Energy and Resources Group

Overview
The Energy and Resources Group (ERG) is an interdisciplinary academic unit of UC Berkeley, conducting programs of graduate teaching and research that treat issues of energy, resources, development, human and biological diversity, environmental justice, governance, global climate change, and new approaches to thinking about economics and consumption. Established in 1973, ERG offers two-year MA and MS degrees in Energy and Resources, as well as a PhD and an undergraduate minor.

The faculty of ERG consists of eight professors of energy and resources plus 100 affiliated faculty members whose main appointments span all five colleges and four of the schools of the Berkeley campus, as well as the University's Lawrence Berkeley and Lawrence Livermore National Laboratories. The chair is normally drawn on a rotating basis from the affiliated faculty.

There are approximately 60 graduate students enrolled in ERG degree programs; about half of them are doctoral candidates. The students come from a wide variety of backgrounds — engineering, natural sciences, social sciences, and humanities. The characteristics they have in common are an interest in interdisciplinary approaches to energy and resource issues and the intellectual credentials to succeed in a rigorous academic program. All receive training at ERG in the technological, environmental, economic, and sociopolitical dimensions of energy and resource issues while pursuing additional course work and individual research tailored to their interest and backgrounds.

ERG graduates are employed across the U.S. and around the world in universities, governmental and international agencies, legislative staff positions, national laboratories, public and private utilities, other energy and resource companies, consulting firms, and public-interest organizations.

Energy and Resources
ENE,RES 24 Freshman Seminar 1 Unit
Terms offered: Fall 2015, Spring 2012, Spring 2011
The Freshman Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Freshman Seminars are offered in all campus departments, and topics may vary from department to department and semester to semester.

Freshman Seminar: Read More [+]

Rules & Requirements
Repeat rules: Course may be repeated for credit when topic changes. Course may be repeated for credit when topic changes.

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of seminar per week

Additional Details
Subject/Course Level: Energy and Resources Group/Undergraduate
Grading/Final exam status: The grading option will be decided by the instructor when the class is offered. Final exam required.

ENE,RES 39A Freshman and Sophomore Seminar: Complex Systems, Information Theory, and Big Data 2 Units
Terms offered: Fall 2016
Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.

### ENE,RES 98 Directed Group Study for Lower Division Students 1 - 4 Units

**Terms offered:** Fall 2018, Fall 2017, Fall 2016

Lectures and small group discussions focusing on topics of interest that vary from semester to semester.

*Directed Group Study for Lower Division Students: Read More [+]*

#### Rules & Requirements

**Credit Restrictions:** Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog.

**Repeat rules:** Course may be repeated for credit under special circumstances: Course may be repeated with consent of department. Course may be repeated with consent of department.

#### Hours & Format

**Fall and/or spring:** 15 weeks - 1-4 hours of directed group study per week

*Additional Details*

**Subject/Course Level:** Energy and Resources Group/Undergraduate

**Grading/Final exam status:** Offered for pass/not pass grade only. Final exam not required.

*Directed Group Study for Lower Division Students: Read Less [-]*

### ENE,RES 99 Supervised Independent Studies for Freshmen and Sophomores 1 - 4 Units

**Terms offered:** Fall 2018, Summer 2018 10 Week Session, Fall 2017, Summer 2017 8 Week Session, Fall 2014

Supervised research on specific topics related to energy and resources.

*Supervised Independent Studies for Freshmen and Sophomores: Read More [+]*

#### Rules & Requirements

**Prerequisites:** Consent of faculty adviser directing research; lower division standing (3.3 GPA or better)

**Credit Restrictions:** Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog.

**Repeat rules:** Course may be repeated for credit without restriction.

#### Hours & Format

**Fall and/or spring:** 15 weeks - 1-4 hours of independent study per week

*Additional Details*

**Subject/Course Level:** Energy and Resources Group/Undergraduate

**Grading/Final exam status:** Offered for pass/not pass grade only. Final exam not required.

*Supervised Independent Studies for Freshmen and Sophomores: Read Less [-]*

### ENE,RES C100 Energy and Society 4 Units

**Terms offered:** Fall 2018, Summer 2018 10 Week Session, Fall 2017

Energy sources, uses, and impacts: an introduction to the technology, politics, economics, and environmental effects of energy in contemporary society. Energy and well-being; energy in international perspective, origins, and character of energy crisis.

