Civil and Environmental Engineering

The Department of Civil and Environmental Engineering (CEE) offers a Master of Science (MS) program, a doctoral degree (PhD) program, and a Master of Engineering (MEng) program.

CEE also offers three concurrent degree programs and two certificate programs.

Master of Science (MS) and Doctor of Philosophy (PhD)

These degrees emphasize the application of the natural sciences to the analysis and solution of engineering problems. Advanced courses in mathematics, chemistry, physics, and the life sciences are normally included in a program that incorporates the engineering systems approach for analysis of problems.

Students in these degree programs select one of the following seven concentrations:

1. Energy, Civil Infrastructure and Climate: The objective of the Energy, Civil Infrastructure and Climate (ECIC) program is to educate a cadre of professionals to analyze complex problems — such as energy efficiency of buildings, environmentally-informed design of transportation systems, embodied energy of construction materials, and electricity from renewable sources, as well as biofuels — from engineering, environmental, economic, and management perspectives. The analysis will be used to address such overarching societal problems as mitigation of greenhouse gas emissions and adaptation of infrastructure to a changing climate. ECIC also promotes research at the intersection of energy, infrastructure, and climate science.

2. Engineering and Project Management: The Engineering and Project Management (E&PM) program educates students for leadership positions in managing infrastructure, especially construction projects, and within field, project, and corporate management. Contemporary project management practice demands that the engineering professionals not only have a mastery of engineering, including construction concepts, but also a strong background in engineering and management methods. E&PM emphasizes new technologies, developments, and techniques in both domestic and international project management and construction, as well as the interrelationships of all life-cycle components: planning, design, manufacturing, construction, operation, maintenance, and end-of-life options.

3. Environmental Engineering: The Environmental Engineering program encompasses air quality engineering (AQE), water quality engineering (WQE), and environmental fluid mechanics and hydrology (EFMH). AQE focuses on indoor microenvironments, plume dispersion, urban and regional air pollution, as well as global changes in climate and atmospheric chemistry. There is an emphasis on environmental and public health issues related to the built environment, including energy and transportation systems. EFMH focuses on physical processes that govern air and water movement, and the associated transport of contaminants, energy, and other scalars. It takes an integrated approach to studies of the coastal ocean and estuaries, the atmospheric boundary layer, surface and subsurface water flow, land-atmosphere interactions, the management of water resource systems, climate change and variability, and contaminant transport. WQE addresses the sources, transport and treatment of chemical and microbiological contaminants that affect water. Research and coursework focus on assessment of the sources, fate and transport of contaminants and the development of natural and engineered treatment systems for chemical contaminants and human pathogens.

4. GeoSystems (Geoengineering): GeoSystems encompasses a broad area of teaching and research in geotechnical and geological engineering, environmental geotechnics, and applied geophysics. GeoSystems’ focus is on the evaluation of engineering properties of geologic materials and on providing engineering solutions for dealing with geologic environment and processes, and natural hazards. Emphasis is on the study of the mechanical behavior of soil and rock masses, laboratory and field characterization of material properties, development and application of geophysical techniques for site and subsurface characterization, development of advanced analysis methods, and evaluation of static and dynamic (seismic) performance of soil deposits, earth structures, and underground space.

5. Structural Engineering, Mechanics, and Materials: The Structural Engineering, Mechanics, and Materials (SEMM) program consists of three emphases: (1) Structural engineering, which is concerned with the analysis and design of all types of structures, including earthquake-resistant design. (2) Structural mechanics, which employs the disciplines of applied mathematics and the engineering sciences to examine problems in the behavior of structural elements and systems, and to investigate the mathematical description of properties. (3) Structural materials engineering, which is concerned with the development of construction materials (e.g., steel, concrete, aluminum alloys, timber, plastic, and composite materials) for engineering projects, such as mechanical and thermal response, microstructure behavior, and durability.

6. Systems (Civil Systems): The focus of the Systems Program is to understand complex large-scale systems and to develop tools for their design and operation. Such systems encompass built elements (infrastructures transportation, structures), societal systems (social networks, populations enterprises), and natural systems (land, water, air). The understanding of how such systems work requires knowledge about the constitutive laws that govern them, such as traffic flow, fluid mechanics, structural mechanics, and smart networks. It also requires an understanding of the theoretical paradigms (e.g., theories of computation and control, optimization, behavioral economics, sensor networks, statistics, and signal processing) that are used to model, control and optimize such systems.

7. Transportation Engineering: The Transportation Engineering (TE) program is concerned with the planning, design, construction, operation, performance, evaluation, maintenance, and rehabilitation of transportation systems and facilities, such as highways, railroads, urban transit, air transportation, logistic supply systems and their terminals. There is an emphasis on the economic and public policy aspects involved in transportation systems as well. TE stresses development of analytic, problem-solving, design, and management skills suitable for public and private sector professional work.

Students in the PhD program have the option of pursuing a designated emphasis (p. 2) (DE) to supplement their study.

Master of Engineering (MEng)

This professional degree emphasizes solving technical, sociological, environmental, and economic problems involved in the design,
construction, and operation of engineering structures, processes, and equipment. Studies include courses in the engineering sciences necessary to the engineering interpretation of the latest scientific developments. Courses in design, operation, humanities, and economics provide a basis for the analysis and solution of problems in professional engineering.

Students in this degree program select either a concentration in Systems (Civil Systems) or Transportation Engineering (see above descriptions). There are options for either full-time or part-time enrollment.

CEE’s MEng program is offered in conjunction with the Fung Institute for Engineering Leadership (http://funginstitute.berkeley.edu).

**Concurrent Degrees**

The concurrent degree program is a formal arrangement of two existing, but separate, master's degree programs, which result in the students earning two master’s degrees. CEE offers the following concurrent degree programs:

1. Structural Engineering (http://ced.berkeley.edu/academics/architecture/programs/concurrent-programs/structural-engineering) and Architecture (http://ced.berkeley.edu/admissions/graduate) (MArch/MS)
2. Transportation Engineering (http://ced.berkeley.edu/academics/city-regional-planning/programs/concurrent-programs/transportation-engineering) and City and Regional Planning (http://ced.berkeley.edu/academics/city-regional-planning) (MCP/MS)
3. Any CEE graduate program and Public Policy (http://socrates.berkeley.edu/~7e6pp) (MPP/MS)

For further information regarding these programs, please see the department’s website (http://www.ce.berkeley.edu/grad/degrees).

**Certificates**

Certificate in Engineering and Business for Sustainability: This program is open to all Berkeley graduate students who meet the EBS Certificate course requirements. The EBS certificate program allows students to tap into multidisciplinary educational resources from the College of Engineering (http://coe.berkeley.edu), Haas School of Business (http://haas.berkeley.edu), Energy and Resources Group (http://erg.berkeley.edu), Goldman School of Public Policy (http://gspp.berkeley.edu), College of Natural Resources (http://nature.berkeley.edu/site), and the School of Public Health (http://sph.berkeley.edu), to learn how to have a lasting beneficial impact on the global environment. For further information regarding this program, see the department's website (http://sustainable-engineering.berkeley.edu).

Certificate in Intelligent Transportation Systems: Jointly sponsored by CEE, the Department of Electrical Engineering & Computer Science and Mechanical Engineering, this program is designed to assist students in studying ITS in a systematic and focused way. Faculty advisers help students design a personalized study program to meet their goals. For more information regarding this program, see the department's website (http://www.ce.berkeley.edu/programs/trans/graduate-requirements).

**Designated Emphasis**

Designated emphases available for CEE doctoral students include:

- Nanoscale Science and Engineering (http://nano.berkeley.edu)
- Computational Science and Engineering (http://cse.berkeley.edu)
- Development Engineering (http://deveng.berkeley.edu)

A designated emphasis is a specialization, such as a new method of inquiry or an important field of application, which is relevant to two or more existing doctoral degree programs. You are required to complete the academic work in the area of specialization and all the requirements of the doctoral program. You must be admitted to the DE before taking the qualifying examination.

**Admission to the University**

**Minimum Requirements for Admission**

The following minimum requirements apply to all graduate programs and will be verified by the Graduate Division:

1. A bachelor’s degree or recognized equivalent from an accredited institution;
2. A grade point average of B or better (3.0);
3. If the applicant comes from a country or political entity (e.g., Quebec) where English is not the official language, adequate proficiency in English to do graduate work, as evidenced by a TOEFL score of at least 90 on the iBT test, 570 on the paper-and-pencil test, or an IELTS Band score of at least 7 (note that individual programs may set higher levels for any of these); and
4. Sufficient undergraduate training to do graduate work in the given field.

**Applicants Who Already Hold a Graduate Degree**

The Graduate Council views academic degrees not as vocational training certificates, but as evidence of broad training in research methods, independent study, and articulation of learning. Therefore, applicants who already have academic graduate degrees should be able to pursue new subject matter at an advanced level without need to enroll in a related or similar graduate program.

