INTEGBI 11 California Natural History 3 Units
Terms offered: Fall 2021, Fall 2020
An introduction to the biomes, plants, and animals of California. The lectures will introduce natural history as the foundation of the sciences, with an overview of geology, paleontology, historical biology, botany, zoology, ecosystem ecology, and conservation biology. The field labs will include activities on the UC Berkeley campus and around the Bay Area. Course is open to all students without prerequisite and will provide a foundation for advanced study in biology and field biology. California Natural History: Read More [+]

Objectives & Outcomes

Course Objectives: Create detailed natural history observations with georeferenced photos and videos
Enjoy local ecosystems and museum collections as sources of study and inspiration
Identify the common organisms in your community with colloquial and scientific names
Produce sophisticated observations of organismal behavior and ecosystem processes
Synthesize your observations into comprehensive species lists for specific geographic areas
Understand the relationship between history, climate, and species composition in California

Rules & Requirements

Credit Restrictions: Students will receive no credit for INTEGBI 11 after completing INTEGBI W11. A deficient grade in INTEGBI 11 may be removed by taking INTEGBI W11.

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
California Natural History: Read Less [-]

INTEGBI W11 California Natural History History 4 Units
Terms offered: Prior to 2007
An introduction to the biomes, plants, and animals of California. Course is open to all students without prerequisite and will provide a foundation for advanced study in biology and field biology. Students will have the flexibility to choose their own adventure within the fields of geology, botany, and zoology, with possible emphases in paleontology, historical ecology, morphology, animal behavior, ecosystem ecology, or conservation biology. Fieldwork is a requirement and may be conducted remotely. There will be special field and lab opportunities available in the Bay Area and on the UC Berkeley campus for students who can attend. California Natural History: Read More [+]

Hours & Format

Summer: 8 weeks - 6 hours of web-based lecture, 4 hours of fieldwork, and 2 hours of web-based discussion per week

Online: This is an online course.

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
California Natural History: Read Less [-]

INTEGBI C13 Origins: from the Big Bang to the Emergence of Humans 4 Units
Terms offered: Fall 2018, Fall 2016, Fall 2014
This course will cover our modern scientific understanding of origins, from the Big Bang to the formation of planets like Earth, evolution by natural selection, the genetic basis of evolution, and the emergence of humans. These ideas are of great intrinsic scientific importance and also have far reaching implications for other aspects of people's lives (e.g., philosophical, religious, and political). A major theme will be the scientific method and how we know what we know.
Origins: from the Big Bang to the Emergence of Humans: Read More [+]

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of discussion per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructors: Marshall, Quataert
Also listed as: ASTRON C13
Origins: from the Big Bang to the Emergence of Humans: Read Less [-]
INTEGBI 24 Freshman Seminars 1 Unit
Terms offered: Fall 2021, Spring 2021, Fall 2020
The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.
Freshman Seminars: Read More [+]

Rules & Requirements
Repeat rules: Course may be repeated for credit when topic changes.

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of seminar per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate

Grading/Final exam status: The grading option will be decided by the instructor when the class is offered. Final Exam To be decided by the instructor when the class is offered.

Freshman Seminars: Read Less [-]

INTEGBI 31 The Ecology and Evolution of Animal Behavior 3 Units
Terms offered: Summer 2021 8 Week Session, Summer 2020 8 Week Session, Summer 2019 8 Week Session
Principles of evolution biology as they relate to animal behavior and behavioral ecology with broad coverage of animal groups. Special attention will be paid to the emerging discipline of behavioral ecology.
The Ecology and Evolution of Animal Behavior: Read More [+]

Rules & Requirements
Prerequisites: Open to all students; designed for those not specializing in biology

Credit Restrictions: Students will receive no credit for Integrative Biology 31 after taking Integrative Biology 144, C144 or Psychology C115B.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture, 1 hour of demonstration, and 1 hour of discussion per week

Summer:
6 weeks - 5 hours of lecture, 5 hours of demonstration, and 5 hours of discussion per week
8 weeks - 4 hours of lecture, 2 hours of demonstration, and 2 hours of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Instructor: Full
Formerly known as: Integrative Biology 32
Also listed as: L & S C30Z

Bioinspired Design: Read Less [-]

INTEGBI C32 Bioinspired Design 3 Units
Terms offered: Spring 2021, Spring 2020, Spring 2019
Bioinspired design views the process of how we learn from Nature as an innovation strategy translating principles of function, performance and aesthetics from biology to human technology. The creative design process is driven by interdisciplinary exchange among engineering, biology, art, architecture and business. Diverse teams of students will collaborate on, create, and present original bioinspired design projects. Lectures discuss biomimicry, challenges of extracting principles from Nature, scaling, robustness, and entrepreneurship through case studies highlighting robots that run, fly, and swim, materials like gecko-inspired adhesives, artificial muscles, medical prosthetic devices, and translation to start-ups.
Bioinspired Design: Read More [+]

Rules & Requirements
Prerequisites: Open to all students

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

INTEGBI 33 Topics in Paleontology: The Age of Dinosaurs 3 Units
Terms offered: Fall 2013, Fall 2012, Fall 2010
Open without prerequisite to all students and designed for those not specializing in paleontology. Evolution, history, and ecology of the dinosaurs and their world, including the earliest mammals and birds. Topics in Paleontology: The Age of Dinosaurs: Read More [+]

Rules & Requirements

Credit Restrictions: Students will receive no credit for Integrative Biology 33 after taking Integrative Biology 144, C144 or Psychology C115B.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Summer:
6 weeks - 8 hours of lecture per week
8 weeks - 6 hours of lecture per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Topics in Paleontology: The Age of Dinosaurs: Read Less [-]
INTEGBI N33 Topics in Paleontology: The Age of Dinosaurs 2 Units
Terms offered: Summer 1996 10 Week Session
Open without prerequisite to all students and designed for those not specializing in paleontology. Evolution history, and ecology of the dinosaurs and their world, including the earliest mammals and birds.
Topics in Paleontology: The Age of Dinosaurs: Read More [+]

Rules & Requirements
Repeat rules: Course may be repeated for credit with instructor consent.

Hours & Format
Summer: 8 weeks - 4 hours of lecture per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

Topics in Paleontology: The Age of Dinosaurs: Read Less [-]

INTEGBI 35AC Human Biological Variation 4 Units
Terms offered: Fall 2020, Fall 2019, Summer 2019 8 Week Session
This course addresses modern human biological variation from historical, comparative, evolutionary, biomedical, and cultural perspectives. It is designed to introduce students to the fundamentals of comparative biology, evolutionary theory, and genetics.
Human Biological Variation: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week
Summer: 8 weeks - 6 hours of lecture and 2 hours of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam not required.

Instructor: Hlusko
Human Biological Variation: Read Less [-]

INTEGBI 37 Topics in Paleontology: The Antecedents of Man 3 Units
Terms offered: Prior to 2007
Open without prerequisite to all students and designed for those not specializing in paleontology. Survey the evolution, ecology, and history of the primate order. Special emphasis will be given to primate origins, geographic distribution, and the evolution of the human lineage.
Topics in Paleontology: The Antecedents of Man: Read More [+]

Hours & Format
Summer: 8 weeks - 3 hours of lecture and 2 hours of laboratory per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam not required.

Topics in Paleontology: The Antecedents of Man: Read Less [-]

INTEGBI 39C Topics in Integrative Biology 2 Units
Terms offered: Spring 2013, Spring 2012, Spring 2011
Reading and discussion of the literature on particular topics in the field of integrative biology. Term paper and oral presentation. Section topics will vary from semester to semester. Students should check with department secretary for each semester's offerings.
Topics in Integrative Biology: Read More [+]

Rules & Requirements
Prerequisites: Preferentially open to freshmen; consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Offered for pass/not pass grade only. Final exam required.

Topics in Integrative Biology: Read Less [-]
INTEGBI 41 Marine Mammals 2 Units
Terms offered: Fall 2021, Summer 2021 8 Week Session, Summer 2020 8 Week Session
A survey of marine mammal evolution, biology, behavior, ecology, and politics with a concentration on those species found in the North Pacific. Coverage would include: origin and evolution of cetaceans, pinnipeds, sirenians, and sea otters; basic biology and anatomy of marine mammal groups, and North Pacific species in particular; ecological interactions and role in nearshore and pelagic marine communities; and interactions between humans and marine mammals.
Marine Mammals: Read More [+]

Rules & Requirements
Prerequisites: Designed for those not specializing in Integrative Biology

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week
Summer: 6 weeks - 5 hours of lecture per week
8 weeks - 4 hours of lecture per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

INTEGBI 42 Primate Biology 3 Units
Terms offered: Summer 1996 10 Week Session
An introduction to the order of mammals of which we are members. The niches of primates in modern ecosystems, their anatomical and behavioral specialization, and their role as indicator species in conservation. The mechanisms and variety of primate social organization compared with that of other animals.
Primate Biology: Read More [+]

Rules & Requirements
Credit Restrictions: Open to all students but designed for those not specializing in biology.

Hours & Format
Summer: 8 weeks - 6 hours of lecture per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

INTEGBI 43 What Lives Inside Us?
Microbiomes and Symbiosis 4 Units
Terms offered: Not yet offered
We live in a microbial world, and the evolution of multicellular organisms has been intimately affected by microbes. Their influences range from mutualistic benefits to disease and represent a fundamental force that shapes plant and animal phenotypes and evolutionary trajectories. Recent advances in genomic methodologies have further increased our appreciation of the role of microbes in host health and fitness by unraveling the commonness of microbial communities in all organisms and their complex interactions with their hosts. This course will consider the broad range of host-microbe interactions and underlying mechanisms – from mutualism to pathogenesis, and from binary host-microbe interactions, to the microbiome.
What Lives Inside Us? Microbiomes and Symbiosis: Read More [+]

Rules & Requirements
Credit Restrictions: Students will receive no credit for INTEGBI 43 after completing INTEGBI 118.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Shapira

INTEGBI 51 Origins and Evolution of Food Plants 3 Units
Terms offered: Not yet offered
The course will review major groups of food plants from an evolutionary and historical perspective, by examining the origins from wild relatives to current distribution and varieties today. Examples will be reviewed from a diversity of crops from around the world, such as grains, pulses, vegetables, fruits, nuts and others (e.g., caffeine-producing plants). General concepts covered will include plant morphology, evolutionary processes (domestication, hybridization, polyploidy, diversification) and relevant ecology (e.g., pollination biology, pest and pest control). Focus will include California agriculture and crops as illustrated through field trips.
Origins and Evolution of Food Plants: Read More [+]

Hours & Format
Summer: 8 weeks - 4 hours of lecture per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Harris
Origins and Evolution of Food Plants: Read Less [-]
INTEGBI 77A Integrative Human Biology 1
Unit
Terms offered: Fall 2021, Fall 2020, Fall 2019
Each week a different Integrative Biology faculty member will give a one hour lecture on how their research field contributes to our understanding of human biology. The integration of the disciplines of evolution, ecology, paleontology, comparative physiology, and comparative anatomy in the study of how humans function in ecosystems illuminates our understanding of human biology. During each presentation, the faculty member will also inform students about IB courses they teach, research in their lab, and which Berkeley Natural History Museum they may be affiliated with. This course gives undergraduates an opportunity to learn about the spectrum of research and courses offered by the different IB faculty.

Rules & Requirements

Credit Restrictions: 77A and 77B may each be taken once for credit. Majors are required to take at least one semester of 77A OR 77B.

Hours & Format

Fall and/or spring: 15 weeks - 1 hour of seminar per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate

Grading/Final exam status: Offered for pass/not pass grade only. Final exam required.

Instructor: Carlson

INTEGBI 77B Integrative Human Biology 1
Unit
Terms offered: Spring 2021, Spring 2020, Spring 2019
Each week a different Integrative Biology faculty member will give a one hour lecture on how their research field contributes to our understanding of human biology. The integration of the disciplines of evolution, ecology, paleontology, comparative physiology, and comparative anatomy in the study of how humans function in ecosystems illuminates our understanding of human biology. During each presentation, the faculty member will also inform students about IB courses they teach, research in their lab, and which Berkeley Natural History Museum they may be affiliated with. This course gives undergraduates an opportunity to learn about the spectrum of research and courses offered by the different IB faculty.

Rules & Requirements

Credit Restrictions: 77A and 77B may each be taken once for credit. Majors are required to take at least one.

Hours & Format

Fall and/or spring: 15 weeks - 1 hour of seminar per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate

Grading/Final exam status: Offered for pass/not pass grade only. Final exam required.

Instructor: Carlson
INTEGBI 84 Sophomore Seminar 1 or 2 Units
Terms offered: Fall 2021, Spring 2021, Fall 2020
Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.

