INFO C8 Foundations of Data Science 4 Units
Terms offered: Fall 2022, Summer 2022 8 Week Session, Spring 2022, Fall 2021, Summer 2021 8 Week Session, Fall 2020
Foundations of data science from three perspectives: inferential thinking, computational thinking, and real-world relevance. Given data arising from some real-world phenomenon, how does one analyze that data so as to understand that phenomenon? The course teaches critical concepts and skills in computer programming and statistical inference, in conjunction with hands-on analysis of real-world datasets, including economic data, document collections, geographical data, and social networks. It delves into social and legal issues surrounding data analysis, including issues of privacy and data ownership.

Foundations of Data Science: Read More [+]

Rules & Requirements

Prerequisites: This course may be taken on its own, but students are encouraged to take it concurrently with a data science connector course (numbered 88 in a range of departments)

Credit Restrictions: Students will receive no credit for DATA C8/COMPSCI C8/INFO C8/STAT C8 after completing COMPSCI 8, or DATA 8. A deficient grade in DATA C8/COMPSCI C8/INFO C8/STAT C8 may be removed by taking COMPSCI 8, COMPSCI 8, or DATA 8.

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week
Summer: 8 weeks - 6 hours of lecture and 4 hours of laboratory per week

Additional Details

Subject/Course Level: Information/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Instructor: Laskowski

INFO W18 Python Fundamentals for Data Science 4 Units
Terms offered: Summer 2020 10 Week Session, Summer 2019 10 Week Session, Summer 2018 10 Week Session
A fast-paced introduction to the Python programming language geared toward students of data science. The course introduces a range of Python objects and control structures, then builds on these with classes on object-oriented programming. The last section of the course is devoted to Python’s system of packages for data analysis. Students will gain experience in different styles of programming, including scripting, object-oriented design, test-driven design, and functional programming. Aside from Python, the course also covers use of the command line, coding and presentation with Jupyter notebooks, and source control with Git and GitHub.

Python Fundamentals for Data Science: Read More [+]

Rules & Requirements

Prerequisites: Previous experience in a general-purpose programming language is strongly recommended

Hours & Format

Summer: 10 weeks - 6 hours of web-based lecture per week

Online: This is an online course.

Additional Details

Subject/Course Level: Information/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Instructor: Laskowski

Python Fundamentals for Data Science: Read Less [-]
INFO 88A Data and Ethics 2 Units
Terms offered: Spring 2017, Fall 2016, Spring 2016
This course provides an introduction to critical and ethical issues surrounding data and society. It blends social and historical perspectives on data with ethics, policy, and case examples to help students develop a workable understanding of current ethical issues in data science. Ethical and policy-related concepts addressed include: research ethics; privacy and surveillance; data and discrimination; and the “black box” of algorithms. Importantly, these issues will be addressed throughout the lifecycle of data— from collection to storage to analysis and application. Course assignments will emphasize researcher and practitioner reflexivity, allowing students to explore their own social and ethical commitments.

Data and Ethics: Read More [+]

Objectives & Outcomes

Student Learning Outcomes: Upon completion of the course, students will be able to critically assess their own work and education in the area of data science. Upon completion of the course, students will be able to identify and articulate basic ethical and policy-based frameworks. Upon completion of the course, students will understand the relationship between data, ethics, and society.

Rules & Requirements

Prerequisites: This course is meant to be taken concurrently with Computer Science C8/Statistics C8/Information C8. Students may take more than one 88 (data science connector) course if they wish, ideally concurrent with or after having taken the C8 course.

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details

Subject/Course Level: Information/Undergraduate

Grading/Final exam status: Letter grade. Alternative to final exam.

Data and Ethics: Read Less [-]

INFO 98 Directed Group Study for Lower Division Undergraduates 1 - 4 Units
Terms offered: Spring 2022, Fall 2021, Fall 2020
Lectures and small group discussions focusing on topics of interest, varying from semester to semester.

Directed Group Study for Lower Division Undergraduates: Read More [+]

Rules & Requirements

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format

Fall and/or spring: 15 weeks - 1-4 hours of directed group study per week

Subject/Course Level: Information/Undergraduate

Grading/Final exam status: Offered for pass/not pass grade only. Final exam not required.