Programs may consider students for an additional academic master’s or professional master’s degree only if the additional degree is in a distinctly different field.

Applicants admitted to a doctoral program that requires a master’s degree to be earned at Berkeley as a prerequisite (even though the applicant already has a master’s degree from another institution in the same or a closely allied field of study) will be permitted to undertake the second master’s degree, despite the overlap in field.

The Graduate Division will admit students for a second doctoral degree only if they meet the following guidelines:

1. Applicants with doctoral degrees may be admitted for an additional doctoral degree only if that degree program is in a general area of knowledge distinctly different from the field in which they earned their original degree. For example, a physics PhD could be admitted to a doctoral degree program in music or history; however, a student with a doctoral degree in mathematics would not be permitted to add a PhD in statistics.
2. Applicants who hold the PhD degree may be admitted to a professional doctorate or professional master’s degree program if there is no duplication of training involved.

Applicants may apply only to one single degree program or one concurrent degree program per admission cycle.
Required Documents for Applications

1. Transcripts: Applicants may upload unofficial transcripts with your application for the departmental initial review. If the applicant is admitted, then official transcripts of all college-level work will be required. Official transcripts must be in sealed envelopes as issued by the school(s) attended. If you have attended Berkeley, upload your unofficial transcript with your application for the departmental initial review. If you are admitted, an official transcript with evidence of degree conferral will not be required.

2. Letters of recommendation: Applicants may request online letters of recommendation through the online application system. Hard copies of recommendation letters must be sent directly to the program, not the Graduate Division.

3. Evidence of English language proficiency: All applicants from countries or political entities in which the official language is not English are required to submit official evidence of English language proficiency. This applies to applicants from Bangladesh, Burma, Nepal, India, Pakistan, Latin America, the Middle East, the People’s Republic of China, Taiwan, Japan, Korea, Southeast Asia, most European countries, and Quebec (Canada). However, applicants who, at the time of application, have already completed at least one year of full-time academic course work with grades of B or better at a US university may submit an official transcript from the US university to fulfill this requirement. The following courses will not fulfill this requirement:
   • courses in English as a Second Language,
   • courses conducted in a language other than English,
   • courses that will be completed after the application is submitted, and
   • courses of a non-academic nature.

If applicants have previously been denied admission to Berkeley on the basis of their English language proficiency, they must submit new test scores that meet the current minimum from one of the standardized tests.

Where to Apply
Visit the Berkeley Graduate Division application page (http://grad.berkeley.edu/admissions/apply).

Admission to the Program
In addition to the above University requirements, CEE has minimum graduate admission requirements, listed below. **Note: These are minimum requirements and may not be competitive.

- Sufficient undergraduate education for graduate work in your chosen field.
- Score of the general Graduate Record Examination (GRE) taken during the past five years. CEE does not require a GRE subject test but the General GRE Test is required. Both the “Old” GRE and the “Revised” GRE are accepted.
- If you are pursuing a PhD, a Master’s of Science degree from an accredited university and a minimum GPA of 3.5, OR apply to the MS degree and add the PhD during the first year of the MS program. Direct to PhD admissions is approved on an exception basis.
- In addition, each of the 7 CEE programs has its own admissions prerequisite requirements (see below).

Energy, Civil Infrastructure, and Climate
Prerequisites
- 1 year of college-level calculus
- 1 semester probability and statistics
- 1 semester elementary linear algebra
- 1 year college-level physical science (e.g., PHYSICS 7A and PHYSICS 7B)
- A course in thermodynamics or energy conversion (e.g., ENGIN 115, MEC ENG 40, MEC ENG 254, CHM ENG 141, MEC ENG 146). This can be taken as part of graduate study.

Engineeering and Project Management
Prerequisites
- 1 year college-level calculus
- 1 year college-level physical science (e.g., PHYSICS 7A and PHYSICS 7B)
- 1 semester probability and statistics
- 1 semester elementary linear algebra

Environmental Engineering
Prerequisites
Minimum requirements for entry into the Environmental Engineering program consist of:

- Math: equivalent of 2 years, including calculus, linear algebra and differential equations
- Science: 1 semester of physics, 2 additional semesters of science (physics, chemistry, biology)

Additionally, it is strongly recommended that applicants have:

- Experience with Matlab or other high-level programming language
- Physics and/or chemistry coursework beyond the minimum listed above

The Environmental Engineering program also considers the following courses to be additional prerequisites of the program. These undergraduate courses can be taken during a student’s graduate study, but if they are, the courses would not count towards the graduate degree:

Elementary Fluid Mechanics (CIV ENG 100), Environmental Engineering (CIV ENG 111), Introduction to Hydrology (CIV ENG 103) and Water Chemistry (CIV ENG 115). Either Introduction to Hydrology OR Water Chemistry may be taken as part of the graduate study.

Note: applications from non-engineering students are strengthened if engineering classes, particularly those considered prerequisite to the program, have already been taken at the time of application.

GeoSystems (Geoengineering)
Prerequisites
- Math: equivalent of 2 years, including calculus, linear algebra and differential equations
- Science: 1 semester of physics, 1 semester of chemistry
- Introduction to Solid Mechanics (e.g., CIV ENG C30)
- Engineering Geology (e.g., CIV ENG 70)
- Geotechnical and Geoenviromental Engineering (e.g., CIV ENG 175)
Structural Engineering, Mechanics and Materials

Prerequisites
- 2 years college level calculus (e.g., MATH 1A Calculus MATH 1B or MATH 53 MATH 54)
- 1 year college level physical science (e.g., PHYSICS 7A and PHYSICS 7B PHYSICS 7B (http://guide.berkeley.edu/search/?P=PHYSICS%207B))
- 1 semester probability and statistics (e.g., STAT 20 or CIV ENG 93)
- 1 semester elementary linear algebra
- A GPA for the junior/senior years of at least 3.25

Systems (Civil Systems)

Prerequisites
- 1.5 years college-level calculus
- 1 year college-level physical science (e.g., PHYSICS 7A/P YHISCS 7B)
- 1 semester probability and statistics (See Statistics/linear algebra diagnostic below.)
- 1 semester elementary linear algebra

Transportation Engineering

Prerequisites
- 1 year college-level calculus
- 1 year college-level physical science (e.g., PHYSICS 7A/P YHISCS 7B)
- 1 semester probability and statistics (See Statistics/linear algebra diagnostic below.)
- 1 semester elementary linear algebra

Transportation Engineering requires strong analytical and quantitative preparation, but an engineering degree is not necessary. Applicants must be fluent with quantitative concepts of the above courses. Deficiencies in preparation must be remedied by additional work that may not count toward the degree. Students should discuss their preparation with their faculty adviser.

Statistics/linear algebra diagnostic: Incoming Transportation Engineering students, including transfers from within Berkeley, must take a diagnostic test at the beginning of their first semester in the program to see if their linear algebra and probability and statistics preparation is adequate, i.e., on a level similar to CIV ENG 93. Consisting of 4 or 5 problems, the diagnostic test does not emphasize memorization. Rather, it tests whether students are capable of applying linear algebra and statistical concepts to solve simple transportation problems. If students do not solve most of the problems easily, or do not take the test, they must enroll in CIV ENG 262 during their first semester. This requirement cannot be put off to a later time.

Lack of linear algebra knowledge may be remedied by working through a suitable book, such as the Schaum's Outline Series.

See Example Statistics Diagnostic for First Year TE Grad Students (http://www.ce.berkeley.edu/sites/default/files/assets/programs/trans/Diagnostic2013.pdf)

Curriculum

The doctoral program is research-based and is not solely based on the curricula below. All doctoral students are expected to fulfill a major and two minors which total a minimum of 30 units or its equivalent. Each

PhD student must have a graduate adviser to provide general academic guidance, and a research adviser to supervise the student's dissertation and to assist in identifying funding paths. A minimum 3.5 GPA is required in major course work and a 3.0 in minor course work. Students must have a master's degree from an accredited institution or earn the master's and then continue on for the PhD. An approved program of study is required, a tentative program upon entrance into the PhD and a final program of study before the qualifying examination. During the first or second year, a prequalifying examination is required. The qualifying examination is taken during the third year. For detailed information, see the department website (http://www.ce.berkeley.edu/home?destination=home). All first time graduate student instructors (GSIs) must take during the first semester of teaching CIV ENG 301, a teaching pedagogy course, attend the first time GSI conference the week before the start of the semester, and take an online ethics course prior to the third week of the semester.

Energy, Civil Infrastructure and Climate Concentration (ECIC) (http://www.ce.berkeley.edu/programs/ecic/graduate-requirements)

The major core courses are listed below (10 units). In addition to the major courses, an ECIC doctoral student must take at least 15 units of elective courses (http://www.ce.berkeley.edu/programs/ecic/courses) from each of the following core areas (http://www.ce.berkeley.edu/programs/ecic/courses) (maximum 6 units in any one area): Environment Science & Engineering, Civil Infrastructure, and Economics & Policy.