Sophomore Seminar: Read More [+]

Rules & Requirements

Prerequisites: At discretion of instructor

Repeat rules: Course may be repeated for credit when topic changes.

Hours & Format

Fall and/or spring:
5 weeks - 3-6 hours of seminar per week
10 weeks - 1.5-3 hours of seminar per week
15 weeks - 1-2 hours of seminar per week

Summer:
6 weeks - 2.5-5 hours of seminar per week
8 weeks - 1.5-3.5 hours of seminar and 2-4 hours of seminar per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate

Grading/Final exam status: The grading option will be decided by the instructor when the class is offered. Final Exam To be decided by the instructor when the class is offered.

Sophomore Seminar: Read Less [-]

INTEGBI 87 Introduction to Research Methods in Biology 2 Units
Terms offered: Summer 2014 8 Week Session, Summer 2013 8 Week Session, Summer 2012 8 Week Session
This course provides a functional understanding of hypothesis/data driven research and exposure to current approaches and methods in biological science. The lectures address foundational concepts of the scientific method, research ethics, scientific communication, and how to understand scientific literature. The labs provide exposure to faculty research and experimental methods. The course is geared to incoming freshmen, sophomores, and transfer students interested in learning more about research.

Introduction to Research Methods in Biology: Read More [+]

Rules & Requirements

Prerequisites: Consent of instructor

Hours & Format

Summer: 8 weeks - 1 hour of lecture, 1 hour of discussion, and 3 hours of laboratory per week

INTEGBI 88 Leadership Communications for Biology Scholars 1 Unit
Terms offered: Fall 2009, Fall 2008, Fall 2007
Leadership skills and abilities such as communication, collaboration, critical thinking, and resourcefulness are critical to academic, professional, and personal success. The need for enlightened leaders is evident in every aspect of health and science such as designing innovative health programs, obtaining funding, conducting cutting-edge research, developing and gaining support to implement policy solutions. This course provides an understanding of the principles of leadership and communications for students in the Biology Scholars Program. Students will nurture those traits in themselves and apply those principles in situations specifically related to the health and science sectors.

Leadership Communications for Biology Scholars: Read More [+]

Rules & Requirements

Prerequisites: Acceptance into Biology Scholars Program

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

Instructors: Hayes, Kim, Myrick

Leadership Communications for Biology Scholars: Read Less [-]
INTEGBI 95 Special Research Project in Biology 1B 2 Units

Terms offered: Spring 2017, Fall 2016, Spring 2016
Students enrolled in Biology 1B can participate in special field research in addition to attending regular laboratory sections. Students work independently with minimal supervision. Students will learn how to develop a project, collect and record data, conduct and analyze experiments, write a report, and make an oral presentation. Project may require traveling to off-campus sites, and may include night or weekend work.

Special Research Project in Biology 1B: Read More [+]

Rules & Requirements

Prerequisites: Consent of instructor; selected by interview

Hours & Format

Fall and/or spring: 15 weeks - 4 hours of fieldwork and 2 hours of discussion per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Offered for pass/not pass grade only. Final exam not required.

Special Research Project in Biology 1B: Read Less [-]

INTEGBI 95B Lawrence Hall of Science Teaching Assistant 1 - 2 Units

Terms offered: Prior to 2007
Enrollment into this course is for students interested in teaching science to children under the guidance of the Lawrence Hall of Science Instructors and Staff. As a LHS Teaching Assistant (TA), you will have the opportunity to assist with workshops serving grade school-aged children and to lead small discussion groups. The workshops consist of organismal biology related materials. You will undergo training in the Hall's Animal Discovery Room to ensure that you are prepared to support school and public programs scheduled in that space. There will also be opportunities to travel to nearby school districts to give presentations on the materials you work with.

Lawrence Hall of Science Teaching Assistant: Read More [+]

Rules & Requirements

Prerequisites: Students must be concurrently enrolled or have completed Biology 1B
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format

Fall and/or spring: 15 weeks - 3-6 hours of fieldwork per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Offered for pass/not pass grade only. Final exam not required.

Lawrence Hall of Science Teaching Assistant: Read Less [-]

INTEGBI C96 Studying the Biological Sciences 1 Unit

Terms offered: Fall 2021, Fall 2020, Fall 2019
Students will be introduced to the “culture” of the biological sciences, along with an in-depth orientation to the academic life and the culture of the university as they relate to majoring in biology. Students will learn concepts, skills, and information that they can use in their major courses, and as future science professionals.

Studying the Biological Sciences: Read More [+]

Rules & Requirements

Prerequisites: Consent of instructor

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details

INTEGBI 98 Directed Group Study 1 - 4 Units

Terms offered: Fall 2021, Spring 2021, Fall 2020
Lectures and small group discussions focusing on topics of interest, varying from semester to semester.

Directed Group Study: Read More [+]

Rules & Requirements

Prerequisites: Freshmen and sophomores only
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format

Fall and/or spring: 15 weeks - 1-4 hours of directed group study per week
Summer:
6 weeks - 2.5-10 hours of directed group study per week
8 weeks - 1.5-7.5 hours of directed group study per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Offered for pass/not pass grade only. Final exam not required.

Directed Group Study: Read Less [-]
INTEGBI 98BC Berkeley Connect 1 Unit
Terms offered: Fall 2021, Spring 2021
Berkeley Connect is a mentoring program, offered through various academic departments, that helps students build intellectual community. Over the course of a semester, enrolled students participate in regular small-group discussions facilitated by a graduate student mentor (following a faculty-directed curriculum), meet with their graduate student mentor for one-on-one academic advising, attend lectures and panel discussions featuring department faculty and alumni, and go on field trips to campus resources. Students are not required to be declared majors in order to participate.

Berkeley Connect: Read More [+]

Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

Principles of Biodiversity: Read Less [-]

INTEGBI C100 Communicating Ocean Science 4 Units
For undergraduates interested in improving their ability to communicate their scientific knowledge by teaching ocean science in elementary schools or science centers/aquariums. The course will combine instruction in inquiry-based teaching methods and learning pedagogy with six weeks of supervised teaching experience in a local school classroom or the Lawrence Hall of Science with a partner. Thus, students will practice communicating scientific knowledge and receive mentoring on how to improve their presentations.

Communicating Ocean Science: Read More [+]

Rules & Requirements
Prerequisites: One course in introductory biology, geology, chemistry, physics, or marine science required and interest in ocean science; junior, senior, or graduate standing; consent of instructor required for sophomores

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of fieldwork per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

INTEGBI 101 Introduction to Scientific Writing 4 Units
Terms offered: Spring 2020, Spring 2019, Spring 2018
This course will introduce students to concepts and techniques for effective communication of scientific findings, both within the scientific community and to the general public. Students will be exposed to a variety of formats, including systematic observations in field journals, proposals, conference presentations, seminars, journal articles, popular science writing, and interviews. Students can expect to gain a sense of confidence in writing and public speaking about research. Direct language is valued in scientific writing, but creative approaches to style and structure will be emphasized.

Introduction to Scientific Writing: Read More

Hours & Format
Fall and/or spring: 15 weeks - 4 hours of seminar per week

INTEGBI 106A Physical and Chemical Environment of the Ocean 4 Units
Terms offered: Spring 2012, Spring 2010, Spring 2008

Physical and Chemical Environment of the Ocean: Read More [+]

Rules & Requirements
Prerequisites: Biology 1B; Chemistry 1A or 4A; Mathematics 1A or 16A; Physics 7A or 8A. Recommended: Integrative Biology 82

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

INTEGBI C107L Principles of Plant Morphology with Laboratory 4 Units
Terms offered: Spring 2019, Fall 2017, Fall 2016
An analysis of the structural diversity of land plants with emphasis on the developmental mechanisms responsible for this variation in morphology and the significance of this diversity in relation to adaptation and evolution.

Principles of Plant Morphology with Laboratory: Read More [+]

Rules & Requirements
Prerequisites: Biology 1A-1B

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture, 1 hour of discussion, and 4 hours of laboratory per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Specht
Also listed as: PLANTBI C107L

INTEGBI 108 Marine Biology 4 Units
Terms offered: Summer 2021 8 Week Session, Summer 2020 8 Week Session, Summer 2019 8 Week Session
This course will focus on the interactions among marine organisms and on their relationship to the environment. Topics will include an overview of marine organisms, functioning of marine ecosystems, anthropogenic impacts, and conservation. Lectures will consist of discussions of primary literature, videos, and student presentations; and discussion sections will review and expand on topics covered on lecture. By the end of the course, you should be able to compare marine ecosystems, identify the major marine organisms and explain their role within a community, explain the main abiotic factors affecting the distribution of marine organisms, and discuss the impacts that humans are imposing on the marine environment.

Marine Biology: Read More [+]

Rules & Requirements
Prerequisites: Biology 1B

Hours & Format
Fall and/or spring: 15 weeks - 4 hours of lecture and 1 hour of discussion per week
Summer: 8 weeks - 8 hours of lecture and 2 hours of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

Marine Biology: Read Less [-]
INTEGBI C109 Evolution and Ecology of Development 3 Units
Terms offered: Fall 2019, Fall 2018, Fall 2016
From the seahorse’s body to the venus flytrap’s jaws to the human brain, nature abounds with amazing adaptations. This interdisciplinary course explores how and why such biodiversity evolves as well as what limits diversity. Lectures and case studies will focus on core concepts, recent advances, and integrative approaches, placing special emphasis on the interplay between gene regulatory networks, the environment, and population genetics.

Evolution and Ecology of Development: Read More [+]

Objectives & Outcomes

Student Learning Outcomes:
• Explain how an interdisciplinary approach involving genetics, development, evolutionary biology, and ecology can be used to understand the processes that generate patterns of biodiversity.
• List and describe major questions, findings, and experimental approaches in the field of ecological and evolutionary developmental biology.
• Discuss biological research using specialized terminology and defend your opinions.
• Critically evaluate and interpret the primary scientific literature.
• Combine factual material with deductive reasoning to propose hypotheses and future research directions

Rules & Requirements

Prerequisites: BIOLOGY 1A and 1B

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate

Grading/Final exam status: Letter grade. Alternative to final exam.

Instructor: Blackman

Also listed as: PLANTBI C109

Evolution and Ecology of Development: Read Less [-]

INTEGBI C110L Biology of Fungi with Laboratory 4 Units
Terms offered: Fall 2021, Fall 2020, Fall 2016
Selected aspects of fungi: their structure, reproduction, physiology, ecology, genetics and evolution; their role in plant disease, human welfare, and industry. Offered even fall semesters.

Biology of Fungi with Laboratory: Read More [+]

Rules & Requirements

Prerequisites: Biology 1B

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture and 6 hours of laboratory per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

Instructors: Bruns, Taylor

Also listed as: PLANTBI C110L

Biology of Fungi with Laboratory: Read Less [-]

INTEGBI 112 Horticultural Methods in the Botanical Garden 1 Unit
Terms offered: Fall 2021, Spring 2020, Fall 2019
An introduction to horticultural techniques utilizing the diverse collections of the University Botanical Garden.

Horticultural Methods in the Botanical Garden: Read More [+]

Rules & Requirements

Prerequisites: Consent of instructor

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of fieldwork per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate

Grading/Final exam status: Offered for pass/not pass grade only. Final exam not required.

Instructor: Licht

Formerly known as: 112L

Horticultural Methods in the Botanical Garden: Read Less [-]
**INTEGBI 113L Paleobiological Perspectives on Ecology and Evolution 4 Units**

Terms offered: Spring 2021, Spring 2020, Spring 2019

This course will center around answering the following questions: What do the fossil and geologic records have to tell us about the nature of ecological and evolutionary processes? What do they teach us that cannot be learned from the living world alone? In answering these questions, the course will provide an introduction to the analysis of key problems in paleobiology, with an emphasis on how evolutionary and ecological processes operate on geologic timescales.

**Rules & Requirements**

**Prerequisites:** Prior biology experience, or consent of instructor. No paleontological or geological background required

**Hours & Format**

Fall and/or spring: 15 weeks - 3 hours of lecture and 3 hours of laboratory per week

**Additional Details**

**Subject/Course Level:** Integrative Biology/Undergraduate

**Grading/Final exam status:** Letter grade. Final exam required.

**Instructor:** Marshall

**Formerly known as:** 108

Paleobiological Perspectives on Ecology and Evolution: Read More [+]

---

**INTEGBI 114 Infectious Disease Dynamics 4 Units**

Terms offered: Summer 2021 8 Week Session, Spring 2021, Summer 2020 8 Week Session

Many of the challenges of managing infectious disease are essentially ecological and evolutionary problems. Disease follows the rules of species interactions as it spreads through host populations while resistance to antibiotics occurs through the rules of evolutionary biology. The key aim of the module is to teach ecological and evolutionary principles in the light of infectious diseases affecting human populations and societies as well as agriculture and wildlife. This is applied ecology and applied evolution writ large.