*Energy and Society: Read More [+]*

#### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture and 1 hour of discussion per week

**Summer:**

8 weeks - 6 hours of lecture and 1.5 hours of discussion per week

10 weeks - 6 hours of lecture and 1.5 hours of discussion per week

*Additional Details*

**Subject/Course Level:** Energy and Resources Group/Undergraduate

**Grading/Final exam status:** Letter grade. Final exam required.

**Instructor:** Kammen

*Also listed as:* PUB POL C184

*Energy and Society: Read Less [-]*

### ENE,RES 101 Ecology and Society 3 Units

**Terms offered:** Summer 2018 8 Week Session, Summer 2017 8 Week Session, Fall 2014

This course introduces students to the many ways in which our lives are intertwined with the ecosystems around us. Topics will include ecological limits to growth, climate change and other threats to biodiversity, the value of ecosystem goods and services, the ecology of disease, ecotoxicology, the evolution of cooperation in ecosystems, industrial ecology, and the epistemology of ecology.

*Ecology and Society: Read More [+]*

#### Rules & Requirements

**Prerequisites:** One college level course, or high school Advanced Placement, in either physics or biology; introductory calculus

#### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

**Summer:**

6 weeks - 7.5 hours of lecture per week

8 weeks - 6 hours of lecture per week

*Additional Details*

**Subject/Course Level:** Energy and Resources Group/Undergraduate

**Grading/Final exam status:** Letter grade. Final exam required.

**Instructor:** TBA

**ENE,RES 102 Quantitative Aspects of Global Environmental Problems 4 Units**

Human disruption of biogeochemical and hydrological cycles; causes and consequences of climate change and acid deposition; transport and health impacts of pollutants; loss of species; radioactivity in the environment; and quantitative models to understand these environmental problems.

**Course Objectives:** Application of basic principles of natural science to the analysis of human influence on environmental conditions and processes at continental to global scale. Topics covered include dimensions of the physical world and of human modifications of it; techniques of estimation and back of the envelope calculation; box models of environmental stocks and flows: equilibrium and feedback; chemical equilibria in the environment; nutrient cycles and their disruptions; acid deposition and its consequences; climate change and its consequences; stratospheric ozone depletion; sources, fate and effects of toxic substances in the global environment; radioactivity and radiation; macroecology; carrying capacity and human population growth; biodiversity and its diminution; epidemics.

**Student Learning Outcomes:** Students will also have gained insight into the multi-disciplinary nature of environmental science, having used physical, chemical, and biological principles to create and solve analytical models. Students will be familiar with and able to apply a diverse set of quantitative tools for understanding and analyzing environmental problems.

**Rules & Requirements**

**Prerequisites:** Upper division standing; calculus (Mathematics 1A-1B or 16A-16B); Physics (7A-7B or 8A-8B), Chemistry (1A or 4A), Biology (1B), or consent of instructor

**Hours & Format**

Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week

Summer: 8 weeks - 6 hours of lecture and 4 hours of laboratory per week

**Environmental Classics: Read Less [-]**
**ENE,RES 175 Water and Development 4 Units**

Terms offered: Spring 2016, Spring 2014, Spring 2013

This course introduces students to water policy in developing countries. It is a course motivated by the fact that over one billion people in developing countries have no access to safe drinking water, three billion do not have sanitation facilities, and many millions of small farmers do not have reliable water supplies to ensure a healthy crop. Readings and discussions will cover: the problems of water access and use in developing countries; the potential for technological, social, and economic solutions to these problems; the role of institutions in access to water and sanitation; and the pitfalls of the assumptions behind some of today’s popular “solutions.”

**ENE,RES C176 Climate Change Economics 4 Units**

Terms offered: Fall 2018, Fall 2017, Fall 2016

This course is a self-contained introduction to the economics of climate change. Climate change is caused by a large variety of economic activities, and many of its impacts will have economic consequences. Economists have studied climate change for more than two decades, and economic arguments are often powerful in policy decisions. The course will familiarize students with these arguments and equip them with the tools to participate in discussions of climate change policy through an economic lens.