9 units are required in each of the two minor fields (one minor may be within the CEE).

CIV ENG 107 Climate Change Mitigation 3
CIV ENG 268E Civil Systems and the Environment 3
CIV ENG 292A Technologies for Sustainable Societies 1
CIV ENG 295 Energy Systems and Control 3

Engineering and Project Management Concentration (EPM) (http://www.ce.berkeley.edu/programs/ecic/graduate-requirements)

18 units in EPM are required from the courses below, related to the thesis, along with two approved, complementary minor fields, one comprised of courses outside CEE. The minor typically consists of 8 units from two or three graduate or advanced undergraduate level courses.

CIV ENG 268A Lean Construction Concepts and Methods 3
CIV ENG 268B Lean Construction and Supply Chain Management 3
CIV ENG 268D Law for Engineers 3
CIV ENG 268E Civil Systems and the Environment 3
CIV ENG 268H Advanced Project Planning and Control 3
CIV ENG 268I Business Fundamentals for Engineers 3
CIV ENG 292A Technologies for Sustainable Societies 1

Environmental Engineering Concentration (ENV) (http://www.ce.berkeley.edu/programs/env/graduate-requirements)

For the major field, a minimum of 12 approved units from the list below, or its equivalent. Two minors, minimum 6 units each, for a total of 12 minor units, with one minor outside of CEE and 30 units in total.

CIV ENG 200A Environmental Fluid Mechanics 3
CIV ENG 200B Numerical Methods for Environmental Flow Modeling 3
Vice Chair for Academic Affairs. For Students studying Structural Materials have different minor requirements for minor course lists.

intelligence. See program website for more information. A broad range of courses in addition to the core courses (below) are required. Also required are two minors, one outside the department, selected in consultation with an adviser. A total of 30 units minimum comprise a program of study. See department website for more details.

CIV ENG 301 must be taken concurrently with the first teaching rotation. A final presentation when the dissertation is filed is also required.

Structural Engineering, Mechanics & Materials Concentration (SEMM) (http://www.ce.berkeley.edu/programs/semm/graduate-requirements)

Twenty-one (21) units of SEMM courses for the major field are required. At least 15 units must be the graduate, 200-level courses. For the two minors, one should address the student's technical base and research background and include two graduate level courses. One minor must be in mathematics or statistics in one of these areas: traditional mathematics, modern mathematics, numerical analysis, or statistics. A minor in computer science should cover one of the following areas: databases, computer graphics, software engineering, or artificial intelligence. See program website for more information. Students studying Structural Materials have different minor requirements. For Materials, one minor may be in SEMM and the second outside of CEE. The materials student's program of study is subject to the approval of the Vice Chair for Academic Affairs.

System Engineering Concentration (SYS) (http://www.ce.berkeley.edu/programs/sys/graduate-requirements)

Systems Engineering Concentration (SYS) (http://www.ce.berkeley.edu/programs/sys/graduate-requirements)

Transportation Engineering Concentration (TE) (http://www.ce.berkeley.edu/programs/trans/graduate-requirements)

A broad range of courses in addition to the core courses (below) are required. Also required are two minors, one outside the department, selected in consultation with an adviser. A total of 30 units minimum comprise a program of study. See department website for more details.

Systems Engineering Concentration (SYS) (http://www.ce.berkeley.edu/programs/sys/graduate-requirements)

Transportation Engineering Concentration (TE) (http://www.ce.berkeley.edu/programs/trans/graduate-requirements)

A broad range of courses in addition to the core courses (below) are required. Also required are two minors, one outside the department, selected in consultation with an adviser. A total of 30 units minimum comprise a program of study. See department website for more details.

CIV ENG 220C Transport and Mixing in the Environment
CIV ENG 220A Vadose Zone Hydrology
CIV ENG 203N Surface Water Hydrology
CIV ENG 205B Margins of Quality for Engineered Systems
CIV ENG 209 Design for Sustainable Communities
CIV ENG 210 Control of Water-Related Pathogens
CIV ENG 211A Environmental Physical-Chemical Processes
CIV ENG 211B Environmental Biological Processes
CIV ENG 213 Watersheds and Water Quality
CIV ENG 217 Environmental Chemical Kinetics
CIV ENG 218A Air Quality Engineering
CIV ENG 218B Atmospheric Aerosols
CIV ENG 218C Air Pollution Modeling

GeoSystems Concentration (GEO) (http://www.ce.berkeley.edu/programs/geo/graduate-requirements)

A study list tailored to the student's research interests must be approved by the faculty adviser. The major field consists of 18 units of CEE courses focusing on a GeoSystems area of research. The two minor fields of 8 units each, one of which consists of courses outside CEE, support the dissertation topic. Minimum 30 units overall. Possible courses include:

CIV ENG 270 Advanced Geomechanics
CIV ENG 271 Sensors and Signal Interpretation
CIV ENG 272 Numerical Modelling in Geomechanics
CIV ENG 273 Advanced GeoEngineering Testing and Design
CIV ENG 275 Geotechnical Earthquake Engineering
CIV ENG C276 Seismic Hazard Analysis and Design Ground Motions
CIV ENG 277 Advanced Foundation Engineering
CIV ENG 281 Engineering Geology
CIV ENG 285C Seismic Methods in Applied Geophysics
CIV ENG 286 Digital Data Processing
CIV ENG 290J Advanced Topics in Geotechnical Engineering

CIV ENG 222 Finite Element Methods
CIV ENG 225 Dynamics of Structures
CIV ENG 227 Earthquake-Resistant Design
CIV ENG 228 Advanced Earthquake Analysis
CIV ENG C231 Mechanics of Solids
CIV ENG 232 Structural Mechanics
CIV ENG 233 Computational Mechanics
CIV ENG 234 Computational Inelasticity
CIV ENG C236 Micromechanics
CIV ENG C237 Computational Nano-mechanics
CIV ENG 240 Civil Engineering Materials
CIV ENG 241 Concrete Technology
CIV ENG 244 Reinforced Concrete Structures
CIV ENG 245 Behavior of Reinforced Concrete
CIV ENG 246 Prestressed Concrete Structures
CIV ENG 247 Design of Steel and Composite Structures
CIV ENG 248 Behavior and Plastic Design of Steel Structures
CIV ENG 249 Experimental Methods in Structural Engineering

CIV ENG 200C Transport and Mixing in the Environment
CIV ENG 202A Vadose Zone Hydrology
CIV ENG 203N Surface Water Hydrology
CIV ENG 205B Margins of Quality for Engineered Systems
CIV ENG 209 Design for Sustainable Communities
CIV ENG 210 Control of Water-Related Pathogens
CIV ENG 211A Environmental Physical-Chemical Processes
CIV ENG 211B Environmental Biological Processes
CIV ENG 213 Watersheds and Water Quality
CIV ENG 217 Environmental Chemical Kinetics
CIV ENG 218A Air Quality Engineering
CIV ENG 218B Atmospheric Aerosols
CIV ENG 218C Air Pollution Modeling

GeoSystems Concentration (GEO) (http://www.ce.berkeley.edu/programs/geo/graduate-requirements)

A study list tailored to the student's research interests must be approved by the faculty adviser. The major field consists of 18 units of CEE courses focusing on a GeoSystems area of research. The two minor fields of 8 units each, one of which consists of courses outside CEE, support the dissertation topic. Minimum 30 units overall. Possible courses include:

CIV ENG 270 Advanced Geomechanics
CIV ENG 271 Sensors and Signal Interpretation
CIV ENG 272 Numerical Modelling in Geomechanics
CIV ENG 273 Advanced GeoEngineering Testing and Design
CIV ENG 275 Geotechnical Earthquake Engineering
CIV ENG C276 Seismic Hazard Analysis and Design Ground Motions
CIV ENG 277 Advanced Foundation Engineering
CIV ENG 281 Engineering Geology
CIV ENG 285C Seismic Methods in Applied Geophysics
CIV ENG 286 Digital Data Processing
CIV ENG 290J Advanced Topics in Geotechnical Engineering

Structural Engineering, Mechanics & Materials Concentration (SEMM) (http://www.ce.berkeley.edu/programs/semm/graduate-requirements)

Twenty-one (21) units of SEMM courses for the major field are required. At least 15 units must be the graduate, 200-level courses. For the two minors, one should address the student's technical base and research background and include two graduate level courses. One minor must be in mathematics or statistics in one of these areas: traditional mathematics, modern mathematics, numerical analysis, or statistics. A minor in computer science should cover one of the following areas: databases, computer graphics, software engineering, or artificial intelligence. See program website for more information. Students studying Structural Materials have different minor requirements. For Materials, one minor may be in SEMM and the second outside of CEE. The materials student's program of study is subject to the approval of the Vice Chair for Academic Affairs.
Curriculum

Each program has two options for the MS degree: Plan I is a thesis option, usually two years in duration, with a minimum of 20 units of course work plus research, and Plan II is a 9-month plan, including a comprehensive exam or project (paper) with at least 24 units of course work. No more than 4 units of research (CIV ENG 299) may count towards the overall units required. These courses may not count towards the total units of the degree: CIV ENG 297, CIV ENG 298, CIV ENG 301, CIV ENG 601, CIV ENG 602. A minimum of 12 units must be taken per semester. See the department website (http://www.ce.berkeley.edu/grad) for detailed and current degree program information.