**Objectives & Outcomes**

**Student Learning Outcomes:**
- Understanding the role of infectious disease in natural populations and communities
- Understand the role of disease in shaping human agriculture and societies
- Describe how infectious disease may be important in conservation
- Discuss when parasite virulence makes sense in the light of evolution
- Explain how to apply ecological and evolutionary principles to the treatment and control of infectious diseases
- Present a scientific poster on the evidence for coevolution between a pair of species.

**Rules & Requirements**

**Prerequisites:** Bio 1A and Bio 1B or equivalent required, Ecology or Evolution course suggested

**Hours & Format**

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Summer: 8 weeks - 5 hours of lecture and 2 hours of discussion per week

**Additional Details**

**Subject/Course Level:** Integrative Biology/Undergraduate

**Grading/Final exam status:** Letter grade. Final exam required.

**Instructor:** Boots

Infectious Disease Dynamics: Read Less [-]
INTEGBI 115 Introduction to Systems in Biology and Medicine 4 Units
Terms offered: Spring 2015, Spring 2014, Fall 2013
This course is aimed at students wishing to understand the general principles of how biological systems operate. Topics include feedback regulation; competition and cooperation; genetic switches and circuits; random processes; chaos; mechanisms for error correction; and the properties of networks. Examples are selected from many fields including medicine, physiology, ecology, biochemistry, cell biology, and genetics. Students will learn to conceptualize and quantify interactions within biological systems using simple mathematical models and computer programs. No previous experience in programming is required.

INTEGBI 116L Medical Parasitology 4 Units
Terms offered: Summer 2021 First 6 Week Session, Summer 2020 First 6 Week Session
This course includes the biology, epidemiology, pathogenesis, treatment, and prevention of various medically important parasitic infections. Life cycles of parasitic helminths and protozoa, the biological aspects of the host-parasite relationship, the epidemiology of the infection, and the interplay of social, economical, and ecological factors which contribute to the disease will be covered in both lectures and videos.

INTEGBI 117 Medical Ethnobotany 2 Units
Terms offered: Fall 2021, Fall 2020, Fall 2019
Biological diversity and ethno-linguistic diversity sustain traditional botanical medicine systems of the world. Major topics covered in this course include cultural origins of medicinal plant knowledge on plant-derived pharmaceuticals and phytomedicines; field research methods in ethnobotany and ethnopharmacology; examples of how traditional botanical medicines provide safe, effective, affordable, and sustainable primary health care to tropical countries; human physiology, human diseases, and mechanisms of action of plant-derived drugs.

INTEGBI 117LF Medical Ethnobotany Laboratory 2 Units
Terms offered: Fall 2021, Fall 2020, Fall 2019
Laboratory will focus on studying medicinal plants from the major ecosystems and geographical regions of the world. Students will learn common names, scientific names, plant families, field identification, habitats, and ethnomedical uses of medicinal plants. How the medicinal plant is prepared, administered, and used as a phytomedicine will also be discussed. There will be reference to the phylogenetic relationships between the plant families and genera represented by the medicinal plants.
INTEGBI 118 Organismal Microbiomes and Host-Pathogen Interactions 4 Units
Terms offered: Fall 2021, Fall 2020, Fall 2019
We live in a microbial world, and microbes have shaped (and continue to shape) plant and animal physiology and evolution through a myriad of contributions – from mutualistic benefits to disease. Recent advances in genomic methodologies have further increased our appreciation of such contributions by highlighting the prevalence of organismal microbial communities and their complex interactions with their hosts. Through lectures and discussions, IB 118 will consider the broad range of host-microbe interactions – from mutualism to pathogenesis, and from pairwise interactions to the microbiome - learning the principles that shape these interactions, the technologies used to interrogate them and the molecular mechanisms underlying them.
Organismal Microbiomes and Host-Pathogen Interactions; Read More [+]

Rules & Requirements
Prerequisites: Biology 1A-1B

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Shapira
Organismal Microbiomes and Host-Pathogen Interactions; Read Less [-]

INTEGBI 119 Evaluating Scientific Evidence in Medicine 3 Units
Terms offered: Spring 2015, Fall 2014, Spring 2013
A course in critical analysis of medical reports and studies using recent controversial topics in medicine. Course will focus on information gathering, hypothesis testing, evaluating study design, methodological problems, mechanisms of bias, interpretation of results, statistics, and attribution of causation. Students participate in a mock trial as a way to demonstrate their abilities to gather, critically analyze, and present scientific and medical evidence.
Evaluating Scientific Evidence in Medicine; Read More [+]

Rules & Requirements
Prerequisites: Biology 1A-1B

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture, 1 hour of discussion, and 1 hour of laboratory per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: G. Caldwell
Evaluating Scientific Evidence in Medicine; Read Less [-]

INTEGBI 120 Introduction to Quantitative Methods In Biology 4 Units
Terms offered: Spring 2021, Spring 2020
This course provides a fast-paced introduction to a variety of quantitative methods used in biology and their mathematical underpinnings. While no topic will be covered in depth, the course will provide an overview of several different topics commonly encountered in modern biological research including differential equations and systems of differential equations, a review of basic concepts in linear algebra, an introduction to probability theory, Markov chains, maximum likelihood and Bayesian estimation, measures of statistical confidence, hypothesis testing and model choice, permutation and simulation, and several topics in statistics and machine learning including regression analyses, clustering, and principal component analyses.
Introduction to Quantitative Methods In Biology; Read More [+]

Objectives & Outcomes
Student Learning Outcomes: Ability to calculate means and variances for a sample and relate it to expectations and variances of a random variable.
Ability to calculate probabilities of discrete events using simple counting techniques, addition of probabilities of mutually exclusive events, multiplication of probabilities of independent events, the definition of conditional probability, the law of total probability, and Bayes’ formula, and familiarity with the use of such calculations to understand biological relationships.
Ability to carry out various procedures for data visualization in R.
Ability to classify states in discrete time Markov chains, and to calculate transition probabilities and stationary distributions for simple discrete time, finite state-space Markov chains, and an understanding of the modeling of evolutionary processes as Markov chains.
Ability to define likelihood functions for simple examples based on standard random variables.
Ability to implement simple statistical models in R and to use simple permutation procedures to quantify uncertainty.
Ability to implement standard and logistic regression models with multiple covariates in R.
Ability to manipulate matrices using multiplication and addition.
Ability to model simple relationships between biological variables using differential equations.
Ability to work in a Unix environment and manipulating files in Unix.
An understanding of basic probability theory including some of the standard univariate random variables, such as the binomial, geometric, exponential, and normal distribution, and how these variables can be used to model biological systems.
An understanding of powers of matrices and the inverse of a matrix.
An understanding of sampling and sampling variance.
An understanding of the principles used for point estimation, hypothesis testing, and the formation of confidence intervals and credible intervals. Familiarity with ANOVA and ability to implementation it in R. Familiarity with PCA, other methods of clustering, and their implementation in R.
Familiarity with basic differential equations and their solutions.
Familiarity with covariance, correlation, ordinary least squares, and interpretations of slopes and intercepts of a regression line.
Familiarity with functional programming in R and/or Python and ability to define new functions.
Familiarity with one or more methods used in machine learning/statistics such as hidden Markov models, CART, neural networks, and/or graphical models.
Familiarity with python allowing students to understand simple python scripts.
Familiarity with random effects models and ability to implement them in R.
Familiarity with the assumptions of regression and methods for investigating the assumptions using R.
INTEGBI 123AL Exercise and Environmental Physiology with Laboratory 5 Units
Terms offered: Fall 2021, Fall 2019, Fall 2018
Discussion of how chemical energy is captured within cells and how potential chemical energy is converted to muscular work. Energetics, direct and indirect calorimetry, pathways of carbon flow in exercise, ventilation, circulation, skeletal muscle fiber types. Laboratory component of the course is to obtain practical experience in the measurement of physiological parameters and to be able to compile, compare, contrast, and interpret physiological data. Laboratory demonstrations and exercises will explain lecture content.

INTEGBI C125L Introduction to the Biomechanical Analysis of Human Movement 4 Units
Terms offered: Fall 2016, Fall 2015, Fall 2014, Fall 2013
Basic biomechanical and anatomical concepts of human movement and their application to fundamental movement patterns, exercise, and sport skills.

INTEGBI 127L Motor Control with Laboratory 3 Units
Terms offered: Fall 2014, Fall 2013, Fall 2012
Neural control of movement in humans and other animals. Lectures introduce basic theories of information and control, analyze motor control at the spinal level, survey anatomy and physiology of motor systems of the brain, and synthesize theory and physiology to understand control systems that regulate posture, locomotion, and voluntary movements. In laboratories, students learn theory and motor physiology hands-on, and design and perform independent investigations.
INTEGBI 128 Sports Medicine 3 Units
Terms offered: Summer 2021 First 6 Week Session, Summer 2020 First 6 Week Session, Summer 2019 First 6 Week Session
Survey course of sports medicine including topics of athletic injury (cause, evaluation, and treatment options), exercise physiology, exercise and health, fitness testing, issues specific to female athletes, drug abuse in sports, environmental issues (heat, altitude, sun exposure), nutrition, careers in sports medicine, introduction to clinical research.
Sports Medicine: Read More [+]

Rules & Requirements
Prerequisites: Background in anatomy, physiology, or exercise physiology recommended

Hours & Format
Summer:
6 weeks - 5 hours of lecture and 2 hours of discussion per week
8 weeks - 5 hours of lecture and 2 hours of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: McLaughlin
Sports Medicine: Read Less [-]

INTEGBI C129L Human Physiological Assessment 3 Units
Terms offered: Spring 2020, Spring 2019, Spring 2018
Principles and theories of human physiological assessment in relation to physical activity and conditioning. Performance of laboratory procedures in the measurement and interpretation of physiological fitness (cardiorespiratory endurance, body composition, musculoskeletal fitness).
Human Physiological Assessment: Read More [+]

Objectives & Outcomes
Student Learning Outcomes:
1. A comparative approach will allow students to gain experience in observing similarities and differences among taxa and identifying trends in vertebrate form and function. This will allow them to further their understanding of how both evolutionary and environmental contexts influence morphology and function.
2. Students will improve their understanding of the scientific method, particularly through the independent research experience provided during the term paper and project.
3. Students will gain factual knowledge of terms and concepts regarding vertebrate anatomy and functional morphology.

Rules & Requirements
Prerequisites: Biology 1B

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 6 hours of laboratory per week
Summer: 8 weeks - 6 hours of lecture and 12 hours of laboratory per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Johannessen
Also listed as: PHYS ED C129
Human Physiological Assessment: Read Less [-]

INTEGBI 130L Comparative Vertebrate Anatomy & Functional Morphology 4 Units
Terms offered: Spring 2000, Spring 1998, Fall 1995
This course is an in-depth look at the biology of form and function. We will examine anatomy and compare features among fish, amphibians, reptiles, birds, and mammals (including humans) to understand how structures develop, how they have evolved, and how they interact with one another to allow animals to live in a variety of environments. We will study the integration of the skeletal, muscular, nervous, vascular, respiratory, digestive, endocrine, and urogenital systems to explore the historical and present diversity of vertebrate animals.
Comparative Vertebrate Anatomy & Functional Morphology: Read More [+]

INTEGBI 132 Survey of Human Physiology 4 Units
Terms offered: Spring 2021, Spring 2020, Spring 2019
Mechanisms by which key physiological priorities are maintained in healthy humans. From a basis in elementary theories of information and control, we develop an understanding of homeostasis of cellular composition, structure, and energy metabolism. We then study neural and endocrine signaling in humans, and develop the key concepts of control and homeostasis in all the major organ and multi-organ systems, including cardiovascular, respiratory, renal, metabolic, reproductive, and immune systems, growth and development, and sensory and motor systems.

Survey of Human Physiology: Read More [+]

Rules & Requirements

Prerequisites: Integrative Biology 131, Biology 1A

Credit Restrictions: Students will receive no credit for Integrative Biology 132 after completing Molecular and Cell Biology 136.