Directed Group Study for Lower Division Undergraduates: Read Less [-]

INFO 101 Introduction to Information Studies 3 Units
Terms offered: Fall 2022
This class introduces key issues, concepts, and methodologies of information studies. Students consider questions such as: what does it mean to live in an information society? What are the human and social aspects of the design of technology? How do policy, law, and other social forces affect this? How can technology and data be designed for social good? Students will become familiar with the kinds of research and multidisciplinary methods used in information studies. Students leave the course with tools to understand the politics, economics, and culture of information systems; a nuanced understanding of contemporary case studies involving technological systems in society; and a solid foundation for further study in information science.

Introduction to Information Studies: Read More [+]

Objectives & Outcomes

Student Learning Outcomes: Be introduced to the technology industry, technology design, human-computer interaction, and ‘the sociotechnical’ Establish a foundation for succeeding in additional upper-division INFO courses. Gain a nuanced understanding of contemporary case studies involving technological systems in society Learn tools to understand the politics, economics, and culture of information systems

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Information/Undergraduate

Grading/Final exam status: Letter grade. Alternative to final exam.

INFO 103 History of Information 4 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
Surveying history through the lens of information and information through the lens of history, this course looks across time to consider what might distinguish ours as "the information age" and what that description implies about the role of "information technology" across time. We will select moments in societies' development of information production, circulation, consumption, and storage from the earliest writing and numbering systems to the world of Social Media. In every instance, we'll be concerned with what and when, but also with how and why. Throughout we will keep returning to questions about how information-technological developments affect society and vice versa?
History of Information: Read More [+]

Additional Details
Subject/Course Level: Information/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Front-End Web Architecture: Read Less [-]
INFO 159 Natural Language Processing 4 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
This course introduces students to natural language processing and exposes them to the variety of methods available for reasoning about text in computational systems. NLP is deeply interdisciplinary, drawing on both linguistics and computer science, and helps drive much contemporary work in text analysis (as used in computational social science, the digital humanities, and computational journalism). We will focus on major algorithms used in NLP for various applications (part-of-speech tagging, parsing, coreference resolution, machine translation) and on the linguistic phenomena those algorithms attempt to model. Students will implement algorithms and create linguistically annotated data on which those algorithms depend.

Natural Language Processing: Read More [+]

Rules & Requirements
Prerequisites: Computer Science 61B; Computer Science 70, Computer Science C100, Math 55, Statistics C100, Statistics 134 or Statistics 140; strong programming skills

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

INFO 188 Behind the Data: Humans and Values 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This course blends social and historical perspectives on data with ethics, law, policy, and case examples to help students understand current ethical and legal issues in data science and machine learning. Legal, ethical, and policy-related concepts addressed include: research ethics; privacy and surveillance; bias and discrimination; and oversight and accountability. These issues will be addressed throughout the lifecycle of data—from collection to storage to analysis and application. The course emphasizes strategies, processes, and tools for attending to ethical and legal issues in data science work. Course assignments emphasize researcher and practitioner reflexivity, allowing students to explore their own social and ethical commitments.

Behind the Data: Humans and Values: Read More [+]

Objectives & Outcomes
Student Learning Outcomes: Critically assess one’s own work and education in data science. Identify and articulate basic ethical and policy frameworks. Understand the relationship between one’s own work and ethical frameworks and legal obligations.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Grading/Final exam status: Offered for pass/not pass grade only. Final exam not required.

INFO 201 Research Design and Applications for Data and Analysis 3 Units
Terms offered: Fall 2022, Spring 2022, Fall 2021
Introduces the data sciences landscape, with a particular focus on learning data science techniques to uncover and answer the questions students will encounter in industry. Lectures, readings, discussions, and assignments will teach how to apply disciplined, creative methods to ask better questions, gather data, interpret results, and convey findings to various audiences. The emphasis throughout is on making practical contributions to real decisions that organizations will and should make. Course must be taken for a letter grade to fulfill degree requirements.
Research Design and Applications for Data and Analysis: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 1.5 hours of lecture per week

Additional Details
Subject/Course Level: Information/Graduate
Grading: Letter grade.