Energy, Civil Infrastructure & Climate Concentration (ECIC) (http://www.ce.berkeley.edu/programs/ecic/graduate-requirements)

Thesis option: the core courses below, plus at least 6 units from courses (http://www.ce.berkeley.edu/programs/ecic/courses) in the three core areas (http://www.ce.berkeley.edu/programs/ecic/courses), Environmental Science and Engineering, Civil Infrastructure, and Economics and Policy, but no more than 3 units in any one area. A thesis signed by three committee members, one preferably outside the department, is also required.

Comprehensive Exam option: the core courses below plus 9 units from courses (http://www.ce.berkeley.edu/programs/ecic/courses) in the three core areas (http://www.ce.berkeley.edu/programs/ecic/courses) of Environmental Science and Engineering, Civil Infrastructure, and Economics and Policy, but no more than 6 units in any one area. Must include 12 graduate level units in CEE. The written comprehensive examination will take place at the end of the spring semester.

Engineering & Project Management Concentration (EPM) (http://www.ce.berkeley.edu/programs/epm/graduate-requirements)

Thesis option: at least 8 units from the list below, not including CIV ENG 298. Remaining courses, minimum 12 units, comes from courses approved by the faculty adviser. No more than 4 units of CE 299 may count. A thesis with a three-person committee is required with two CEE members, at least one from EPM.

Comprehensive Exam option: 12 units from the list below are required, not including CIV ENG 298, and 12 units from a course list approved by the faculty adviser. No more than 4 units of CE 299 may count. A written comprehensive examination is required in the spring.

Environmental Engineering Concentration (ENV) (http://www.ce.berkeley.edu/programs/env/graduate-requirements)

Thesis option: minimum 20 units with 8 units of graduate level courses in the major with no more than 4 units of CIV ENG 299. Individualized study list must be approved by adviser and a thesis approved by a committee of three, including two environmental faculty and preferably one member outside CEE.

Comprehensive Exam option: minimum 24 units with 12 units of graduate level courses in the major with no more than 4 units of CIV ENG 299. Individualized study list plus three courses from following (must be from different areas) as well as a written comprehensive exam in fall or spring.

GeoSystems Engineering Concentration (GEO) (http://www.ce.berkeley.edu/programs/geo/graduate-requirements)

Thesis option: 20 units with 9 in approved graduate courses and the remaining 11 units from a list approved by the faculty adviser. The remaining units may be CIV ENG 299 research units. Minimum 12 units per semester.

Comprehensive option: 24 units with 12 in approved graduate courses. A written report from at least 3 units of CIV ENG 299 or a capstone project from CIV ENG 273 is required.

Structural Engineering, Mechanics & Materials Concentration (SEMM) ([http://www.ce.berkeley.edu/programs/semm/graduate-requirements](http://www.ce.berkeley.edu/programs/semm/graduate-requirements))

Thesis option: at least 8 units from the list below. Remaining courses, minimum 12 units, must be approved by the faculty adviser. No more than 4 units of CIV ENG 299 may count. A thesis with a three-person committee is required with two CEE members.

To assure sufficient breadth and depth, students are required to take, in addition to the fundamentals, courses in the following areas:

- Transportation Engineering students: take one course in each area of Policy, Modal, and Analysis
- Transportation Systems students: take one course in each area of Modal, Analysis, and Systems
- Joint MS/MCP (City and Regional Planning): take a total of three courses in both Modal and Analysis

No course can count in more than one area.

Transportation Engineering Concentration (TE) ([http://www.ce.berkeley.edu/programs/trans/graduate-requirements](http://www.ce.berkeley.edu/programs/trans/graduate-requirements))

Thesis option: minimum 8 units of the required 20 must be graduate transportation courses; 2 units may be in CE 299, individual study. The remaining 12 units (made up of undergraduate and graduate courses) can include 2 more units of CE 299.

To assure sufficient breadth and depth, students are required to take, in addition to the fundamentals, courses in the following areas:

- Transportation Engineering students: take one course in each area of Policy, Modal, and Analysis
- Transportation Systems students: take one course in each area of Modal, Analysis, and Systems
- Joint MS/MCP (City and Regional Planning): take a total of three courses in both Modal and Analysis

No course can count in more than one area.

Curriculum

This professional degree emphasizes solving technical, sociological, environmental, and economic problems involved in the design, construction, and operation of engineering structures, processes, and equipment. The curriculum is comprised of 12 units of technical courses and 13 units of professionally-oriented leadership courses taught in conjunction with the Fung Institute. A capstone project approved by two faculty members, one from the home program, is required at the end of the spring semester. Both concentrations offer full and part-time options. You can find information about these and other programs on the Fung Institute website which includes details on part-time/full time enrollment (http://funginstitute.berkeley.edu/programs/how-apply), curriculum models (http://funginstitute.berkeley.edu/programs/curriculum-model), and possible career paths (http://funginstitute.berkeley.edu/programs-master-engineering/career-paths) of graduates.

Students must have a BS degree in an accredited engineering curricula or satisfy the equivalent of a BS degree in engineering as determined by the department. See program requirements (http://www.ce.berkeley.edu/grad/degrees/requirements).

Systems Engineering Concentration (Large Cyber-Physical Systems) (http://www.ce.berkeley.edu/programs/sys/graduate-requirements)

This program prepares a student to use computational innovations for sensor networks, cloud computing, behavioral science, mobile communications and distributed parameter control to create entrepreneurial solutions for industries such as transportation, water, or energy.

Civil and Environmental Engineering

CIV ENG 200A Environmental Fluid Mechanics 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
Fluid mechanics of the natural water and air environment. Flux equation analyses; unsteady free surface flow; stratified flow; Navier-Stokes equations; boundary layers, jets and plumes; turbulence, Reynolds equations, turbulence modeling; mixing, diffusion, dispersion, and contaminant transport; geophysical flows in atmosphere and ocean; steady and unsteady flow in porous media. Application to environmentally sensitive flows in surface and groundwater and in lower atmosphere.

Environmental Fluid Mechanics: Read More [+]

Rules & Requirements
Prerequisites: 100; Mathematics 53, 54 or equivalents
Credit Restrictions: Students will receive no credit for 200A after taking 105 before fall 1999.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Chow, Stacey

Environmental Fluid Mechanics: Read Less [-]

CIV ENG 200B Numerical Methods for Environmental Flow Modeling 3 Units
Terms offered: Spring 2018, Spring 2017, Spring 2015
Introduction to numerical methods with application to environmental flows (atmospheric, surface water, and subsurface flows). Scalar advection/diffusion equations used to study finite difference schemes, numerical errors and stability. Methods introduced for solving Navier-Stokes equations and for turbulence modeling with Reynolds-averaging and large-eddy simulation. Basic programming skills required for hands-on exercises.

Numerical Methods for Environmental Flow Modeling: Read More [+]

Rules & Requirements
Prerequisites: 200A or consent of instructor
Repeat rules: Course may be repeated for credit when topic changes. Course may be repeated for credit when topic changes.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Chow

Numerical Methods for Environmental Flow Modeling: Read Less [-]

CIV ENG 200C Transport and Mixing in the Environment 3 Units
Terms offered: Spring 2017, Spring 2016, Spring 2014
Application of fluid mechanics to transport and mixing in the environment. Fundamentals of turbulence, turbulent diffusion, and shear dispersion in steady and oscillatory flows and the effects of stratification. Application to rivers, wetlands, lakes, estuaries, the coastal ocean, and the lower atmosphere.

Transport and Mixing in the Environment: Read More [+]

Rules & Requirements
Prerequisites: 100, Math 53 and 54, or equivalent

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Stacey
Formerly known as: 209A
Transport and Mixing in the Environment: Read Less [-]
CIV ENG 202A Vadose Zone Hydrology 3 Units
Terms offered: Spring 2018, Spring 2016, Spring 2013
Course addresses fundamental and practical issues in flow and transport phenomena in the vadose zone, which is the geologic media between the land surface and the regional water table. A theoretical framework for modeling these phenomena will be presented, followed by applications in the areas of ecology, drainage and irrigation, and contaminant transport. Hands-on applications using numerical modeling and analysis of real-life problems and field experiments will be emphasized.

Vadose Zone Hydrology: Read More [+]

Rules & Requirements
Prerequisites: 173 or equivalent
Credit Restrictions: Students will receive no credit for 202A after taking 202 before fall 1998.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Rubin

CIV ENG 203A Graduate Hydrology 3 Units
Terms offered: Fall 2014
Hydrology is presented and analyzed in the context of a continuum extending from the atmosphere to the land surface to the subsurface to free water bodies. In this class, we develop the theoretical frameworks required to address problems that both lie within individual components and span these traditionally separate environments. Starting from a development of the fundamental dynamics of fluid motion, we examine applications within the subsurface, the atmosphere and surface water systems.