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week
Summer: 8 weeks - 6 hours of lecture and 2 hours of discussion per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

Survey of Human Physiology: Read Less [-]
INTEGBI 132L Mammalian Physiology Laboratory 2 Units
Terms offered: Spring 2021, Spring 2020, Spring 2019
In the laboratory component of IB132, students gain hands-on experience measuring physiological parameters, interpreting physiological data, designing experiments, and communicating ideas in writing and orally. Guided investigations include measurements of membrane potentials, responses of skeletal muscle to electrical stimulation, electromyography, pulmonary and cardiovascular measurements in humans, contractility and regulation of the frog heart, human electrocardiography, and renal control of body fluids. In two independent investigations, students identify their own questions, develop hypotheses, design and perform experiments, and present their studies in symposia. Background in elementary statistics, data analysis & oral presentation.
Mammalian Physiology Laboratory: Read More [+]

Rules & Requirements
Prerequisites: Previous or concurrent enrollment in 132 or equivalent, or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of laboratory per week
Summer: 8 weeks - 6 hours of laboratory per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Instructors: Brooks, Kaufer, Lehman

INTEGBI 133 Anatomy Enrichment Program 2 Units
Terms offered: Spring 2011, Spring 2010, Spring 2009
The purpose of the course is for University students to teach human anatomy to grades K-7 in the public schools. The UCB students work in groups of 2-3 to plan their presentations of the systems of the body and then enter the school rooms to teach what they have learned in 131. Anatomy Enrichment Program: Read More [+]

Prerequisites: 131 with a grade of A or B
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 4 hours of fieldwork per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Offered for pass/not pass grade only. Final exam required.

INTEGBI 134L Practical Genomics 4 Units
Terms offered: Fall 2021, Fall 2020
Genome sequencing and analyses have transformed biology over the past two decades. This course provides a hands-on introduction to the world of computational biology and bioinformatics. Students will apply state-of-the-art techniques to analyze genome and microbiome data from the UC Berkeley campus fox squirrels and local California ground squirrels each week. Students will master practical bioinformatics skills and then take on their own scientific research projects, all using genomic data collected specifically for this course. We will also explore key advances in the field of genomics over the past two decades of both humans and non-model organisms that have driven the current revolution in genome sciences.
Practical Genomics: Read More [+]

Rules & Requirements
Prerequisites: BIOLOGY 1A and BIOLOGY 1B

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 3 hours of laboratory per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructors: Sudmant, Tarvin

INTEGBI 135 The Mechanics of Organisms 4 Units
Terms offered: Spring 2016, Fall 2013, Fall 2011
Organism design in terms of mechanical principles; basics of fluid and solid mechanics with examples of their biological implications, stressing the dependence of mechanical behavior and locomotion on the structure of molecules, tissues, structural elements, whole organisms, and habitats.
The Mechanics of Organisms: Read More [+]

Rules & Requirements
Prerequisites: Introductory physics and biology recommended

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructors: Dudley, Full, Koehl

The Mechanics of Organisms: Read Less [-]
INTEGBI C135L Laboratory in the Mechanics of Organisms 3 Units
Introduction to laboratory and field study of the biomechanics of animals and plants using fundamental biomechanical techniques and equipment. Course has a series of rotations involving students in experiments demonstrating how solid and fluid mechanics can be used to discover the way in which diverse organisms move and interact with their physical environment. The laboratories emphasize sampling methodology, experimental design, and statistical interpretation of results. Latter third of course devoted to independent research projects. Written reports and class presentation of project results are required.
Laboratory in the Mechanics of Organisms: Read More [+]

Rules & Requirements
Prerequisites: INTEGBI 135 or consent of instructor. For Electrical Engineering and Computer Sciences students: EL ENG 105, EL ENG 120 or COMPSCI 184

Credit Restrictions: Students will receive no credit for C135L after taking 135L.

Hours & Format
Fall and/or spring: 15 weeks - 6 hours of laboratory, 1 hour of discussion, and 1 hour of fieldwork per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

INTEGBI 136 The Biology of Sex 4 Units
Terms offered: Fall 2021, Fall 2014, Summer 1991 10 Week Session
The ability to reproduce is a defining characteristic of life, and of great interest to biologists as well as humanity in general. What is sex, and why did it develop? Why do we have sexual reproduction, whereas some animals do not? This course will provide a comprehensive overview on the biology of sex from an evolutionary perspective with an emphasis on humans in comparison to other species. The course will consist of two lectures each week, and a lab where we discuss a paper, watch videos, or have discussion sections on specific topics that were covered in class.
The Biology of Sex: Read More [+]

Rules & Requirements
Prerequisites: Biology 1B, introductory genetics (Mendelian genetics, recombination, chromosomes)

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Bachtrog

The Biology of Sex: Read Less [-]

INTEGBI 137 Human Endocrinology 4 Units
Terms offered: Fall 2020, Fall 2019, Fall 2018
Course will address the role of hormones in physiology with a focus on humans. Regulation of hormone secretion and mechanisms of hormone action will be discussed. Physiological processes to be addressed include reproduction, metabolism, water balance, growth, fetal development. Experimental and clinical aspects will be addressed.
Human Endocrinology: Read More [+]

Rules & Requirements
Prerequisites: Biology 1A-1B; human physiology (132) strongly recommended

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Hayes

Human Endocrinology: Read Less [-]
INTEGBI 138 Comparative Endocrinology 4 Units
Terms offered: Spring 2021, Spring 2020, Spring 2019
The primary goal of this course is to provide students with a broad understanding of the evolution of hormonal systems. A comparative approach allows us to envisage how the complex mammalian endocrine system presumably evolved from that of more primitive vertebrates. Students will learn about endocrine pathways and endocrine-based behaviors of jawless fishes, fishes, amphibia, reptiles, birds, and mammals. In addition, students will gain an understanding of the experimental methods used in endocrine research. The class teaches students how to read and interpret the primary scientific literature; thus it encourages the critical thinking that is a fundamental skill for any scientist.

Comparative Endocrinology: Read More [+]

Rules & Requirements

Prerequisites: Biology 1A-1B. Organic Chemistry recommended

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

Instructor: Bentley

Comparative Endocrinology: Read Less [-]

INTEGBI 139 The Neurobiology of Stress 4 Units
Terms offered: Fall 2020, Fall 2019, Fall 2018
This course is designed to be an interdisciplinary course. It will adopt a broad-based approach to explore the concepts of stress, health, and disease, with a particular focus on current primary literature. The course will cover multiple dimensions in the study of stress, which employ genetic, epigenetic, molecular, cellular, physiological, and cognitive approaches, especially in the context of endocrine and neuroscience research. We will analyze the individual response to stress, how genetic and environmental factors play a role in it, how it translates to physiological and mental health and well-being vs. pathological conditions, and put that in a public health perspective.

The Neurobiology of Stress: Read More [+]

Objectives & Outcomes

Course Objectives: This course will emphasize the interconnected and multidirectional relationships between biology, behavior and the social environment. The study of stress is necessarily an interdisciplinary endeavor. This course is designed to explore the role of genes, hormones and experiences as they affect the stress-response and subsequently brain and behavior.

Rules & Requirements

Prerequisites: Biology 1A or Psychology 110. You will need a good understanding of the fundamentals of biology to do well in this class

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

Instructor: Kaufer

The Neurobiology of Stress: Read Less [-]
INTEGBI 140 Biology of Human Reproduction
4 Units
Terms offered: Spring 2021, Spring 2020, Spring 2019
Course focuses on biological and cultural aspects of human reproduction including conception, embryology, pregnancy, labor, delivery, lactation, infant/child development, puberty, and reproductive aging. This includes study of factors that diminish and factors that enhance fertility, reproduction, and maternal-child health. We explore evolutionary, ecological, environmental, cultural, ethnobiological, and nutritional determinants of fertility, reproductive rate, infant survival, and population growth.

INTEGBI C142L Introduction to Human Osteology
6 Units
Terms offered: Spring 2018, Spring 2016, Spring 2014
An intensive study of the human skeleton, reconstruction of individual and population characteristics, emphasizing methodology and analysis of human populations from archaeological and paleontological contexts, taphonomy, and paleopathology.

INTEGBI 141 Human Genetics
3 Units
Terms offered: Summer 2021 8 Week Session, Summer 2020 8 Week Session, Summer 2019 8 Week Session
Principles of inheritance, especially as applied to human traits, including molecular aspects of genetics, the genetic constitutions of populations, and questions of heredity/environment.

INTEGBI C143A Biological Clocks: Physiology and Behavior
3 Units
Terms offered: Fall 2020, Fall 2018, Fall 2016
A consideration of the biological clocks that generate daily, lunar, seasonal and annual rhythms in various animals including people. Emphasis on neuroendocrine substrates, development and adaptive significance of estrous cycles, feeding rhythms, sleep-wakefulness cycles, reproductive and hibernation cycles, body weight and migratory cycles.

INTEGBI 140 Biology of Human Reproduction: Read More [+]
Rules & Requirements
Prerequisites: Biology 1A or equivalent

INTEGBI C142L Introduction to Human Osteology: Read More [+]
Rules & Requirements
Prerequisites: Anthropology 1, Biology 1B

INTEGBI 141 Human Genetics: Read More [+]
Rules & Requirements
Prerequisites: One course in biological science
Credit Restrictions: Students will receive no credit for 141 after taking Molecular and Cell Biology 142 or C142 and Integrative Biology C163.

INTEGBI C143A Biological Clocks: Physiology and Behavior: Read More [+]
Rules & Requirements
Prerequisites: Completion of biological prerequisites for the major and one of the following: 110 or a course in animal organismal physiology (Integrative Biology 132, 138, 140, 148, or Molecular and Cell Biology 160)

INTEGBI 140 Biology of Human Reproduction: Read Less [-]

INTEGBI 141 Human Genetics: Read Less [-]

INTEGBI C143A Biological Clocks: Physiology and Behavior: Read Less [-]
INTEGBI C143B Hormones and Behavior 3 Units
Terms offered: Spring 2021, Spring 2019, Spring 2018
This course provides a comprehensive overview of behavioral endocrinology beginning with hormone production and actions on target issues and continuing with an exploration of a variety of behaviors and their hormonal regulation/consequences. The course uses a comparative approach to examine the reciprocal interactions between the neuroendocrine system and behavior, considering the effects of hormone on development and adult behavior in addition to how behavior regulates endocrine physiology. While much of the course focuses on non-human vertebrate species, the relevance to humans is explored where appropriate. Topics include sexual differentiation and sex differences in behavior, reproductive, parental, and aggressive behaviors, and hormonal and behavioral homeostatic regulation.

Hormones and Behavior: Read More [+]

Rules & Requirements

Prerequisites: Completion of biological prerequisites for the major and consent of instructor; a course in mammalian physiology recommended

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Kriegsfeld
Also listed as: PSYCH C116

Hormones and Behavior: Read Less [-]

INTEGBI C144 Animal Behavior 4 Units
Terms offered: Fall 2021, Fall 2020, Fall 2019
An introduction to comparative animal behavior and behavioral physiology in an evolutionary context, including but not limited to analysis of behavior, genetics and development, learning, aggression, reproduction, adaptiveness, and physiological substrates.

Animal Behavior: Read More [+]

Rules & Requirements

Prerequisites: Biology 1A, 1B, or Environmental Science, Policy, and Management 140. Molecular and Cell Biology 140 and C160 recommended
Credit Restrictions: Students will receive no credit for 144 after taking C144, 145, 146LF, or Psychology C115B.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructors: Lacey, Caldwell, Bentley, Elias
Also listed as: ESPM C126

Animal Behavior: Read Less [-]
INTEGBI C145 Animal Communication 3 Units
Terms offered: Spring 2020, Spring 2018
Communication is central to the lives of most, if not all animals. How and why animals communicate is thus central to understanding the ecology, behavior, neurobiology, and evolution of animal systems. This course will focus on understanding the basic principles driving the communication system of a species, drawing together topics ranging from the physical properties of the environment, physiology of sensory systems, animal behavior and ecology, using examples from classic and recent publications.

Animal Communication:

Rules & Requirements
Prerequisites: Biology 1B. Animal Behavior (ESPM C126/IB C144) recommended

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Elias
Formerly known as: Environ Sci, Policy, and Management 156
Also listed as: ESPM C156

Animal Communication: Read More [+]

INTEGBI 146LF Behavioral Ecology with Laboratory 5 Units
Terms offered: Spring 2019, Spring 2017, Spring 2015
An in-depth examination of the ecological and evolutionary bases for behavioral diversity. Topics covered include behavior as an adaptive response, sexual selection, animal mating systems, group living, and cooperative and competitive interactions. Current conceptual approaches to these topics are explored, with an emphasis upon rigorous testing of hypotheses drawn from primary literature. Hands-on laboratory training in the methods of experimental design, data collection, and data analysis.