INFO 202 Information Organization and Retrieval 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This course introduces the intellectual foundations of information organization and retrieval: conceptual modeling, semantic representation, vocabulary and metadata design, classification, and standardization, as well as information retrieval practices, technology, and applications, including computational processes for analyzing information in both textual and non-textual formats.
Information Organization and Retrieval: Read More [+]

Rules & Requirements
Prerequisites: Students should have a working knowledge of the Python programming language

INFO 203 Social Issues of Information 3 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
This course is designed to be an introduction to the topics and issues associated with information and information technology and its role in society. Throughout the semester we will consider both the consequence and impact of technologies on social groups and on social interaction and how society defines and shapes the technologies that are produced. Students will be exposed to a broad range of applied and practical problems, theoretical issues, as well as methods used in social scientific analysis. The four sections of the course are: 1) theories of technology in society, 2) information technology in workplaces, 3) automation vs. humans, and 4) networked sociability.
Social Issues of Information: Read More [+]
INFO 213 User Interface Design and Development 4 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020

INFO 214 User Experience Research 3 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
This course addresses concepts and methods of user experience research, from understanding and identifying needs, to evaluating concepts and designs, to assessing the usability of products and solutions. We emphasize methods of collecting and interpreting qualitative data about user activities, working both individually and in teams, and translating them into design decisions. Students gain hands-on practice with observation, interview, survey, focus groups, and expert review. Team activities and group work are required during class and for most assignments. Additional topics include research in enterprise, consulting, and startup organizations, lean/agile techniques, mobile research approaches, and strategies for communicating findings.

INFO 217A Human-Computer Interaction (HCI) Research 3 Units
Terms offered: Fall 2021, Fall 2020
This course is a graduate-level introduction to HCI research. Students will learn to conduct original HCI research by reading and discussing research papers while collaborating on a semester-long research project. Each week the class will focus on a theme of HCI research and review foundational and cutting-edge research relevant to that theme. The class will focus on the following areas of HCI research: ubiquitous computing, social computing, critical theory, and human-AI interaction. In addition to these research topics the class will introduce common qualitative and quantitative methodologies in HCI research.

INFO 218 Concepts of Information 3 Units
Terms offered: Spring 2022, Spring 2020, Spring 2018
As it's generally used, "information" is a collection of notions, rather than a single coherent concept. In this course, we'll examine conceptions of information based in information theory, philosophy, social science, economics, and history. Issues include: How compatible are these conceptions; can we talk about "information" in the abstract? What work do these various notions play in discussions of literacy, intellectual property, advertising, and the political process? And where does this leave "information studies" and "the information society"? Concepts of Information: Read More [+]

INFO 217A Human-Computer Interaction (HCI) Research: Read More [+]

INFO 218 Concepts of Information: Read Less [-]
INFO 225 Managing in Information-Intensive Companies 3 Units
Terms offered: Fall 2021, Fall 2020, Fall 2018
This course focuses on managing people in information-intensive firms and industries, such as information technology industries. Topics include managing knowledge workers; managing teams (including virtual ones); collaborating across disparate units, giving and receiving feedback; managing the innovation process (including in eco-systems); managing through networks; and managing when using communication tools (e.g., tele-presence). The course relies heavily on cases as a pedagogical form.

Managing in Information-Intensive Companies: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Grading: Letter grade.
Instructor: Hansen

INFO 232 Applied Behavioral Economics for Information Systems 3 Units
Terms offered: Spring 2022, Spring 2021, Fall 2019
"Behavioral Economics" is one important perspective on how information impacts human behavior. The goal of this class is to deploy a few important theories about the relationship between information and behavior, into practical settings — emphasizing the design of experiments that can now be incorporated into many ‘applications’ in day-to-day life. Truly ‘smart systems’ will have built into them precise, testable propositions about how human behavior can be modified by what the systems tell us and do for us. So let’s design these experiments into our systems from the ground up! This class develops a theoretically informed, practical point of view on how to do that more effectively and with greater impact.

Applied Behavioral Economics for Information Systems: Read More [+]

Rules & Requirements
Credit Restrictions: Students will receive no credit for Information 232 after completing Information 290 sect 6 (Fall 13).

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Information/Graduate
Grading: Letter grade.
Instructor: Weber

INFO 233 Social Psychology and Information Technology 3 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
Discusses application of social psychological theory and research to information technologies and systems; we focus on sociological social psychology, which largely focuses on group processes, networks, and interpersonal relationships. Information technologies considered include software systems used on the internet such as social networks, email, and social games, as well as specific hardware technologies such as mobile devices, computers, wearables, and virtual/augmented reality devices. We examine human communication practices, through the lens of different social psychology theories, including: symbolic interaction, identity theories, social exchange theory, status construction theory, and social networks and social structure theory.