Graduate Hydrology: Read More [+]

Rules & Requirements
Prerequisites: 103 or equivalent, or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Thompson, Rubin

CIV ENG 203N Surface Water Hydrology 3 Units
Terms offered: Spring 2018, Fall 2016, Fall 2015
Course addresses topics of surface water hydrology, such as processes of water in the atmosphere, over land surface, and within soil; advanced representation and models for infiltration and evapotranspiration processes; partition of water and energy budgets at the land surface; snow and snowmelt processes; applications of remote sensing; flood and drought, and issues related to advanced hydrological modeling. Students will address practical problems and will learn how to use the current operational hydrologic forecasting model, and build hydrological models.

Surface Water Hydrology: Read More [+]

Rules & Requirements
Prerequisites: 103 or equivalent, or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Formerly known as: 203

CIV ENG 205B Margins of Quality for Engineered Systems 3 Units
Terms offered: Fall 2009, Fall 2007, Fall 2000
Processes and procedures to define and determine the demands and capacities of the structures and hardware elements of engineered systems during their life-cycles: margins of quality. The objective of this course is to provide students with the knowledge and skills to define and evaluate system demands, capacities, and reliability targets to be used in design, requalification, construction, operation, maintenance, and decommissioning of engineered systems.

Margins of Quality for Engineered Systems: Read More [+]

Rules & Requirements
Prerequisites: 125, 193 or equivalents and senior design experience

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Bea

Margins of Quality for Engineered Systems: Read Less [-]
CIV ENG 206 Water Resources Management 3 Units
Terms offered: Spring 2018, Spring 2003, Spring 2002
The course provides a framework to address contemporary water-resources problems, and to achieve water security for local areas and broader regions. Students will become aware of critical water-resources issues at local, national and global scales, and learn to formulate solutions for water-resources problems using engineering, natural-science and social-science tools. The main focus is on California and the Western United States, with comparative analysis for other regions.
Water Resources Management: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing or senior undergrad with consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Bales

Water Resources Management: Read Less [-]

CIV ENG 209 Design for Sustainable Communities 3 Units
Terms offered: Spring 2016, Spring 2015, Spring 2014
This course provides conceptual and hands-on experience in design and implementation of innovative products or processes for improving the sustainability of resource-constrained communities (mostly poor ones in the developing countries). Teams of students will take on practical projects, with guidance from subject experts.
Design for Sustainable Communities: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Gadgill

Design for Sustainable Communities: Read Less [-]

CIV ENG 210 Control of Water-Related Pathogens 3 Units
Terms offered: Spring 2018, Spring 1996
Comprehensive strategies for the assessment and control of water-related human pathogens (disease-causing microorganisms). Transmission routes and life cycles of common and emerging organisms, conventional and new detection methods (based on molecular techniques), human and animal sources, fate and transport in the environment, treatment and disinfection, appropriate technology, regulatory approaches, water reuse.
Control of Water-Related Pathogens: Read More [+]

Rules & Requirements
Prerequisites: Basic course in microbiology recommended; graduate standing or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Nelson

Control of Water-Related Pathogens: Read Less [-]

CIV ENG 211A Environmental Physical-Chemical Processes 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
Fundamental concepts of physical-chemical processes that affect water quality in natural and engineered environmental systems. Focus is on developing a qualitative understanding of mechanisms as well as quantitative tools to describe, predict, and control the behavior of physical-chemical processes. Topics include reactor hydraulics and reaction kinetics, gas transfer, adsorption, particle characteristics, flocculation, gravitational separations, filtration, membranes, and disinfection.
Environmental Physical-Chemical Processes: Read More [+]

Rules & Requirements
Prerequisites: Civil and Environmental Engineering 111 or equivalent and course work in aquatic chemistry, or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Nelson

Environmental Physical-Chemical Processes: Read Less [-]
CIV ENG 211B Environmental Biological Processes 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
Fundamental concepts of biological processes that are important in natural and engineered environmental systems, especially those affecting water quality. Incorporates basic fundamentals of microbiology into a quantifiable engineering context to describe, predict, and control behavior of environmental biological systems. Topics include the stoichiometry, energetics and kinetics of microbial reactions, suspended and biofilm processes, carbon and nutrient cycling, and bioremediation applications. Environmental Biological Processes: Read More [+]

Rules & Requirements
Prerequisites: Civil and Environmental Engineering 111 or equivalent and course work in microbiology, or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Alvarez-Cohen

Environmental Biological Processes: Read Less [-]

CIV ENG 213 Watersheds and Water Quality 3 Units
Terms offered: Fall 1996
Overview of approaches used by engineers to preserve or improve water quality at the watershed scale. Characterization and modeling of nutrients, metals, and organic contaminants in watersheds. Application of ecosystem modification and pollutant trading to enhance water quality. The course emphasizes recent case studies and interdisciplinary approaches for solving water quality problems.

Watersheds and Water Quality: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor

Credit Restrictions: Students will receive no credit for 213 after taking 290C.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Sedlak

Watersheds and Water Quality: Read Less [-]

CIV ENG 217 Environmental Chemical Kinetics 3 Units
Terms offered: Spring 2017, Spring 2015, Spring 2014

Environmental Chemical Kinetics: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor; 115 or 214 or equivalent

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Sedlak

Environmental Chemical Kinetics: Read Less [-]

CIV ENG 218A Air Quality Engineering 3 Units
Terms offered: Fall 2017, Spring 2017, Spring 2016
Quantitative overview of the characterization and control of air pollution problems. Summary of fundamental chemical and physical processes governing pollutant behavior. Analysis of key elements of the air pollution system: sources and control techniques, atmospheric transformation, atmospheric transport, modeling, and air quality management.

Air Quality Engineering: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing in engineering or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Nazaroff, Harley

Air Quality Engineering: Read Less [-]
**CIV ENG 218B Atmospheric Aerosols 3 Units**
Terms offered: Spring 2013, Fall 2008, Spring 2006

**Rules & Requirements**
**Prerequisites:** Graduate standing or consent of instructor. Civil and Environmental Engineering 218A recommended

**Hours & Format**
Fall and/or spring: 15 weeks - 1 hour of lecture and 3 hours of lecture per week

**Additional Details**
**Subject/Course Level:** Civil and Environmental Engineering/Graduate

**Grading:** Letter grade.

**Instructor:** Nazaroff

**Atmospheric Aerosols: Read More [+]**

**CIV ENG 219 Fluid Flow in Environmental Processes 3 Units**
Terms offered: Spring 2018, Spring 2008, Fall 2005
Transport and mixing of solutes in water. Focus on rivers, lakes, estuaries, and wetlands, with some discussion of groundwater and the atmosphere. Basic equations of fluid motion will be used to contextualize and/or derive applied empirical equations for use in specific cases of applied environmental engineering practice. Example applications include outfalls, total maximum daily loads, residence time, and longitudinal dispersion.

**Rules & Requirements**
**Prerequisites:** Graduate standing or senior undergrad with consent of instructor

**Hours & Format**
Fall and/or spring: 15 weeks - 3 hours of lecture per week

**Additional Details**
**Subject/Course Level:** Civil and Environmental Engineering/Graduate

CIV ENG 220N Nonlinear Structural Analysis
3 Units
Terms offered: Spring 2018, Spring 2017
Nonlinear Structural Analysis: Read More [+]
Rules & Requirements
Prerequisites: Civ Eng 121 or equivalent
Credit Restrictions: Students who have previously taken Civ Eng 221 will not receive credit for this course
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Filippou
Nonlinear Structural Analysis: Read Less [-]

CIV ENG 222 Finite Element Methods 3 Units
Finite Element Methods: Read More [+]
Rules & Requirements
Prerequisites: 220 or equivalent, 131 or 231
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Filippou, Govindjee
Finite Element Methods: Read Less [-]

CIV ENG 223 Earthquake Protective Systems
3 Units
Terms offered: Spring 2018, Fall 2015, Fall 2013
Conceptual basis for earthquake protective systems including seismic isolation and energy absorbing techniques. Design rules for seismic isolation, energy absorbing and self-centering systems. Characteristics of isolation bearings, frictional, metallic and energy absorbing devices, code provision for earthquake protective systems. Applications to new and existing structures.
Earthquake Protective Systems: Read More [+]
Rules & Requirements
Prerequisites: 220, 225, or consent of instructor
Credit Restrictions: Students will receive no credit for 223 after taking 290D.
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Mahin, Panagiotou
Formerly known as: 290D
Earthquake Protective Systems: Read Less [-]
CIV ENG W224A Introduction to Earthquake Engineering 3 Units
Terms offered: Prior to 2007
Introduction to key concepts in earthquake engineering, including engineering seismology, dynamics of single-degree-of-freedom systems, earthquake ground motions, seismic hazard assessment, performance-based earthquake engineering, geotechnical design for earthquakes, and structural design for earthquakes.
Introduction to Earthquake Engineering: Read More [+]

Objectives Outcomes
Course Objectives: The goal of this course is to provide students with introductory knowledge of earthquake engineering to serve as the basis for more advanced and specialized courses to follow. This knowledge aims towards general exposure to elements of earthquake hazard, ground motion, structural dynamics, and design and evaluation of structural systems. An important objective of this introductory course is to emphasize the importance of risk analysis and performance-based earthquake engineering

Rules & Requirements
Prerequisites: Civil and Environmental Engineering 120, 175, 122N, 123N or equivalent

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of web-based lecture per week
Online: This is an online course.

