A Foundations of Psychology and Economics 3 Units
Terms offered: Fall 2021, Fall 2019, Fall 2018
This course presents psychological and experimental economics research demonstrating departures from perfect rationality, self-interest, and other classical assumptions of economics and explores ways that these departures can be mathematically modeled and incorporated into mainstream positive and normative economics. The course will focus on the behavioral evidence itself, especially on specific formal assumptions that capture the findings in a way that can be used by economists. Economic applications will be used for illustrative purposes, but the course will emphasize formal theory.

This seminar features current research of faculty, from UC Berkeley and elsewhere, and of advanced doctoral students who are investigating the efficacy of economic and non-economic forms of organization. An interdisciplinary perspective—combining aspects of law, economics, and organization—is maintained. Markets, hierarchies, hybrids, bureaus, and the supporting institutions of law and politics all come under scrutiny. The aspiration is to progressively build toward a new science of organization.

Terms offered: Spring 2022, Spring 2021, Spring 2020  
Government intervention changes opportunities and incentives for firms, families, individuals, service providers, and state and local government. This course considers the incentive effects of government expenditure programs. The primary emphasis will be in the examination of the effect of social expenditure programs on individuals and families. Most of the papers will be empirical. The course will not contain an explicit section on methodology and econometric techniques; instead, relevant econometric techniques (e.g., discrete choice, duration analysis) will be discussed in the context of the empirical literature.