Behavioral Ecology with Laboratory:

Rules & Requirements
Prerequisites: Integrative Biology 144 or Integrative Biology C144/Environmental Science, Policy and Management C126 or consent of instructor

Credit Restrictions: Students will receive partial credit for Integrative Biology 146LF after taking Integrative Biology 146.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture, 1 hour of discussion, and 3 hours of laboratory per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Lacey
Formerly known as: 146L

Behavioral Ecology with Laboratory: Read Less [-]
INTEGBI C147 Neuroethology: Complex Animal Behaviors and Brains 4 Units
Terms offered: Spring 2021, Spring 2002, Spring 2001
Neuroethologists study neural systems by combining behavior and neuroscience to understand the neural mechanism that have evolved in various animals to solve particular problems encountered in their environmental niches. This comparative approach that emphasizes how information is processed and transformed by the brain is particularly powerful for understanding neural systems. In this course, you will learn important concepts in ethology, sensory systems, motor systems and neural plasticity and development by studying the behavior and brains of animals such as crickets, lobsters, barn-owls, honey-bees, echolocating bats, electric fishes and songbirds.

Prerequisites: One foundational lower division level in general Biology, Animal Behavior or Neurosciences; UC Berkeley classes that satisfy this requirement are Bio 1A, Bio1B, IB 31, Psych C61/MCB C61, or Psych 110

INTEGBI 148 Comparative Animal Physiology 3 Units
Terms offered: Fall 2020, Fall 2018, Fall 2016
Comparative study of physiological systems among animal phyla. General physiological principles will be illustrated by examining variation in neural, muscular, endocrine, cardiovascular, respiratory, digestive, and osmoregulatory systems. Students will read original literature and give a group presentation in a symposium.

Prerequisites: Biology 1A-1B
Credit Restrictions: Students will receive no credit for 148 after taking 100A.

INTEGBI 150 Evolutionary Environmental Physiology 3 Units
Terms offered: Spring 2020, Spring 2018, Spring 2017
Evolutionary physiology studies how physiological traits arise and are modified during adaptation to the environment. An integrative understanding of the origin and maintenance of physiological traits, encompassing levels of biological hierarchy from molecular to ecological and biogeographic, is essential for improving human health and stewarding the natural world through the current era of rapid environmental change. This course consists of three parts: 1) big questions in evolutionary physiology and how they are addressed; 2) a student-led exploration of how environmental factors have shaped physiological evolution; and 3) predicting responses to global change using evolutionary physiology.

Prerequisites: Biology 1A-1B or equivalent
INTEGBI 151 Plant Physiological Ecology 4 Units
Terms offered: Spring 2020, Spring 2018, Spring 2015
This course focuses on a survey of physiological approaches to understanding plant-environment interactions from the functional perspective. Lectures cover physiological adaptation; limiting factors; resources acquisition/allocation; photosynthesis, carbon, energy balance; water use and relations; nutrient relations; linking physiology; stable isotope applications in ecophysiology; stress physiology; life history and physiology; evolution of physiological performance; physiology population, community, and ecosystem levels.
Plant Physiological Ecology: Read More [+]
Rules & Requirements
Prerequisites: Biology 1A,1B, or equivalent

Instructor: Weston
Environmental Toxicology: Read Less [-]
INTEGBI C153 Ecology 3 Units
Terms offered: Not yet offered
Ecology is a scientific discipline that focuses on the interactions between organisms and their environment. This class will provide an overview of core concepts and applications, and will also provide practice with writing, small-group work, critical thinking, and data analysis.
The class will specifically cover principles of population ecology, illustrated with examples from marine, freshwater, and terrestrial habitats. It will consider the roles of physical and biological processes in structuring natural communities. Observational, experimental, and theoretical approaches will be discussed. Topics will include quantitative approaches relying on algebra, visual analysis of graphs, and elementary calculus.
Ecology: Read More [+]

Rules & Requirements
Prerequisites: Biology 1B or consent of instructor
Credit Restrictions: Students will receive no credit for INTEGBI C153 after completing ESPM 153, or INTEGBI C153. A deficient grade in INTEGBI C153 may be removed by taking ESPM 153, or INTEGBI C153.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.

INTEGBI C155 Holocene Paleoecology: How Humans Changed the Earth 3 Units
Terms offered: Spring 2014, Spring 2011, Spring 1998
Since the end of the Pleistocene and especially with the development of agriculturally based societies humans have had cumulative and often irreversible impacts on natural landscapes and biotic resources worldwide. Thus "global change" and the biodiversity crisis are not exclusively developments of the industrial and post-industrial world. This course uses a multi-disciplinary approach, drawing upon methods and data from archaeology, palynology, geomorphology, paleontology, and historical ecology to unravel the broad trends of human ecodynamics over the past 10,000 years.
Holocene Paleoecology: How Humans Changed the Earth: Read More

INTEGBI C156 Principles of Conservation Biology 4 Units
Terms offered: Fall 2021, Summer 2021 Second 6 Week Session, Fall 2020
A survey of the principles and practices of conservation biology. Factors that affect the creation, destruction, and distribution of biological diversity at the level of the gene, species, and ecosystem are examined. Tools and management options derived from ecology and evolutionary biology that can recover or prevent the loss of biological diversity are explored.
Principles of Conservation Biology: Read More

INTEGBI C155 Holocene Paleoecology: How Humans Changed the Earth 3 Units
Fall and/or spring: 15 weeks - 3 hours of lecture per week

INTEGBI 157LF Ecosystems of California 4 Units
Terms offered: Fall 2021, Fall 2020, Fall 2019
The ecosystems of California are studied from both an ecological and historical biogeographical perspective with a focus on terrestrial plant communities. Students learn how to identify about 150 species of native plants (mostly trees, but also other dominant plants from the non-forest biomes). Field trips occur each Friday and over several weekends. Students conduct group projects that involve plant inventories and data collection as well as how to collect plant specimens and use the Herbarium.

Ecosystems of California: Read More [+]

Rules & Requirements

INTEGBI 159 The Living Planet: Impact of the Biosphere on the Earth System 3 Units
Terms offered: Fall 2019, Fall 2015, Fall 2013
Earth is a complex dynamic system. Interplay between its components (solid earth, oceans, and atmosphere) governs conditions on the planet's outside that we and other biota inhabit. In turn, life asserts a vast influence on the abiotic components; in fact, the biosphere itself is a crucial system component. We will explore the effect that 3.5 billion years of evolving biosphere had on System Earth and vice versa (e.g., in terms of climate), including the recent human impact on the system.

The Living Planet: Impact of the Biosphere on the Earth System: Read More [+]

Rules & Requirements
Prerequisites: Biology 1B or consent of instructor
Credit Restrictions: Students will receive two units of credit after taking Earth and Planetary Science 8, Earth and Planetary Science C141/Geography C141, or Geography 40.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 2 hours of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructors: Looy, Duijnstee
The Living Planet: Impact of the Biosphere on the Earth System: Read Less [-]

INTEGBI 160 Evolution 4 Units
Terms offered: Fall 2021, Fall 2020, Fall 2019
An analysis of the patterns and processes of organic evolution. History and philosophy of evolutionary thought; the different lines of evidence and fields of inquiry that bear on the understanding of evolution. The major features and processes of evolution through geologic times; the generation of new forms and new lineages; extinction; population processes of selection, adaptation, and other forces; genetics, genomics, and the molecular basis of evolution; evolutionary developmental biology; sexual selection; behavioral evolution; applications of evolutionary biology to medical, agricultural, conservational, and anthropological research.

Evolution: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Whiteman
Evolution: Read Less [-]
INTEGBI 161 Population and Evolutionary Genetics 4 Units
Terms offered: Spring 2021, Spring 2019, Spring 2017
Population genetics provides the theoretical foundation for modern evolutionary thinking. It also provides a basis for understanding genetic variation within populations. We will study population genetic theory and use it to illuminate a number of different topics, including the existence of sex, altruism and cooperation, genome evolution speciation, and human genetic variation and evolution.

Prerequisites: Biology 1A/1B, Mathematics 16A or 10A
Repeat rules: Course may be repeated for credit without restriction.

INTEGBI 162 Ecological Genetics 4 Units
Terms offered: Spring 2020, Fall 2016, Fall 2014
This course integrates ecology, genetics, and evolutionary biology. It presents contemporary approaches to studying evolution in natural populations, including analyzing heritability of ecologically important traits, using molecular techniques to decompose genotypes, documenting and measuring the magnitude of selection in natural systems, and using models to predict evolution in natural populations. Case studies are used to examine evolutionary effects of ecological interactions among organisms, the importance of population size and structure, and interactions among populations through migration and dispersal.

Prerequisites: Biology 1B

INTEGBI 163 Molecular and Genomic Evolution 3 Units
Terms offered: Spring 2012, Spring 2011, Spring 2010
This course will introduce undergraduates to the study of evolution using molecular and genomic methods. Topics included will be rates of evolution, evolution of sex chromosomes, insertions and deletions of DNA sequences, evolution of regulatory genetic elements, methods of phylogenetic inference, gene duplication, multigene families, transposons, genome organization, gene transfer, and DNA polymorphism within species.

Prerequisites: Biology 1A-1B

INTEGBI 164 Human Genetics and Genomics 4 Units
Terms offered: Fall 2021, Fall 2020, Fall 2019
This course will introduce students to basic principles of genetics, including transmissions genetics, gene regulation, pedigree analysis, population genetics, and the principles of molecular evolution. The course will also introduce students to recent developments in genomics as applied to problems in human genetic diseases, human history, and the relationship between humans and their closest relatives.

Prerequisites: Biology 1A, 1B, and Math 16A, or equivalent

Rules & Requirements

INTEGBI 168L Plants: Diversity and Evolution 4 Units
Terms offered: Spring 2021, Spring 2019, Spring 2017
Plants form the foundation of terrestrial life, are critical for human civilization, and exhibit an extraordinary variety of "behaviours", forms, and functions. This course introduces the global diversity of land plants and their evolution. There are far too many plants to cover in a single course so our goals, instead, are to become familiar with the major groups, to understand their evolution and their importance to human society, and to be familiar with the tools used to study their relationships and classification (systematics).
Plants: Diversity and Evolution: Read More [+]
Rules & Requirements
Prerequisites: Biology 1A-1B

Plants: Diversity and Evolution: Read Less [-]
INTEGBI 169 Evolutionary Medicine 4 Units
Terms offered: Spring 2021, Spring 2020, Spring 2019
This course explores the ways that evolutionary theory, natural selection, drift, genetics, and epigenetics can illuminate our understanding of human health and disease. The course begins with an overview of primate and hominid evolution and human genetic variation. We then evaluate reproductive biology and maternal/child health through an evolutionary lens. We explore how human ecosystem interactions influence diet, metabolic adaptations, hematological adaptations, human microbiome, and human pathogens. We examine evolutionary concepts related to aging, senescence and development of cancer. Finally we study psychology, behavior, and social/cultural organization through an evolutionary perspective.
Evolutionary Medicine: Read More [+]

INTEGBI 170LF Methods in Population and Community Ecology 3 Units
Terms offered: Spring 2019, Spring 2017, Spring 2015
This course is a hands-on introduction to common research methods in population and community ecology. Each method and its application are first presented in a lecture session, illustrated with published examples. The method is then practiced in a subsequent group field exercise, conducted in a local terrestrial, aquatic, or marine habitat. The course focuses on sampling methods, experimental designs, and statistical analyses used to investigate patterns of species distribution and abundance, interspecific associations, and local species diversity. Graded assignments include write-ups of field exercise results, and an in-depth review paper and oral in-class presentation on an ecological method of particular interest to the student.
Methods in Population and Community Ecology: Read More [+]

Objectives & Outcomes
Course Objectives: This course is designed as a hands-on introduction to common research methods in population and community ecology. Students will learn how to quantitatively describe and statistically analyze patterns in (1) the distribution, abundance, and size/age distributions of populations, (2) the diversity and similarity of multi-species assemblages, (3) interspecific association, and (4) habitat preference and selectivity. They will also be taught the fundamentals of experimental design and apply them in a field predator-prey manipulation.

Rules & Requirements
Prerequisites: Integrative Biology 153 or comparable upper-division course in ecology from Integrative Biology or Environmental Science Policy and Management course lists (or by consent of instructor); introductory course in statistics strongly recommended
Credit Restrictions: Students will receive no credit for Integrative Biology 170LF after completing Integrative Biology 153L.