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Mosalam, Bray

Introduction to Earthquake Engineering: Read Less [-]

CIV ENG W224B Linear Analysis of Structural and Geotechnical Systems 3 Units
Terms offered: Prior to 2007
Methods of linear static and dynamic analysis of structural and geotechnical systems; displacement method of analysis and direct stiffness implementation; modeling of structural and geotechnical systems; 1d and 2d finite elements; equations of motions; modal analysis and direct integration; linear response evaluation methods.
Linear Analysis of Structural and Geotechnical Systems: Read More [+]

Objectives Outcomes
Course Objectives: The goal of this course is to provide students with background knowledge of the linear elastic response of structural and geotechnical systems. The modules introduce the students to the modeling of structures and foundations, the concepts of the displacement method of analysis for skeletal structures and to basic concepts of finite element analysis. The modules also cover the modal analysis of multi-degree of freedom elastic systems. The assigned homework enables students to analyze and evaluate the linear elastic static and dynamic response of structural systems.

Rules & Requirements
Prerequisites: Civil and Environmental Engineering C30/Mechanical Engineering C85; Civil and Environmental Engineering 120, 121 and 175 or equivalent

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of web-based lecture per week
Online: This is an online course.

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Filippou, Chopra, Pestana

Linear Analysis of Structural and Geotechnical Systems: Read Less [-]
CIV ENG W224C Earthquake Geotechnical Engineering 3 Units
Terms offered: Prior to 2007
Earthquake surface fault rupture, earthquake ground motions; influence of soil conditions on seismic site response; seismic site response analysis; evaluation and modeling of dynamic soil properties; seismic performance of foundations and soil structure interaction; evaluation and mitigation of soil liquefaction and its consequences; seismic slope stability and displacement analysis; seismic safety of dams, levees, embankments; seismic design of earth retaining structures.
Earthquake Geotechnical Engineering: Read More [+] Objectives Outcomes
Course Objectives: The goal of this course is to familiarize students with the field of earthquake geotechnical engineering. Lectures focus on describing earthquake hazards and developing methods used for seismic analysis and design in geotechnical engineering. Assigned problems and projects reinforce essential concepts and provide realistic applications of prevalent analytical procedures. Readings provide necessary background information and are an essential component of the course.
Rules & Requirements
Prerequisites: Civil and Environmental Engineering W224A or equivalent
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of web-based lecture per week
Online: This is an online course.
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Bray, Seed
Earthquake Geotechnical Engineering: Read Less [-]

CIV ENG W224D Nonlinear Analysis of Structural and Geotechnical Systems 3 Units
Terms offered: Prior to 2007
Response of structural systems with nonlinear materials under large displacements; event-to-event analysis for simple material response; nonlinear solution strategies; linear stability analysis; second order analysis; section analysis for nonlinear material response (moment-curvature, interaction diagrams); truss and beam-column elements with nonlinear materials; nonlinear time history analysis of structures; case studies of nonlinear response.
Nonlinear Analysis of Structural and Geotechnical Systems: Read More [+] Objectives Outcomes
Course Objectives: The goal of this course is to provide students with background knowledge of the nonlinear response of structural systems. The modules cover the nonlinear response of materials and structural components as well as the nonlinear response of structures under large displacements. The modules also cover the numerical methods for the static and transient response of structures. The assigned homework enables students to analyze and evaluate the response of structural systems under extreme load and environmental conditions inducing large inelastic strains of structural materials and large displacements of structural systems.
Rules & Requirements
Prerequisites: Civil and Environmental Engineering W224B
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of web-based lecture per week
Online: This is an online course.
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Filippou, McKenna
Nonlinear Analysis of Structural and Geotechnical Systems: Read Less [-]
CIV ENG W224E Earthquake Resistant Design 2 Units
Terms offered: Prior to 2007

Objectives
Course Objectives: The goal of this course is to provide students with skills in the evaluation and design of earthquake-resistant structures. The course brings together knowledge of engineering seismology, geotechnical engineering, and structural engineering learned in previous courses and develops concepts and analytical methods for earthquake engineering. An overall objective is for students to understand the characteristics of earthquake-resistant construction and to recognize the basic structural framing systems that are commonly in use.

Rules & Requirements
Prerequisites: Civil and Environmental Engineering W224A, W224C, W224D or equivalents

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of web-based lecture per week
Online: This is an online course.

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Mahin, Panagiotou

Earthquake Resistant Design: Read More [+]

CIV ENG W224F Risk Analysis and Decision Making 2 Units
Terms offered: Prior to 2007
Risk analysis and seismic policy issues for pre-event planning and post-event recovery: Topics will include national and local policies governing seismic safety, risk modeling, resilience metrics and lessons from policy and planning before and after recent major events in Japan, New Zealand, Italy, China, Haiti, Chile, and others.

Objectives
Course Objectives: The goal of this course is to expose students to risk and decision-making aspects that influence planning for earthquakes and post-earthquake recovery. The modules consist of a series of real-world case studies that reveal policies that govern seismic safety, models for risk assessment, and community resilience. A unique objective of this course is to expose students to aspects of earthquake engineering that are outside the usual realm of engineering and reside instead in areas of public policy, economics, and decision-making.

Rules & Requirements
Prerequisites: Civil and Environmental Engineering W224A

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of web-based lecture per week
Online: This is an online course.

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Comerio, Moehle

Risk Analysis and Decision Making: Read Less [-]
CIV ENG W224G Earthquake Resistant Concrete Structures 2 Units
Terms offered: Prior to 2007
Design methods for earthquake-resistant concrete construction; materials including confined concrete; design of beams, columns, and walls; structural diaphragms; foundations; conventional construction and hybrid construction; applications for buildings and bridges.
Earthquake Resistant Concrete Structures: Read More [+]

Objectives

Course Objectives: The goal of this course is to provide students with a working knowledge of how reinforced concrete structures respond to earthquakes and how to design such structures to be earthquake-resistant. The modules introduce students to common forms of concrete construction and analytical methods for establishing requirements for such structures. The assigned homework enables students to develop experience in analyzing and designing earthquake-resistant concrete structures.

Rules & Requirements

Prerequisites: Civil and Environmental Engineering 123N or equivalent; Civil and Environmental Engineering W224A, W224D, W224E may be taken concurrently

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of web-based lecture per week
Online: This is an online course.

Additional Details

Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Moehle, Panagiotou

CIV ENG W224H Earthquake-Resistant Steel Structures 2 Units
Terms offered: Prior to 2007
Design methods for earthquake-resistant steel structures; material properties of steel, welds, and bolts; design of tension members, beams, columns, and beam-columns; connections including shear and moment connections, gusset plates, and base plates; floor diaphragms; lateral force resisting systems; concentrically braced frames; moment frames; eccentrically braced frames; steel shear walls; applications to buildings and bridges.
Earthquake-Resistant Steel Structures: Read More [+]

Objectives

Course Objectives: The goal of this course is to provide students with a working knowledge of how steel structures respond to earthquakes and how to design such structures to be earthquake-resistant. The modules introduce students to common steel structural framing systems to resist gravity and lateral forces and concepts and methods for seismic design of such structures. The assigned homework enables students to develop experience in analyzing and designing earthquake-resistant steel structures.

Rules & Requirements

Prerequisites: CE W224A, CE W224D, CE W224E

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of web-based lecture per week
Online: This is an online course.

Additional Details

Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Astaneh
CIV ENG W224I Dynamic Response of Foundations/Soil-Structure Interaction 2 Units
Terms offered: Prior to 2007
Dynamic response of foundations, design of foundations to resist seismic loading, influence of liquefaction on deep foundations, soil-structure interaction.
Dynamic Response of Foundations/Soil-Structure Interaction: Read More [+]
Objectives Outcomes

Course Objectives: The objective of the course is to provide in depth coverage of seismic soil-structure interaction as it pertains to seismic design of major foundation elements: footings, piles and piers; and seismic design of various types of retaining structures. To this end case histories will be used to illustrate past experience and then current analysis and design methods will be covered in detail. Assignments will be structured to provide students with the necessary tools for application of the methods in design of new structures. Building code provisions will be reviewed to the extent that they apply in this context.

Rules & Requirements
Prerequisites: CE W224C and CE W 224E

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of web-based lecture per week
Online: This is an online course.