Social Psychology and Information Technology: Read More [+]

Instructor: Cheshire
INFO 234 Information Technology Economics, Strategy, and Policy 3 Units
Terms offered: Spring 2022, Spring 2021, Spring 2019
Application of economic tools and principles, including game theory, industrial organization, information economics, and behavioral economics, to analyze business strategies and public policy issues surrounding information technologies and IT industries. Topics include: economics of information; economics of information goods, services, and platforms; strategic pricing; strategic complements and substitutes; competition models; network industry structure and telecommunications regulation; search and the "long tail"; network cascades and social epidemics; network formation and network structure; peer production and crowdsourcing; interdependent security and privacy.
Information Technology Economics, Strategy, and Policy: Read More [+]
Objectives & Outcomes
INFO 234 is a graduate level course in the school's topical area of Information Economics and Policy, and can be taken by the masters and doctoral students to satisfy their respective degree requirements.

Student Learning Outcomes:
Students will learn to identify, describe, and analyze business strategies and public policy issues of particular relevance to the information industry. Students will learn and apply economic tools and principles to analyze phenomena such as platform competition, social epidemics, and peer production, and current policy issues such as network neutrality and information privacy. Through integrated assignments and project work, the students will apply the theoretical concepts and analytic tools learned in lectures and readings to develop and evaluate a business model, product, or service of their choosing, e.g., a start-up idea they are pursuing.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

INFO 236 Privacy Law for Technologists 3 Units
Terms offered: Spring 2019
Information privacy law profoundly shapes how internet-enabled services work. This course translates regulatory demands flowing from the growing field of privacy and security law to those who are creating interesting and transformative internet-enabled services. We focus both on formal requirements of the law and on how technology might accommodate regulatory demands and goals. Topics include: Computer Fraud and Abuse Act, unfair/deceptive trade practices, Electronic Communications Privacy Act, children's privacy, big data and discrimination, Digital Millennium Copyright Act, intermediary liability issues, ediscovery and data retention, anti-marketing laws, and technical requirements of the European Union-United States Privacy Shield.

INFO 239 Technology and Delegation 3 Units
Terms offered: Fall 2021, Fall 2019, Fall 2018
The introduction of technology increasingly delegates responsibility to technical actors, often reducing traditional forms of transparency and challenging traditional methods for accountability. This course explores the interaction between technical design and values including: privacy, accessibility, fairness, and freedom of expression. We will draw on literature from design, science and technology studies, computer science, law, and ethics, as well as primary sources in policy, standards and source code. We will investigate approaches to identifying the value implications of technical designs and use methods and tools for intentionally building in values at the outset.

INFO 241 Experiments and Causal Inference
3 Units
Terms offered: Fall 2022, Spring 2022
This course introduces students to experimentation in data science. Particular attention is paid to the formation of causal questions, and the design and analysis of experiments to provide answers to these questions. This topic has increased considerably in importance since 1995, as researchers have learned to think creatively about how to generate data in more scientific ways, and developments in information technology has facilitated the development of better data gathering.
Experiments and Causal Inference: Read More [+]

INFO 251 Applied Machine Learning 4 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
Provides a theoretical and practical introduction to modern techniques in applied machine learning. Covers key concepts in supervised and unsupervised machine learning, including the design of machine learning experiments, algorithms for prediction and inference, optimization, and evaluation. Students will learn functional, procedural, and statistical programming techniques for working with real-world data.
Applied Machine Learning: Read More [+]

Objectives & Outcomes
Student Learning Outcomes:
• Effectively design, execute, and critique experimental and non-experimental methods from statistics, machine learning, and econometrics.
• Implement basic algorithms on structured and unstructured data, and evaluate the performance of these algorithms on a variety of real-world datasets.
• Understand the difference between causal and non-causal relationships, and which situations and methods are appropriate for both forms of analysis.
• Understand the principles, advantages, and disadvantages of different algorithms for supervised and unsupervised machine learning.