Hours & Format
Fall and/or spring: 15 weeks - 8 hours of laboratory per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Instructor: Sousa
Formerly known as: Integrative Biology 153LF
Methods in Population and Community Ecology: Read Less [-]
INTEGBI C171 Freshwater Ecology 3 Units
Terms offered: Spring 2021, Spring 2020, Spring 2019
Lakes, rivers, wetlands, and estuaries are biologically rich, dynamic, and among the most vital and the most vulnerable of Earth’s ecosystems. Lectures will introduce general topics including the natural history of freshwater biota and habitats, ecological interactions, and ecosystem linkages and dynamics. Broad principles will be illustrated with results from selected recent research publications. Factors affecting resilience or vulnerability of freshwater ecosystems to change will be examined. Course requirements: two exams and a short synthesis paper projecting the future states of a freshwater or estuarine ecosystem of the student’s choice under plausible scenarios of local, regional, or global change. Freshwater Ecology: Read More [+]

INTEGBI 172 Coevolution: From Genes to Ecosystems 4 Units
Terms offered: Spring 2021, Spring 2020, Spring 2019
The biological world is shaped by interactions among species. These inter-specific interactions, such as between predators and prey, plants and pollinators, or hosts and pathogens, have led to an impressive array of adaptations, helping to explain the incredible organismal and genetic diversity on Earth. Our understanding of coevolution (the responses to reciprocal selection acting on two interacting populations) has been greatly facilitated in the last few years by conceptual advancements, new methods allowing direct tests of theory, next generation sequencing technology, and the advance of ‘omics’ approaches. Course requirements: Bio 1A and Bio 1B or equivalent required, Genetics or Evolution course suggested.

Rules & Requirements
Prerequisites: Bio 1A and Bio 1B or equivalent required, Genetics or Evolution course suggested

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

INTEGBI 173LF Mammalogy with Laboratory 5 Units
Terms offered: Fall 2020, Fall 2018, Fall 2016
An advanced course in the biology of mammals. Topics covered include elements of modern mammalian biology such as morphology, physiology, ecology, and behavior. For all topics, the traits that define mammals are emphasized, as is the variation on these themes evident within modern mammalian lineages. Laboratory and field explore the biology of modern mammals. Laboratories use the extensive collections of the Museum of Vertebrate Zoology to introduce students to mammalian diversity in a phylogenetic context.

Mammalogy with Laboratory: Read More [+]

Rules & Requirements
Prerequisites: 104LF
Credit Restrictions: Students will receive partial credit for 173LF after taking 173.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 6 hours of laboratory per week

INTEGBI 174LF Ornithology with Laboratory 4 Units
Terms offered: Spring 2019, Spring 2017, Spring 2015
An advanced course in the biology of birds. Laboratory: an introduction to the diversity, morphology, and general ecology of birds of the world.

Ornithology with Laboratory: Read More [+]

Rules & Requirements
Prerequisites: 104LF or consent of instructor
Credit Restrictions: Students will receive partial credit for 174LF after taking 174.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 6 hours of laboratory per week

INTEGBI 174LF Ornithology with Laboratory 4 Units
Terms offered: Spring 2019, Spring 2017, Spring 2015
An advanced course in the biology of birds. Laboratory: an introduction to the diversity, morphology, and general ecology of birds of the world.

INTEGBI 174LF Ornithology with Laboratory 4 Units
Terms offered: Spring 2019, Spring 2017, Spring 2015
An advanced course in the biology of birds. Laboratory: an introduction to the diversity, morphology, and general ecology of birds of the world.

Instructor: Bowie

Ornithology with Laboratory: Read Less [-]
**INTEGBI 175LF Herpetology with Laboratory**

4 Units  
Terms offered: Spring 2020, Spring 2018, Spring 2015  
Lectures will introduce students to the diversity of amphibians and reptiles on a world-wide basis, with an emphasis on systematics, ecology, morphology, and life history. Laboratories will teach students the diagnostic characteristics and some functional attributes of amphibians and reptiles on a world-wide basis. Field trips will acquaint students with techniques for collecting, preserving, identifying, and studying amphibians and reptiles.

Herpetology with Laboratory: Read More [+]

**Rules & Requirements**

**Prerequisites:** 104LF

**Credit Restrictions:** Students will receive partial credit for 175LF after taking 175.

**Hours & Format**

Fall and/or spring: 15 weeks - 2 hours of lecture and 4 hours of laboratory per week

**Additional Details**

**Subject/Course Level:** Integrative Biology/Undergraduate

**Grading/Final exam status:** Letter grade. Final exam required.

**Instructor:** McGuire

Herpetology with Laboratory: Read Less [-]

**INTEGBI C176L Fish Ecology**

3 Units  
Terms offered: Spring 2021, Spring 2020, Spring 2019  
Introduction to fish ecology, with particular emphasis on the identification and ecology of California's inland fishes. This course will expose students to the diversity of fishes found in California, emphasizing the physical (e.g., temperature, flow), biotic (e.g., predation, competition), and human-related (e.g., dams, fisheries) factors that affect the distribution, diversity, and abundance of these fishes.

Fish Ecology: Read More [+]

**Rules & Requirements**

**Prerequisites:** Introductory course in biological science; upper division or graduate standing

**Hours & Format**

Fall and/or spring: 15 weeks - 2 hours of lecture and 3 hours of laboratory per week

**Additional Details**

**Subject/Course Level:** Integrative Biology/Undergraduate

**Grading/Final exam status:** Letter grade. Final exam required.

**Instructor:** Carlson

Fish Ecology: Read Less [-]

**INTEGBI 177LF Ichthyology: An Introduction to the Scientific Process Through Research on Fishes**

4 Units  
Terms offered: Fall 2021, Fall 2020  
Did you know that our closest living fish relative can build a cocoon and hibernate for three years? Or that some fish make a living by eating scales? This class will conduct publishable research in evolution, ecology, and behavior by doing actual science on fishes. We will attempt to answer unknown questions about the evolution of fascinating adaptations in diverse groups of fishes in both the laboratory and field.

Ichthyology: An Introduction to the Scientific Process Through Research on Fishes: Read More [+]

**Objectives & Outcomes**

**Course Objectives:** This class is meant to be an introduction to research through ichthyology: students are not expected to have any prior research experience. The primary focus throughout the semester will be on independent group projects conducting laboratory and field experiments testing hypotheses about our focal fish groups: scale-eating pupfish, sponge-eating cichlids, cocoon-building lungfish, Monterey kelp forest communities, and four-eyed fishes. By focusing on these diverse study systems, students will receive a broad perspective on how to investigate and test hypotheses about adaptation in the field and lab. The class will include three field trips, high-speed video of prey capture, and detailed studies of behavior, ecology, and functional morphology.

**Student Learning Outcomes:** Students will be taught how to generate original hypotheses, collect and analyze data in the R statistical programming language, discuss scientific literature, present their research, and publish their results. Students will ask their own independent research questions and conduct experiments to answer them. Lecture topics will focus on the evolution, ecology, behavior, anatomy, and biodiversity of fishes, with an introduction to concepts including adaptationism, natural selection, convergent evolution, exaptation, tree thinking, evolutionary novelty, behavioral ecology, applications to human health, and conservation.

**Rules & Requirements**

**Prerequisites:** Basic background in ecology and evolution (e.g. AP Bio or BIO 1B) or permission of instructor

**Hours & Format**

Fall and/or spring: 15 weeks - 3 hours of lecture and 3 hours of laboratory per week

**Additional Details**

**Subject/Course Level:** Integrative Biology/Undergraduate

**Grading/Final exam status:** Letter grade. Alternative to final exam.

INTEGBI 181L Paleobotany - The 500-Million Year History of a Greening Planet 4 Units
Terms offered: Spring 2020, Spring 2018, Spring 2016
Introduction to the evolution of plants and terrestrial ecosystems through time. From the invasion of land to the present, we will follow the evolution of major plant groups through important moments of the Phanerozoic eon (the past 540 million years). By studying fossilized plant assemblages, we will interpret how major environmental changes unfolded across landscapes in the past and how plants have influenced the shaping of our planet. Lectures will be complemented by an interactive laboratory covering paleobotanical research techniques, study of fossil and living plant form and function in the lab and field, and analysis of peer-reviewed literature.

Paleobotany - The 500-Million Year History of a Greening Planet: Read More [+]

Rules & Requirements
Prerequisites: Courses in botany and geology are recommended

INTEGBI 184L Morphology of the Vertebrate Skeleton with Laboratory 4 Units
Terms offered: Fall 2021, Fall 2019, Spring 2015
Lectures on comparative osteology of vertebrates, with emphasis on selected groups of terrestrial vertebrates considered in paleoecological, paleoclimatological, and biostratigraphic analyses. Laboratory: comparative osteology of vertebrates, with emphasis on selected groups of vertebrates. Structure, anatomy, morphology, function, and development of the vertebrate skeleton.

INTEGBI C185L Human Paleontology 5 Units
Terms offered: Spring 2020, Spring 2017, Spring 2015
Origin and relationships of the extinct forms of mankind. Human Paleontology: Read More [+]

INTEGBI C187 Human Biogeography of the Pacific 3 Units
Terms offered: Spring 2015, Spring 2013
This course examines the history of human dispersal across Oceania from the perspectives of biogeography and evolutionary ecology. H. sapiens faced problems of dispersal, colonization, and extinction, and adapted in a variety of ways to the diversity of insular ecosystems. A dual evolutionary model takes into account cultural evolution and transmission, as well as biological evolution of human populations. This course also explores the impacts of human populations on isolated and fragile insular ecosystems, and the reciprocal effects of anthropogenic change on human cultures.

Rules & Requirements

Prerequisites: Biology 1B or introductory courses in Earth Sciences or Anthropology

Credit Restrictions: Students will receive partial credit for 184L after taking 184.

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture, 1 hour of discussion, and 6 hours of laboratory per week

Additional Details

Subject/Course Level: Integrative Biology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

Instructor: Barnosky

INTEGBI C187 Human Biogeography of the Pacific 3 Units

INTEGBI 190 Seminar for Integrative Biology Majors 1 - 3 Units
Terms offered: Spring 2016, Spring 2015, Spring 2014
This upper-division undergraduate course will allow students to pursue specialized topics in biology in a seminar format. The specific content of the course will vary based on the topic and the instructor. In general, weekly meetings will provide a forum for extended discussion of selected aspects of evolutionary biology. Supplementary readings and assignments will provide critical background information and keep students engaged in relevant topics between weekly meetings.

INTEGBI 191 Directed Undergraduate Research 3 Units
Terms offered: Spring 2020, Spring 2017, Fall 2016
This course is intended for advanced undergraduates wishing to pursue independent research projects under the mentorship of an IB faculty member. Research projects will be rigorous and will provide significant training in the methods of evolutionary research. A project proposal is required to enroll and students are expected to produce a substantial written summary of their work.
Directed Undergraduate Research: Read More [+]
Rules & Requirements
Prerequisites: Consent of instructor and departmental adviser
Repeat rules: Course may be repeated for credit up to a total of 2 times.
Hours & Format
Fall and/or spring: 15 weeks - 9 hours of independent study per week
Summer:
8 weeks - 17 hours of independent study per week
10 weeks - 13.5 hours of independent study per week
Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Letter grade. Alternate method of final assessment during regularly scheduled final exam group (e.g., presentation, final project, etc.).

INTEGBI 192 Applied Pedagogy in Integrative Biology 2 - 3 Units
Terms offered: Fall 2021, Spring 2021
This course provides undergraduate students with direct, hands-on experience with pedagogical practices in a laboratory course setting. Many students seek opportunities to continue participating in laboratory courses that they have already completed due to an interest in the topic and a desire to engage in the process of biological instruction. This course allows qualified undergraduates to gain direct experience with instruction of lab courses in a structured, mentored, and pedagogically informed setting. Each student in the course will be paired with a Graduate Student Instructor who will provide near-peer mentoring regarding classroom practices and development of pedagogical practices.

Prerequisites: This course must initially be taken concurrently with IB 193 (Practical Pedagogy: Becoming an Effective Instructor in Biology). Subsequently, IB 192 can be taken in additional semesters without also enrolling in IB 193.

Repeat rules: Course may be repeated for credit with instructor consent.

Hours & Format
Fall and/or spring: 15 weeks - 2-3 hours of laboratory per week
Summer: 8 weeks - 4-6 hours of laboratory per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Offered for pass/not pass grade only. Alternative to final exam.

INTEGBI 193 Practical Pedagogy: Becoming an Effective Instructor in Biology 1 Unit
Terms offered: Fall 2021, Spring 2021
This course provides undergraduates with conceptual and practical expertise in teaching lab-based courses in biology. Through discussion and implementation of diverse pedagogical practices, students will gain competence as instructors while furthering their understanding of select topics in evolutionary biology.

Rules & Requirements
Prerequisites: This course is a pre-requisite to IB 192 (Applied Pedagogy in Integrative Biology) but may be taken concurrently with that course.

Repeat rules: Course may be repeated for credit up to a total of 1 time.

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of seminar per week

Additional Details
Subject/Course Level: Integrative Biology/Undergraduate
Grading/Final exam status: Offered for pass/not pass grade only. Alternative to final exam.