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Sitar, Mosalam

Dynamic Response of Foundations/Soil-Structure Interaction: Read Less [-]

CIV ENG W224J Performance-Based Earthquake Engineering 2 Units
Terms offered: Prior to 2007
Fundamentals and evolution of Performance-Based Earthquake Engineering (PBEE). Probabilistic framework of PBEE. PBEE components: ground motion intensity measures, engineering demand parameters, damage measure, and decision variable. Multidisciplinary aspects of PBEE. Case studies of applications of PBEE.
Performance-Based Earthquake Engineering: Read More [+]
Objectives Outcomes

Course Objectives: The objective of this course is to bring together all of the concepts learned in previous and concurrent courses and develop an understanding of the methods of performance-based earthquake engineering. This is done through a series of modules that introduce the framework for performance-based earthquake engineering and also cover the framework from seismology through decision-making. The assigned homework enables students to develop experience in using and combining these basic elements, finally bringing them together in a term project that serves as a demonstration of mastery in performance-based earthquake engineering.

Rules & Requirements
Prerequisites: CE W225E and CE W224F

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of web-based lecture per week
Online: This is an online course.

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Bozorgnia, Mahin

Performance-Based Earthquake Engineering: Read Less [-]
CIV ENG 225 Dynamics of Structures 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
Evaluation of deformations and forces in structures, idealized as single-degree of freedom or discrete-parameter multi-degree of freedom systems, due to dynamic forces. Evaluation of earthquake-induced deformations and forces in structures by linear response history analysis; estimation of maximum response by response spectrum analysis; effects of inelastic behavior. Laboratory demonstrations.

Rules & Requirements
Prerequisites: 220 (may be taken concurrently) or equivalent

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Chopra

CIV ENG 226 Stochastic Structural Dynamics 3 Units
Terms offered: Spring 2016, Spring 2014, Spring 2012

Rules & Requirements
Prerequisites: 225

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Der Kiureghian

CIV ENG 227 Earthquake-Resistant Design 3 Units

Rules & Requirements
Prerequisites: 220 and 225

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Mahin, Moehle

CIV ENG 228 Advanced Earthquake Analysis 3 Units
Terms offered: Spring 2015, Spring 2013, Spring 2012

Rules & Requirements
Prerequisites: 225

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Chopra
CIV ENG 229 Structural System Reliability 3 Units
Terms offered: Spring 2015, Spring 2013, Spring 2011

Rules & Requirements
Prerequisites: Graduate standing

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Der Kiureghian

CIV ENG 232 Structural Mechanics 3 Units
Terms offered: Spring 2018, Spring 2016, Spring 2015
The goal of this course is to study the theories of structural mechanics within the framework of nonlinear continuum mechanics of solids. Finite elasticity; invariance. Energy principles: principles of virtual and complementary virtual work; primary and mixed variational principles. Theory of stability: Euler method; stability under follower loads. Classical theories of beams: planar, torsional, and lateral buckling. Plate theories. Invariant theories of structural mechanics: directed continua; Cosserat theories of rods.

Rules & Requirements
Prerequisites: 231 or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Armero

CIV ENG C231 Mechanics of Solids 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor
Credit Restrictions: Students will receive no credit for 231 after taking 231A or 231B prior to Fall 1992.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Govindjee
Also listed as: MAT SCI C211

CIV ENG 233 Computational Mechanics 3 Units
Terms offered: Fall 2016, Fall 2014, Fall 2012

Rules & Requirements
Prerequisites: 222, or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Armero

Mechanics of Solids: Read Less [-]
CIV ENG 234 Computational Inelasticity 3 Units
Terms offered: Spring 2011, Fall 2007, Fall 2005
Computational methods applied to inelastic deformations of solids; 1, 2, and 3-D large and small-deformation continuum plasticity and viscoelasticity models and their algorithmic approximations; viscoplastic regularizations and softening; thermodynamics and its relationship to algorithmic stability; return mappings, closest-point projections and operator splits; application to metals, soils, concrete, and polymers and incorporation into finite element codes.

Rules & Requirements
Prerequisites: 231 or Materials Science and Engineering 211 or Mechanical Engineering 185

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Armero, Govindjee

Introduction to Statistical Mechanics for Engineers 3 Units
Terms offered: Spring 2017, Fall 2013, Fall 2012

Rules & Requirements
Prerequisites: CE C231 or MSE C211 or ME 185 or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Govindjee, Papadopoulos
Also listed as: MEC ENG C279
CIV ENG C236 Micromechanics 3 Units
Terms offered: Spring 2018, Spring 2016, Spring 2014
Basic theories, analytical techniques, and mathematical foundations of micromechanics. It includes: 1. physical micromechanics, such as mathematical theory of dislocation, and cohesive fracture models; 2. micro-elasticity that includes Eshelby’s eigenstrain theory, comparison variational principles, and micro-crack/micro-cavity based damage theory; 3. theoretical composite material that includes the main methodologies in evaluating overall material properties; 4. meso-plasticity that includes meso-damage theory, and the crystal plasticity; 5. homogenization theory for materials with periodic structures.
Micromechanics: Read More [+]

Rules & Requirements
Prerequisites: Consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Also listed as: MAT SCI C214
Micromechanics: Read Less [-]

CIV ENG C237 Computational Nano-mechanics 3 Units
Terms offered: Spring 2018, Spring 2017, Fall 2014
Basic mathematics foundations, physical models, computational formulations and algorithms that are used in nanoscale simulations and modelings. They include: (1) cohesive finite element methods and discontinuous Galerkin methods; (2) meshfree methods, partition of unity methods, and the eXtended finite element methods (X-FEM); (3) quasicontinuum method; (4) molecular dynamics; (5) multiscale simulations; (6) Boltzmann method.
Computational Nano-mechanics: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of laboratory per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Li
Also listed as: NSE C237
Computational Nano-mechanics: Read Less [-]

CIV ENG 240 Civil Engineering Materials 3 Units
Terms offered: Fall 2016, Fall 2015, Fall 2014
Microstructures of concrete, wood, and steel. Differences and similarities in response to loading and environmental effects on these materials, with emphasis on strength, elastic properties, creep, shrinkage, thermal stresses, and failure mechanisms.
Civil Engineering Materials: Read More [+]

Rules & Requirements
Prerequisites: An undergraduate course in civil engineering materials

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 3 hours of laboratory per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Monteiro, Ostertag
Civil Engineering Materials: Read Less [-]

CIV ENG 241 Concrete Technology 3 Units
Terms offered: Spring 2015, Spring 2013, Fall 2012
Concrete Technology: Read More [+]

Rules & Requirements
Prerequisites: 165 or equivalent

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Moehle

Reinforced Concrete Structures: Read Less [-]

CIV ENG 245 Behavior of Reinforced Concrete 3 Units
Terms offered: Spring 2015, Spring 2013, Spring 2011
Advanced topics in reinforced concrete construction, including inelastic flexural behavior; applications of plastic analysis to reinforced concrete frames; behavior in shear and torsion; yield-line analysis of slabs; behavior under cyclic and reversed loading; seismic rehabilitation.

Behavior of Reinforced Concrete: Read More [+]

Rules & Requirements
Prerequisites: 123 and 220

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Moehle

Behavior of Reinforced Concrete: Read Less [-]

CIV ENG 246 Prestressed Concrete Structures 3 Units
Behavior and design of statically determinate prestressed concrete structures under bending moment, shear, torsion and axial load effects. Design of continuous prestressed concrete beams, frames, slabs, and shells. Time-dependent effects and deflections of prestressed concrete structures. Applications to the design and construction of bridges and buildings.

Prestressed Concrete Structures: Read More [+]

Rules & Requirements
Prerequisites: 244 or consent of instructor

Operation of Transportation Facilities: Read Less [-]
CIV ENG 252 Systems Analysis in Transportation 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015

CIV ENG 253 Intelligent Transportation Systems 3 Units
Terms offered: Spring 2017, Fall 2015, Fall 2014
The use of advanced surveillance, navigation, communication, and computer technology to monitor, analyze, and improve the performance of transportation systems. Enabling technologies. Application to monitoring, analysis, evaluation, and prediction of transportation system performance and behavior. Intervention strategies. Feasibility studies. Human factors and institutional issues. Case studies. In the laboratory, students carry out a term project under the supervision of an ITS researcher.