Rules & Requirements
Prerequisites: Info 206, or equivalent course in Python programming; Info 271B, or equivalent graduate-level course in statistics or econometrics; or permission of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Information/Graduate
Grading: Letter grade.
Instructor: Blumenstock
Applied Machine Learning: Read Less [-]
INFO 253A Front-End Web Architecture 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This course is a survey of technologies that power the user interfaces of web applications on a variety of devices today, including desktop, mobile, and tablet devices. This course will delve into some of the core Front-End languages and frameworks (HTML/CSS/JS/React/Redux), as well as the underlying technologies enable web applications (HTTP, URI, JSON). The goal of this course is to provide an overview of the technical issues surrounding user interfaces powered by the web today, and to provide a solid and comprehensive perspective of the Web's constantly evolving landscape.

Rules & Requirements
Prerequisites: Introductory programming

INFO 253B Back-End Web Architecture 3 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
This course is a survey of web technologies that are used to build back-end systems that enable rich web applications. Utilizing technologies such as Python, Flask, Docker, RDBMS/NoSQL databases, and Spark, this class aims to cover the foundational concepts that drive the web today. This class focuses on building APIs using micro-services that power everything from content management systems to data engineering pipelines that provide insights by processing large amounts of data. The goal of this course is to provide an overview of the technical issues surrounding back-end systems today, and to provide a solid and comprehensive perspective of the web's constantly evolving landscape.

Rules & Requirements
Prerequisites: Introductory programming

INFO 256 Applied Natural Language Processing 3 Units
Terms offered: Fall 2021, Spring 2019, Fall 2016
This course examines the state-of-the-art in applied Natural Language Processing (also known as content analysis and language engineering), with an emphasis on how well existing algorithms perform and how they can be used (or not) in applications. Topics include part-of-speech tagging, shallow parsing, text classification, information extraction, incorporation of lexicons and ontologies into text analysis, and question answering. Students will apply and extend existing software tools to text-processing problems.

Rules & Requirements
Prerequisites: Proficient programming in python (programs of at least 200 lines of code), proficient with basic statistics and probabilities

INFO 257 Database Management 3 Units
Terms offered: Spring 2020, Spring 2019, Spring 2018
Introduction to relational, hierarchical, network, and object-oriented database management systems. Database design concepts, query languages for database applications (such as SQL), concurrency control, recovery techniques, database security. Issues in the management of databases. Use of report writers, application generators, high-level interface generators.

Rules & Requirements
Prerequisites: Introductory programming

New Additions
- Added practical examples to the course material
- Updated guidelines for students to ensure a better learning experience
- Increased focus on real-world applications

Additional Details
Subject/Course Level: Information/Graduate
Grading: Letter grade.

INFO 258 Data Engineering 4 Units
Terms offered: Fall 2022
This course will cover the principles and practices of managing data at scale, with a focus on use cases in data analysis and machine learning. We will cover the entire life cycle of data management and science, ranging from data preparation to exploration, visualization and analysis, to machine learning and collaboration, with a focus on ensuring reliable, scalable operationalization.

INFO 259 Natural Language Processing 4 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
This course introduces students to natural language processing and exposes them to the variety of methods available for reasoning about text in computational systems. NLP is deeply interdisciplinary, drawing on both linguistics and computer science, and helps drive much contemporary work in text analysis (as used in computational social science, the digital humanities, and computational journalism). We will focus on major algorithms used in NLP for various applications (part-of-speech tagging, parsing, coreference resolution, machine translation) and on the linguistic phenomena those algorithms attempt to model. Students will implement algorithms and create linguistically annotated data on which those algorithms depend.

Rules & Requirements

INFO 258 Data Engineering
Prerequisites: INFO 206B or equivalent college-level course in computer science in Python with a C- or better AND COMPSCI C100/DATA C100/STAT C100 or COMPSCI 189 or INFO 251 or DATA 144 or equivalent college-level course in data science with a C- or better

Rules & Requirements

INFO 259 Natural Language Processing
Prerequisites: Familiarity with data structures, algorithms, linear algebra, and probability

Rules & Requirements

Hours & Format

INFO 258 Data Engineering
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

INFO C260F Machine Learning in Education 3 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020, Fall 2018, Fall 2017
This course covers computational approaches to the task of modeling learning and improving outcomes in Intelligent Tutoring Systems (ITS) and Massive Open Online Courses (MOOCs). We will cover theories and methodologies underpinning current approaches to knowledge discovery and data mining in education and survey the latest developments in the broad field of human learning research. The course is project based; teams will be introduced to online learning platforms and their datasets with the objective of pairing data analysis with theory or implementation. Literature review will add context and grounding to projects.