INTEGBI C200 Principles of Phylogenetics 4 Units
Terms offered: Fall 2016, Summer 2016 10 Week Session, Spring 2014

The core theory and methodology for comparative biology, beginning with issues in building phylogenetic trees, with emphases on both morphology and molecules, and both living and fossil organisms. Also covers the many applications of phylogenetic trees to systematics, biogeography, speciation, conservation, population genetics, ecology, behavior, development, functional morphology, and macroevolution that have revolutionized those fields. Labs are closely integrated with lectures and cover the major algorithms and computer software used to implement these approaches. Requirements include participation in discussions, two exams, and a term project.
Principles of Phylogenetics: Read More [+]

INTEGBI C201 Introduction to Quantitative Methods In Biology 4 Units
Terms offered: Spring 2021
This course provides a fast-paced introduction to a variety of quantitative methods used in biology and their mathematical underpinnings. While no topic will be covered in depth, the course will provide an overview of several different topics commonly encountered in modern biological research including differential equations and systems of differential equations, a review of basic concepts in linear algebra, an introduction to probability theory, Markov chains, maximum likelihood and Bayesian estimation, measures of statistical confidence, hypothesis testing and model choice, permutation and simulation, and several topics in statistics and machine learning including regression analyses, clustering, and principal component analyses.

Introduction to Quantitative Methods In Biology: Read More [+]
Objectives & Outcomes
Student Learning Outcomes: Ability to calculate means and variances for a sample and relate it to expectations and variances of a random variable.
Ability to calculate probabilities of discrete events using simple counting techniques, addition of probabilities of mutually exclusive events, multiplication of probabilities of independent events, the definition of conditional probability, the law of total probability, and Bayes’ formula, and familiarity with the use of such calculations to understand biological relationships.
Ability to carry out various procedures for data visualization in R.
Ability to classify states in discrete time Markov chains, and to calculate transition probabilities and stationary distributions for simple discrete time, finite state-space Markov chains, and an understanding of the modeling of evolutionary processes as Markov chains.
Ability to define likelihood functions for simple examples based on standard random variables.
Ability to implement simple statistical models in R and to use simple permutation procedures to quantify uncertainty.
Ability to implement standard and logistic regression models with multiple covariates in R.
Ability to manipulate matrices using multiplication and addition.
Ability to model simple relationships between biological variables using differential equations.
Ability to work in a Unix environment and manipulating files in Unix.
An understanding of basic probability theory including some of the standard univariate random variables, such as the binomial, geometric, exponential, and normal distribution, and how these variables can be used to model biological systems.
An understanding of powers of matrices and the inverse of a matrix.
An understanding of sampling and sampling variance.
An understanding of the principles used for point estimation, hypothesis testing, and the formation of confidence intervals and credible intervals.
Familiarity with ANOVA and ability to implement it in R.
Familiarity with PCA, other methods of clustering, and their implementation in R.
Familiarity with basic differential equations and their solutions.
Familiarity with covariance, correlation, ordinary least squares, and interpretations of slopes and intercepts of a regression line.
Familiarity with functional programming in R and/or Python and ability to define new functions.
Familiarity with one or more methods used in machine learning/statistics such as hidden Markov models, CART, neural networks, and/or graphical models.
Familiarity with python allowing students to understand simple python scripts.
Familiarity with random effects models and ability to implement them in R.
Familiarity with the assumptions of regression and methods for investigating the assumptions using R.

Student Learning Outcomes: Ability to calculate means and variances for a sample and relate it to expectations and variances of a random variable.

INTEGBI C204 Research Reviews in Animal Behavior: Behavior Review 1 Unit
Terms offered: Fall 2021, Spring 2021, Fall 2020
This course will provide a rigorous, critical review of current research in animal behavior. Emphases will include hypothesis testing and experimental design, as well as methods of data collection and analysis. Each week, a student in the course will present original research in the form of a seminar presentation, grant proposal, or manuscript. Through discussion with seminar participants, presenters will gain critical feedback regarding their research.

Prerequisites: Graduate standing, basic course in animal behavior. Instructor approval required
Repeat rules: Course may be repeated for credit without restriction.

INTEGBI C205 Quantitative Methods for Ecological and Environmental Modeling 3 Units
Terms offered: Fall 2015, Fall 2013, Fall 2012, Fall 2011, Fall 2009
This course will review the background mathematical and statistical tools necessary for students interested in pursuing ecological and environmental modeling. Topics include linear algebra; difference equation, ordinary differential equation, and partial differential equation models; stochastic processes; parameter estimation; and a number of statistical techniques. This course will be recommended as a prerequisite for advanced modeling courses in Integrative Biology, Energy and Resources Group, and Environmental Science, Policy, and Management.

Prerequisites: Consent of instructor

INTEGBI 206 Statistical Phylogenetics 3 Units
Terms offered: Fall 2020, Fall 2018, Fall 2012
This course is aimed at students who wish to understand the evolutionary models and methods for estimating phylogenies (which are trees representing how organisms are related to one another). Topics include continuous-time Markov chains as applied in phylogenetics; maximum likelihood estimation; Bayesian estimation; the combinatorics of evolutionary trees; Markov chain Monte Carlo; distance and parsimony methods for estimating trees; optimization strategies for finding best trees. Students will learn to write computer programs that implement many of the methods discussed in class, and apply their knowledge in a research project.

Prerequisites: College level course in calculus

INTEGBI (INTEGBI)
INTEGBI C215 Communicating Ocean Science 4 Units
For graduate students interested in improving their ability to communicate their scientific knowledge by teaching ocean science in elementary schools or science centers/aquariums. The course will combine instruction in inquiry-based teaching methods and learning pedagogy with six weeks of supervised teaching experience in a local school classroom or the Lawrence Hall of Science with a partner. Thus, students will practice communicating scientific knowledge and receive mentoring on how to improve their presentations.

**Rules & Requirements**

**Prerequisites:** One course in introductory biology, geology, chemistry, physics, or marine science required and interest in ocean science, junior, senior, or graduate standing; consent of instructor required for sophomores

**Hours & Format**

Fall and/or spring: 15 weeks - 2.5 hours of lecture, 1 hour of discussion, and 2 hours of fieldwork per week

**Additional Details**

**Subject/Course Level:** Integrative Biology/Professional course for teachers or prospective teachers

**Grading:** Letter grade.

**Instructor:** Ingram

Also listed as: EPS C301/GEOG C301

Communicating Ocean Science: Read More [+]

INTEGBI C216 Freshwater Ecology 3 Units
This graduate course will combine formal lectures and discussion, with the overall goal of exposing students to general concepts in freshwater ecology. We will discuss a broad range of topics including freshwater environments and biota, natural selection and adaptive evolution, food webs and trophic cascades, cross-ecosystem linkages, and social-ecological resilience of freshwater ecosystems under global change. Upper division undergraduates are welcome, with permission of the instructors.

**Rules & Requirements**

**Prerequisites:** Graduate standing in engineering or consent of instructor

**Hours & Format**

Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

**Additional Details**

**Subject/Course Level:** Integrative Biology/Graduate

**Grading:** Letter grade.

**Instructors:** Carlson, Power

Also listed as: ESPM C216

Freshwater Ecology: Read Less [-]

INTEGBI C217 Biomimetic Engineering -- Engineering from Biology 3 Units
Terms offered: Fall 2017, Spring 2014, Fall 2010
Study of nature's solutions to specific problems with the aim of determining appropriate engineering analogs. Morphology, scaling, and design in organisms applied to engineering structures. Mechanical principles in nature and their application to engineering devices. Mechanical behavior of biological materials as governed by underlying microstructure, with the potential for synthesis into engineered materials. Trade-offs between redundancy and efficiency. Students will work in teams on projects where they will take examples of designs, concepts, and models from biology and determine their potential in specific engineering applications.

**Rules & Requirements**

**Prerequisites:** Graduate standing in engineering or consent of instructor

**Hours & Format**

Fall and/or spring: 15 weeks - 3 hours of lecture per week

**Additional Details**

**Subject/Course Level:** Integrative Biology/Graduate

**Grading:** Letter grade.

**Instructor:** Dharan

Also listed as: BIO ENG C217/MEC ENG C217

Biomimetic Engineering -- Engineering from Biology: Read Less [-]
INTEGBI 222 Seminar in Physiological Energetics and Biomechanics 2 Units
Terms offered: Fall 2021, Spring 2021, Fall 2020
Discussion and critique of scientific literature and current topics in physiological energetics and biomechanics. Emphasis is on metabolic energetics. Topics include efficiency, energy-saving mechanisms, muscle function, oxidative stress, development in metabolic physiology and biochemistry and comparative aspects.
Seminar in Physiological Energetics and Biomechanics: Read More [+]
Rules & Requirements
Prerequisites: Consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of seminar per week

Additional Details
Subject/Course Level: Integrative Biology/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.

Seminar in Physiological Energetics and Biomechanics: Read Less [-]

INTEGBI 223 Seminar on Bioenergetics and Metabolism 2 Units
Terms offered: Fall 2021, Fall 2020, Fall 2019
Immediate and long-range adaptations of the body to exercise. Physiological limits and work capacities in relation to age, sex, diet, environmental factors, and nature of activity.
Seminar on Bioenergetics and Metabolism: Read More [+]
Rules & Requirements
Prerequisites: 123A, 123AL
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of seminar per week

Additional Details
Subject/Course Level: Integrative Biology/Graduate
Grading: Letter grade.
Instructor: Brooks
Seminar on Bioenergetics and Metabolism: Read Less [-]

INTEGBI C226 Isotopics 2 Units
Terms offered: Fall 2020, Fall 2019, Fall 2018
This seminar will explore current topics that employ the use of stable isotopes. Discussion topics include the areas of biology, paleontology, biogeochemistry, soil science, and atmospheric science. Students will be required to lead at least one discussion of relevant literature in the topic area.
Isotopics: Read More [+]

Hours & Format
Fall and/or spring: 10 weeks - 3 hours of seminar per week

Additional Details
Subject/Course Level: Integrative Biology/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.
Instructors: Amundson, Dawson, Mambelli
Also listed as: ESPM C225
Isotopics: Read Less [-]

INTEGBI C227 Stable Isotope Ecology 5 Units
Course focuses on principles and applications of stable isotope chemistry as applied to the broad science of ecology. Lecture topics include principles of isotope behavior and chemistry, and isotope measurements in the context of terrestrial, aquatic, and marine ecological processes and problems. Students participate in a set of laboratory exercises involving preparation of samples of choice for isotopic analyses, the use of the mass spectrometer and optical analysis systems, and the analysis of data.
Stable Isotope Ecology: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 3 hours of laboratory per week

Additional Details
Subject/Course Level: Integrative Biology/Graduate
Grading: Letter grade.
Instructors: Amundson, Dawson, Mambelli
Also listed as: EPS C241/ESPM C220
Stable Isotope Ecology: Read Less [-]
INTEGBI 230 Marine Ecosystems and Global Change 1 Unit
Terms offered: Fall 2018, Spring 2018, Spring 2017
The purpose of this course is to discuss recent advances in the effects of global change (inclusive of climate change, pollution, overfishing, introduced species, etc.) on any aspect of coastal marine or estuarine ecosystems. This class is aimed at graduate students or advanced undergraduate students ready to read the primary literature and engage in active discussions of the findings and implications. Students interested in learning about cutting edge research on the effects of climate change and other anthropogenic stressors on coastal marine and estuarine ecosystems will find this class to be worthwhile.

Rules & Requirements
Prerequisites: Graduate student status or permission of instructor for undergraduate students

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of seminar per week

Additional Details
Subject/Course Level: Integrative Biology/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.
Instructor: Stillman

INTEGBI 232 Seminar in Biomechanics 2 Units
Terms offered: Fall 2019, Fall 2017, Spring 2017
Presentation, discussion, and critique of current literature in scientific research and current topics in comparative biomechanics which include solid and fluid mechanics, locomotion, and energetics.

Rules & Requirements
Prerequisites: Consent of instructor
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of seminar per week

Additional Details
Subject/Course Level: Integrative Biology/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.
Instructor: Hayes

INTEGBI 234 Seminar on Biology of Amphibians and Reptiles 1 Unit
Terms offered: Fall 2021, Spring 2021, Fall 2020
Review of current research activity and literature concerning the biology of amphibians and reptiles.

Rules & Requirements
Prerequisites: Graduate standing and consent of instructor

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 8 weeks - 2 hours of seminar per week

INTEGBI 241 Advanced Topics in Endocrine-Regulated Development 3 Units
Terms offered: Spring 2019, Spring 2018, Spring 2015
This course will examine intentional endocrine disruption, such as the use of pharmaceuticals to regulate hormones in humans, livestock, and wildlife. We will also evaluate endocrine disrupting pollutants and their impacts on wildlife and humans, including their potential role in cancer.

Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of seminar per week

INTEGBI 253 Laboratory in Marine Ecosystems 1 Unit
Terms offered: Fall 2018, Spring 2018
Laboratory based on research activity in marine ecosystems. Students will be required to interpret and present findings and conclusions of their research. This class is aimed at graduate students who are familiar with current literature in marine ecosystems.

Rules & Requirements
Prerequisites: Graduate student standing or permission of instructor

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lab per week

INTEGBI 234 Seminar on Biology of Amphibians and Reptiles 1 Unit
Terms offered: Fall 2021, Spring 2021, Fall 2020
Review of current research activity and literature concerning the biology of amphibians and reptiles.

Rules & Requirements
Prerequisites: Graduate standing and consent of instructor

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 8 weeks - 2 hours of seminar per week

INTEGBI 241 Advanced Topics in Endocrine-Regulated Development 3 Units
Terms offered: Spring 2019, Spring 2018, Spring 2015
This course will examine intentional endocrine disruption, such as the use of pharmaceuticals to regulate hormones in humans, livestock, and wildlife. We will also evaluate endocrine disrupting pollutants and their impacts on wildlife and humans, including their potential role in cancer.

Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of seminar per week

INTEGBI 253 Laboratory in Marine Ecosystems 1 Unit
Terms offered: Fall 2018, Spring 2018
Laboratory based on research activity in marine ecosystems. Students will be required to interpret and present findings and conclusions of their research. This class is aimed at graduate students who are familiar with current literature in marine ecosystems.

Rules & Requirements
Prerequisites: Graduate student standing or permission of instructor

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lab per week

INTEGBI 234 Seminar on Biology of Amphibians and Reptiles 1 Unit
Terms offered: Fall 2021, Spring 2021, Fall 2020
Review of current research activity and literature concerning the biology of amphibians and reptiles.

Rules & Requirements
Prerequisites: Graduate standing and consent of instructor

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 8 weeks - 2 hours of seminar per week

INTEGBI 241 Advanced Topics in Endocrine-Regulated Development 3 Units
Terms offered: Spring 2019, Spring 2018, Spring 2015
This course will examine intentional endocrine disruption, such as the use of pharmaceuticals to regulate hormones in humans, livestock, and wildlife. We will also evaluate endocrine disrupting pollutants and their impacts on wildlife and humans, including their potential role in cancer.

Rules & Requirements

Seminar in Computational Biology: Read Less [-]
INTEGBI 263 Genetics and the Evolution of the Skeleton 2 Units
Terms offered: Spring 2016, Spring 2015, Spring 2012
In this seminar, we will explore the genetic underpinnings of vertebrate skeletal variation and review how such information is being incorporated into evolutionary and paleontological studies. Topics include quantitative genetic analyses of cranial variation and developmental genetics of the limb and dentition. This course will be tailored each semester to cover new research; therefore, students may enroll in this course multiple semesters.

Prerequisites: A graduate-level course in biology or consent of instructor
Repeat rules: Course may be repeated for credit without restriction.

INTEGBI 264 Seminar in Evolutionary Biology of the Vertebrates 1 Unit
Terms offered: Fall 2021, Spring 2021, Fall 2020
Presentation of results of original research by students, faculty, and visitors.

Prerequisites: Graduate standing; consent of instructor
Repeat rules: Course may be repeated for credit without restriction.

INTEGBI 265 Advanced Studies in Hominid Paleobiology 2 Units
Terms offered: Fall 2020, Spring 2020, Fall 2019
This is a graduate level course that focuses on special topics within hominid evolutionary studies. The topic for each semester will be decided upon during the first class meeting. Previous advanced training in biology, human evolutionary studies, and evolutionary theory is required.

Prerequisites: Students need to have advanced undergraduate/graduate courses in biology, primate evolution, evolutionary theory, and/or geology. Enrollment is by consent of instructor only
Repeat rules: Course may be repeated for credit without restriction.

INTEGBI 268 Seminar in Evolution above the Species Level 2 Units
Terms offered: Fall 2009, Fall 2006, Fall 2004
Current issues in macroevolution and paleobiology, using both neontological and paleontological data.

Prerequisites: Offered for satisfactory/unsatisfactory grade only.

INTEGBI 269 Seminar in Evolution above the Species Level 2 Units
Terms offered: Fall 2009, Fall 2006, Fall 2004
Current issues in macroevolution and paleobiology, using both neontological and paleontological data.

Prerequisites: Offered for satisfactory/unsatisfactory grade only.

Instructors: Hlusko, White

INTEGBI 270 Seminar in Evolution above the Species Level 2 Units
Terms offered: Fall 2009, Fall 2006, Fall 2004
Current issues in macroevolution and paleobiology, using both neontological and paleontological data.

Prerequisites: Offered for satisfactory/unsatisfactory grade only.

INTEGBI 271 Seminar in Evolution above the Species Level 2 Units
Terms offered: Fall 2009, Fall 2006, Fall 2004
Current issues in macroevolution and paleobiology, using both neontological and paleontological data.

Prerequisites: Offered for satisfactory/unsatisfactory grade only.

INTEGBI 272 Seminar in Evolution above the Species Level 2 Units
Terms offered: Fall 2009, Fall 2006, Fall 2004
Current issues in macroevolution and paleobiology, using both neontological and paleontological data.

Prerequisites: Offered for satisfactory/unsatisfactory grade only.
INTEGBI 281 Seminar in Evolution 2 Units
Terms offered: Spring 2021, Spring 2020, Spring 2019
Advanced study and current literature in various fields of evolution. Topics vary from year to year.
Seminar in Evolution: Read More [+]

Hours & Format

Fall and/or spring: 15 weeks - 0 hours of fieldwork per week

Additional Details
Subject/Course Level: Integrative Biology/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.
Directed Field Studies: Read Less [-]
INTEGRIBI 298 Special Study in Integrative Biology 1 - 12 Units
Terms offered: Fall 2021, Spring 2021, Fall 2020
Graduate research by small groups.
Special Study in Integrative Biology: Read More [+]
Rules & Requirements
Prerequisites: Consent of instructor
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Fall and/or spring: 15 weeks - 0 hours of independent study per week
Additional Details
Subject/Course Level: Integrative Biology/Graduate
Grading: Letter grade.
Special Study in Integrative Biology: Read Less [-]

INTEGRIBI 299 Graduate Research 1 - 12 Units
Terms offered: Fall 2021, Spring 2021, Fall 2020
Credit awarded according to work planned and accomplished.
Graduate Research: Read More [+]
Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Fall and/or spring: 15 weeks - 0 hours of independent study per week
Additional Details
Subject/Course Level: Integrative Biology/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.
Graduate Research: Read Less [-]

INTEGRIBI N299 Graduate Research 1 - 6 Units
Terms offered: Summer 2015 Second 6 Week Session, Summer 2010 10 Week Session, Summer 2007 10 Week Session
Graduate student research.
Graduate Research: Read More [+]
Rules & Requirements
Prerequisites: Graduate standing
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Summer:
6 weeks - 2.5-15 hours of independent study per week
8 weeks - 1-6 hours of independent study per week
Additional Details
Subject/Course Level: Integrative Biology/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.
Graduate Research: Read Less [-]

INTEGRIBI 304 Dissemination of Research: Your Interface with the Public 2 Units
Terms offered: Spring 2018, Spring 2017, Fall 2012
This course will consist of lectures and class discussions about mechanisms of communicating about science to the public. We will consider how to convey the issues, process, and findings of scientific research to a variety of audiences using different media (e.g., posters, web pages, newsletters, newspaper and magazine articles, books, television). Projects conducted by teams of students under the direct supervision of the instructors will include preparation of outreach materials (e.g., posters, newsletters, web pages).
Dissemination of Research: Your Interface with the Public: Read More [+]
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week
Additional Details
Subject/Course Level: Integrative Biology/Professional course for teachers or prospective teachers
Grading: Letter grade.
Dissemination of Research: Your Interface with the Public: Read Less [-]

INTEGRIBI 305 Thriving in Academia 2 Units
Terms offered: Fall 2021, Fall 2020, Fall 2019
Series of lectures and workshops to prepare graduate students for many aspects of academic careers, including grant proposal writing, giving talks at meetings or to academic departments, preparing job applications and having job interviews, advising graduate students and postdocs, reviewing manuscripts and grant proposals, service activities and time management, working at teaching college vs. research universities, alternative careers, etc.
Thriving in Academia: Read More [+]
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of seminar per week
Additional Details
Subject/Course Level: Integrative Biology/Professional course for teachers or prospective teachers
Grading: Offered for satisfactory/unsatisfactory grade only.
Thriving in Academia: Read Less [-]
INTEGBI 375 Teaching Colloquium: Graduate Student Instructor Training 2 Units
Terms offered: Fall 2021, Fall 2020, Fall 2019
Series of workshops and seminars involving graduate students and faculty participation. The main objectives of this course are to train graduate students to become effective instructors and to discuss important issues that graduate students face when teaching undergraduate classes.
Teaching Colloquium: Graduate Student Instructor Training: Read More [+]
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of seminar per week
Additional Details
Subject/Course Level: Integrative Biology/Professional course for teachers or prospective teachers
Grading: Offered for satisfactory/unsatisfactory grade only.
Formerly known as: Integrative Biology 303
Teaching Colloquium: Graduate Student Instructor Training: Read Less [-]

INTEGBI 400 Training in Stable Isotope Methods and Mass Spectrometry 1 Unit
Terms offered: Fall 2021, Fall 2020, Fall 2019
An intensive lecture and laboratory training course on the fundamental principles and practical applications of stable isotope methods in biogeochemistry, ecology, physiology, and environmental science. Topics covered are sample preparation, operating of an isotope ratio mass spectrometer, and analysis of stable isotope data. This course is required for all students interested in using the facilities housed in the Center for Stable Isotope Biogeochemistry for their research.
Training in Stable Isotope Methods and Mass Spectrometry: Read More [+]
Rules & Requirements
Prerequisites: Consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Integrative Biology/Other professional
Grading: Offered for satisfactory/unsatisfactory grade only.
Instructor: Dawson
Training in Stable Isotope Methods and Mass Spectrometry: Read Less [-]

INTEGBI C407 Introduction to Scientific Diving 3 Units
Terms offered: Spring 2017, Spring 2016, Spring 2015
Diving physics, physiology, medicine, rescue, decompression, theory, navigation, environment, marine life, research methods, equipment, and University regulations. Course leads to University certification to use underwater life support apparatus for study or research under University auspices.
Introduction to Scientific Diving: Read More [+]
Rules & Requirements
Prerequisites: Advanced scuba certification, swim test, medical exam, and consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 3 hours of laboratory per week
Additional Details
Subject/Course Level: Integrative Biology/Other professional
Grading: Letter grade.
Instructors: Hayward, Scott
Formerly known as: Integrative Biology C407/Physical Education C407
Also listed as: PHYS ED C407
Introduction to Scientific Diving: Read Less [-]

INTEGBI 601 Individual Study for Master's Students 1 - 8 Units
Terms offered: Spring 2016, Fall 2015, Spring 2015
Individual study for the comprehensive requirements in consultation with the major adviser. Units may not be used to meet either unit or residence requirements for a master's degree.
Individual Study for Master's Students: Read More [+]
Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Fall and/or spring: 15 weeks - 0 hours of independent study per week
Additional Details
Subject/Course Level: Integrative Biology/Graduate examination preparation
Grading: Offered for satisfactory/unsatisfactory grade only.
Individual Study for Master's Students: Read Less [-]
INTEGBI 602 Individual Study for Doctoral Students 1 - 8 Units
Terms offered: Spring 2016, Fall 2015, Spring 2015
Individual study in consultation with the major adviser. Intended to provide an opportunity for qualified students to prepare themselves for the various examinations required for candidates for the Ph.D. Individual Study for Doctoral Students: Read More [+] Rules & Requirements Credit Restrictions: Course does not satisfy unit or residence requirements for doctoral degree. Repeat rules: Course may be repeated for credit without restriction. Hours & Format Fall and/or spring: 15 weeks - 0 hours of independent study per week Additional Details Subject/Course Level: Integrative Biology/Graduate examination preparation Grading: Offered for satisfactory/unsatisfactory grade only. Individual Study for Doctoral Students: Read Less [-]

INTEGBI N602 Individual Study for Doctoral Students 1 - 6 Units
Terms offered: Prior to 2007
Formerly < Paleon 602, Zoology 602, Botany 602, Physiol 602, Anatomy 602> Individual study in consultation with the major field adviser. Intended to provide an opportunity for qualified students to prepare themselves for the various examinations required for candidates for the Ph.D. Individual Study for Doctoral Students: Read More [+] Rules & Requirements Credit Restrictions: Course does not satisfy unit or residence requirements for doctoral degree. Repeat rules: Course may be repeated for credit without restriction.