Climate Change Economics: Read More [+]

---

**Objectives Outcomes**

**Course Objectives:** The course will start with a brief review of the science of climate change, discuss scenarios of economic growth and the greenhouse gas emissions caused by economic activities and investigate various emission reduction opportunities and their economic costs. A significant amount of time will be spent on studying the impacts of climate change, their economic evaluation and how adaptation can lower the costs of climate damages.

We will then study various theoretical frameworks economists have developed that answer the question how estimates about the costs and benefits of climate policy can be combined to find “good” climate policies. We then study three more specialized topics that turn out to be of great importance when analyzing climate change policy: first, how do we compare costs and benefits of generations that live many centuries apart? Second, how do we design climate policy when our projections of both the costs and the benefits of climate policy are highly uncertain? And third, how can equity considerations be accounted for in an economic assessment of climate change policy? The course will close with a look at international cooperation on climate policy and why it has been so difficult to agree on effective treatises that implement climate change policy.

**Student Learning Outcomes:** Students will also have gained insight into the practical aspects of modeling the economics of climate change by building a simple integrated assessment model in Excel. They will be able to use that model to do simple analysis of climate change policy themselves.

Students will be familiar with the tools economists use to analyze climate change policy. They will have studied empirical estimates of the costs and benefits of climate policy and have an understanding of the analytical issues that drive research on the economics of climate change.

**Hours & Format**

Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week

Summer: 8 weeks - 6 hours of lecture and 4 hours of laboratory per week

**Additional Details**

**Subject/Course Level:** Energy and Resources Group/Undergraduate

**Grading/Final exam status:** Letter grade. Final exam required.

ENEN,RES N176 Economics of Climate Change 3 Units
Terms offered: Summer 2018 8 Week Session
This course is a self-contained introduction to the economics of climate change. Climate change is caused by a large variety of economic activities, and many of its impacts will have economic consequences. Economists have studied climate change for more than two decades, and economic arguments are often powerful in policy decisions. The course will familiarize students with these arguments and equip them with the tools to participate in discussions of climate change policy through an economic lens. NOTE this summer course does NOT satisfy the EEP Major requirements that the 4-unit course ENERES C176/ENVECON C176/IAS C176 that is offered in the regular academic spring/fall terms. Repeating this course under the C176 course number restricted.

Student Learning Outcomes: Students will be familiar with the tools economists use to analyze climate change policy. They will have studied empirical estimates of the costs and benefits of climate policy and have an understanding of the analytical issues that drive research on the economics of climate change.

Rules & Requirements
Credit Restrictions: Not repeatable under this course number or ENERES C176, ENVECON C176, or IAS C176.<BR/>

ENE,RES 180 Ecological Economics in Historical Context 3 Units
Terms offered: Fall 2016
Economists through history have explored economic and environmental interactions, physical limits to growth, what constitutes the good life, and how economic justice can be assured. Yet economists continue to use measures and models that simplify these issues and promote bad outcomes. Ecological economics responds to this tension between the desire for simplicity and the multiple perspectives needed to understand complexity in order to move toward sustainable, fulfilling, and just economies.

ENE,RES C221 Climate, Energy and Development 3 Units
Terms offered: Fall 2018, Fall 2017, Fall 2016, Fall 2015
Graduate seminar examining the role of energy science, technology, and policy in international development. The course will look at how changes in the theory and practice of energy systems and of international development have co-evolved over the past half-century, and what opportunities exist going forward. A focus will be on rural and decentralized energy use, and the issues of technology, culture, and politics that are raised by both current trajectories, and potential alternative energy choices. We will explore the frequently divergent ideas about energy and development that have emerged from civil society, academia, multinational development agencies, and the private and industrial sector.

**ENE,RES 270 Environmental Classics 3 Units**

Terms offered: Fall 2013, Fall 2011, Fall 2009

Motivation: What is the history and evolution of environmental thinking and writing? How have certain “environmental classics” shaped the way in which we think about nature, society, and development? This course will use a selection of 20th-century books and papers that have had a major impact on academic and wider public thinking about the environment and development to probe these issues. The selection includes works and commentaries related to these works that have influenced environmental politics and policy in the U.S. as well as in the developing world. Through the classics and their critiques, reviews, and commentaries, the class will explore the evolution of thought on these transforming ideas.