Machine Learning in Education: Read More [+]  

Rules & Requirements
Prerequisites: Suggested background includes one programming course and familiarity with one statistical/computational software package

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Information/Graduate  
Grading: Letter grade.  
Instructor: Pardos

Also listed as: EDUC C260F

INFO C262 Theory and Practice of Tangible User Interfaces 4 Units
Terms offered: Fall 2022, Fall 2021, Fall 2019
This course explores the theory and practice of Tangible User Interfaces, a new approach to Human Computer Interaction that focuses on the physical interaction with computational media. The topics covered in the course include theoretical framework, design examples, enabling technologies, and evaluation of Tangible User Interfaces. Students will design and develop experimental Tangible User Interfaces using physical computing prototyping tools and write a final project report.

Theory and Practice of Tangible User Interfaces: Read More [+]  

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

INFO C263 Technologies for Creativity and Learning 3 Units
Terms offered: Fall 2020, Spring 2015, Spring 2014
How does the design of new educational technology change the way people learn and think? How do we design systems that reflect our understanding of how we learn? This course explores issues on designing and evaluating technologies that support creativity and learning. The class will cover theories of creativity and learning, implications for design, as well as a survey of new educational technologies such as works in computer supported collaborative learning, digital manipulatives, and immersive learning environments.

Technologies for Creativity and Learning: Read More [+]  

Rules & Requirements
Credit Restrictions: Students will receive no credit for INFO C263 after completing NW MEDIA 290, or INFO 290.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of seminar per week

Subject/Course Level: Information/Graduate  
Grading: Letter grade.  
Instructor: Ryokai

Also listed as: NW MEDIA C263

INFO C265 Interface Aesthetics 3 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
This course will cover new interface metaphors beyond desktops (e.g., for mobile devices, computationally enhanced environments, tangible user interfaces) but will also cover visual design basics (e.g., color, layout, typography, iconography) so that we have systematic and critical understanding of aesthetically engaging interfaces. Students will get a hands-on learning experience on these topics through course projects, design critiques, and discussions, in addition to lectures and readings.

Interface Aesthetics: Read More [+]

INFO 271B Quantitative Research Methods for Information Systems and Management 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
Introduction to many different types of quantitative research methods, with an emphasis on linking quantitative statistical techniques to real-world research methods. Introductory and intermediate topics include: defining research problems, theory testing, causal inference, probability, and univariate statistics. Research design and methodology topics include: primary/secondary survey data analysis, experimental designs, and coding qualitative data for quantitative analysis.

Quantitative Research Methods for Information Systems and Management:

INFO 281 Designing Against Hate: An Exploration of Speech and Affordances on Social Media 2 Units
Terms offered: Spring 2020
Civil society and governments across the world continue to push social media platforms for increased responsiveness to concerns about the abuse of technology. Recent nationally representative surveys reveal a widening trust deficit between the public and private technology companies. This has led to a growing job market for technology policy professionals that can help companies navigate complex issues related to online hate and harassment, and for engineers who understand user-needs for vulnerable communities. This course will provide an opportunity for UC Berkeley graduate students to engage in lectures and guided design exercises aimed at improving the affordances of social media platforms with regard to civil and respectful discourse.

Designing Against Hate: An Exploration of Speech and Affordances on Social Media:
Read More [+]

Objectives & Outcomes
Student Learning Outcomes: Explore relevant laws, policies, and community guidelines that govern speech and conduct on the internet. Gain a theoretical and practical understanding of the need for employing design principles to prevent social media platforms from being abused by users. Test relevant design principles on existing case studies and potentially on their own software UX and UI designs. Understand the different ways that social media platforms can and have been abused by bad actors, with a focus on the various forms of hate and harassment.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

INFO 287 Entrepreneurship: New Venture Discovery 3 Units
Terms offered: Fall 2022, Spring 2022, Spring 2021  
New Venture Discovery introduces students to the process of launching an information-intensive venture—a social enterprise, business startup, or venture inside an established organization. It is motivated by the recognition that new enterprises fail more often from lack of customers than flaws in technology or product development. The course takes an iterative, design-oriented and feedback-driven approach to the search process: identifying a problem or need to address, developing a prototype, discovering customers, refining the concept, testing and validating demand, and developing a sustainable business model.  
Entrepreneurship: New Venture Discovery: Read More [+]

INFO 288 Big Data and Development 3 Units
Terms offered: Spring 2021, Spring 2019  
As new sources of digital data proliferate in developing economies, there is the exciting possibility that such data could be used to benefit the world’s poor. Through a careful reading of recent research and through hands-on analysis of large-scale datasets, this course introduces students to the opportunities and challenges for data-intensive approaches to international development. Students should be prepared to dissect, discuss, and replicate academic publications from several fields including development economics, machine learning, information science, and computational social science. Students will also conduct original statistical and computational analysis of real-world data.  
Big Data and Development: Read More [+]  
Rules & Requirements  
Prerequisites: Students are expected to have prior graduate training in machine learning, econometrics, or a related field

INFO 289 Public Interest Cybersecurity: The Citizen Clinic Practicum 3 Units
Terms offered: Fall 2022, Spring 2022, Spring 2021  
This course provides students with real-world experience assisting politically vulnerable organizations and persons around the world to develop and implement sound cybersecurity practices. In the classroom, students study basic theories and practices of digital security, intricacies of protecting largely under-resourced organizations, and tools needed to manage risk in complex political, sociological, legal, and ethical contexts. In the clinic, students work in teams supervised by Clinic staff to provide direct cybersecurity assistance to civil society organizations. We emphasize pragmatic, workable solutions that take into account the unique needs of each partner organization.

**INFO 290TA Information Organization Laboratory 3 Units**

Terms offered: Fall 2016, Spring 2016, Fall 2015
Students will build tools to explore and apply theories of information organization and retrieval. Students will implement various concepts covered in the concurrent 202 course through small projects on topics like controlled vocabularies, the semantic web, and corpus analysis. We will also experiment with topics suggested by students during the course. Students will develop skills in rapid prototyping of web-based projects using Python, XML, and jQuery.

**Rules & Requirements**

Prerequisites: It is recommended that students take 202 concurrently, or have taken it in the past

**Hours & Format**

Fall and/or spring: 15 weeks - 3 hours of lecture per week

INFO 293 Information Management Practicum
0.5 Units
Terms offered: Fall 2016, Summer 2016 10 Week Session, Spring 2016
This course is designed to help School of Information graduate students maximize their internship, practicum, or independent research experiences.
Information Management Practicum: Read More [+]

Objectives & Outcomes

Course Objectives: Experience the practical application of your academic knowledge to real-world professional contexts;
Gain insight into an organization and how one might make a valuable contribution;
Reflect on the information the experience has provided, to see if it fits within one’s personal value set and work/life manifests.
Try out various professional activities to see when you are in ‘flow’;

Student Learning Outcomes: Assess the organizational culture of a company, governmental body, or non-governmental organization
Connect academic knowledge about information management to real-world professional contexts
Evaluate the effectiveness of a variety of information science techniques when deployed in organizational situations
Integrate the student's own individual professional goals with the organization's needs relevant to the internship or practicum
Reflect critically on the internship or practicum experience

Rules & Requirements

Prerequisites: Consent of a Head Graduate Adviser for the School of Information
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Fall and/or spring: 15 weeks - 1 hour of internship per week
Summer: 10 weeks - 1.5 hours of internship per week

Additional Details
Subject/Course Level: Information/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.

INFO 294 Doctoral Research and Theory Workshop 2 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
An intensive weekly discussion of current and ongoing research by Ph.D. students with a research interest in issues of information (social, legal, technical, theoretical, etc.). Our goal is to focus on critiquing research problems, theories, and methodologies from multiple perspectives so that we can produce high-quality, publishable work in the interdisciplinary area of information research. Circulated material may include dissertation chapters, qualifying papers, article drafts, and/or new project ideas. We want to have critical and productive discussion, but above all else we want to make our work better: more interesting, more accessible, more rigorous, more theoretically grounded, and more like the stuff we enjoy reading.
Doctoral Research and Theory Workshop: Read More [+]

Rules & Requirements

Prerequisites: PhD students only
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of workshop per week

Additional Details
Subject/Course Level: Information/Graduate
Grading: Letter grade.
Instructor: Cheshire