CIV ENG 254 Transportation Economics 3 Units
Terms offered: Spring 2010, Spring 2009, Spring 2008

CIV ENG 255 Highway Traffic Operations 3 Units
Terms offered: Spring 2018, Spring 2016, Spring 2015
Operational planning and management of the highway transportation system. The highway system is presented as a set of operating environments with each having its unique analytical framework. Major topics to be covered include policy and institutional issues, selection of strategies and tactics, evaluation of objectives and measures of effectiveness.
CIV ENG 256 Transportation Sustainability 3 Units
This multi-disciplinary course is intended to introduce students to the fundamentals of sustainable transportation, with an emphasis on: 1) current trends, climate and energy science, and the policy context; 2) methodological and analysis techniques; 3) vehicle technology, fuels, and intelligent transportation systems (ITS) solutions (supply side); and 4) land use, public transportation, and demand management.
Transportation Sustainability: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Horvath

CIV ENG 258 Logistics 3 Units
Terms offered: Fall 2013, Fall 2011, Fall 2010
Vehicle routing. Transportation-inventory-production interrelationships, physical distribution networks, many-to-many networks (airlines, postal, etc.), the role of transshipments and terminals in logistic systems for the transportation of goods and passengers, public and private transportation system design. Relevant methodologies.
Logistics: Read More [+]

Prerequisites: Consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Shen

Also listed as: IND ENG C253
Supply Chain and Logistics Management: Read Less [-]

CIV ENG C258 Supply Chain and Logistics Management 3 Units
Supply chain analysis is the study of quantitative models that characterize various economic trade-offs in the supply chain. The field has made significant strides on both theoretical and practical fronts. On the theoretical front, supply chain analysis inspires new research ventures that blend operations research, game theory, and microeconomics. These ventures result in an unprecedented amalgamation of prescriptive, descriptive, and predictive models characteristic of each subfield. On the practical front, supply chain analysis offers solid foundations for strategic positioning, policy setting, and decision making.
Supply Chain and Logistics Management: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Shen

Supply Chain and Logistics Management: Read Less [-]

CIV ENG 259 Public Transportation Systems 3 Units
Analysis of mass transit systems, their operation, and management. Technology of transit vehicles and structures. Public policy and financing.
Public Transportation Systems: Read More [+]

Rules & Requirements
Prerequisites: 251, 252, and 262 (or equivalent course)

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Cassidy, Daganzo, Madanat
Public Transportation Systems: Read Less [-]
CIV ENG 260 Air Transportation 3 Units
Nature of civil aviation; structure of the airline industry; aircraft characteristics and performance; aircraft noise; navigation and air traffic control; airport planning and design; airline operations; aviation system planning.
Air Transportation: Read More [+]
Rules & Requirements
Prerequisites: Graduate standing or consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Hansen, Kanafani
Air Transportation: Read Less [-]

CIV ENG 261 Infrastructure Systems Management 3 Units
Terms offered: Spring 2014, Spring 2013, Spring 2011
Integrated treatment of quantitative and analytical methods for the management of infrastructure facilities over their life. The focus of the course is on statistical modeling and numerical optimization methods and their application to managing systems of civil infrastructure, with an emphasis on transportation facilities.
Infrastructure Systems Management: Read More [+]
Rules & Requirements
Prerequisites: 252 or equivalent, 262 or equivalent
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Madanat
Infrastructure Systems Management: Read Less [-]

CIV ENG 262 Analysis of Transportation Data 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
Probabilistic models in transportation. The use of field data. Data gathering techniques, sources of errors, considerations of sample size. Experiment design for demand forecasting and transportation operations analysis. Analysis techniques.
Analysis of Transportation Data: Read More [+]
Rules & Requirements
Prerequisites: College calculus or consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Daganzo, Hansen, Madanat
Analysis of Transportation Data: Read Less [-]

CIV ENG 263 Operations of Transportation Terminals 3 Units
Terms offered: Fall 2008, Spring 2007, Spring 2006
Characteristics of terminals on a mode by mode basis (sea ports, railyards, airports, parking lots, etc.). Methodologies used to study terminal operations and the management of congestion. (Chronographs, input-output diagrams, pricing, simulation). Studies illustrating the use of the methodologies for different modes.
Operations of Transportation Terminals: Read More [+]
Rules & Requirements
Prerequisites: Graduate standing or consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of session per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Daganzo
Operations of Transportation Terminals: Read Less [-]
CIV ENG 263N Scalable Spatial Analytics 3 Units
Terms offered: Fall 2016, Fall 2015, Fall 2014
Introduction to modern methods of data analysis, spatial data handling and visualization technologies for engineers and data scientists. Theoretical coverage includes a selection of methods from spatial statistics, exploratory data analysis, spatial data mining, discriminative and generative approaches of machine learning. Projects and assignment tasks are targeted at real-world scalable implementation of systems and services based on data analytics in environmental remote sensing, transportation, energy, location-based services and the domain of “smart cities” in general.

Rules & Requirements
Prerequisites: Civil and Environmental Engineering 290I or consent of instructor.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week.

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Pozdnukhov

Scalable Spatial Analytics: Read More [+]
Rules & Requirements
Prerequisites: 262 or City and Regional Planning 204 or equivalent

CIV ENG 264 Behavioral Modeling for Engineering, Planning, and Policy Analysis 3 Units
Many aspects of engineering, planning, and policy involve a human element, be it consumers, businesses, governments, or other organizations. Effective design and management requires understanding this human response. This course focuses on behavioral theories and the use of quantitative methods to analyze human response. A mix of theory and practical tools are covered, with applications drawn from infrastructure investment and use, urban growth and design, health, and sustainability.

Rules & Requirements
Prerequisites: Civil and Environmental Engineering/Graduate

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week.

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Walker

Behavioral Modeling for Engineering, Planning, and Policy Analysis: Read Less [-]

CIV ENG C265 Traffic Safety and Injury Control 3 Units
This course applies principles of engineering, behavioral science, and vision science to preventing traffic collisions and subsequent injury. A systematic approach to traffic safety will be presented in the course, and will include (1) human behavior, vehicle design, and roadway design as interacting approaches to preventing traffic crashes and (2) vehicle and roadway designs as approaches to preventing injury once a collision has occurred. Implications of intelligent transportation system concepts for traffic safety will be discussed throughout the course.

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week.

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Ragland

Also listed as: PB HLTH C285
Traffic Safety and Injury Control: Read Less [-]
CIV ENG 268A Lean Construction Concepts and Methods 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
Inspired by the "lean" resolution in manufacturing, production management concepts and methods are woven into a lean project delivery system. Key concepts include flow, value, variability, and waste. Key methods include prosecution system design, target costing, value stream mapping, and work flow control. Student teams apply concepts and methods in field studies of real project management processes and construction operations. The course includes a tour of the NUMMI Auto Plant in Fremont.
Lean Construction Concepts and Methods: Read More [+]  
Rules & Requirements  
Prerequisites: Graduate standing in Civil and Environmental Engineering

Hours & Format  
Fall and/or spring: 15 weeks - 3 hours of lecture per week  
Additional Details  
Subject/Course Level: Civil and Environmental Engineering/Graduate  
Grading: Letter grade.  
Instructor: Ballard  
Formerly known as: 290M
Lean Construction Concepts and Methods: Read Less [-]

CIV ENG 268B Lean Construction and Supply Chain Management 3 Units  
Principles and practices of "lean" production are applied to project delivery in the AEC industry. Case studies illustrate the concepts. Project delivery is viewed holistically with a focus on work structuring and supply chain management. Topics include systems dynamics, uncertainty, and variation; materials management; logistics; e-commerce; building information modeling (BIM); and integrated product and process design. Students use process simulation to assess performance of different system configurations and develop a case study applying concepts on a real project.  
Lean Construction and Supply Chain Management: Read More [+] 
Hours & Format  
Fall and/or spring: 15 weeks - 3 hours of lecture per week  
Additional Details  
Subject/Course Level: Civil and Environmental Engineering/Graduate  
Grading: Letter grade.  
Instructor: Tommelein  
Formerly known as: 290N
Lean Construction and Supply Chain Management: Read Less [-]

CIV ENG 268D Law for Engineers 3 Units  
Engineering involves many parties with diverse interests. Legal principles form the framework for their interaction. Contracts for engineering services establish both risk allocation and reciprocal liabilities. Issues of contract formation, performance, breach, and remedy are covered in detail. Standard of care and professional negligence are emphasized during the discussion of tort law. Other topics include regulation, legal relationships, litigation, and alternative dispute resolution.
Law for Engineers: Read More [+]  
Hours & Format  
Fall and/or spring: 15 weeks - 3 hours of lecture per week  
Additional Details  
Subject/Course Level: Civil and Environmental Engineering/Graduate  
Grading: Letter grade.  
Instructor: Ballard  
Formerly known as: 290L
Law for Engineers: Read Less [-]

CIV ENG 268E Civil Systems and the Environment 3 Units  
Terms offered: Fall 2017, Fall 2016, Fall 2015  
Methods and tools for economic and environmental analysis of civil engineering systems. Focus on construction, transportation, and operation, and maintenance of the built infrastructure. Life-cycle planning, design, costing, financing, and environmental assessment. Industrial ecology, design for environment, pollution prevention, external costs. Models and software tools for life-cycle economic and environmental inventory, impact, and improvement analysis of civil engineering systems.
Civil Systems and the Environment: Read More [+]  
Rules & Requirements  
Prerequisites: 166 or 167 or equivalent

Hours & Format  
Fall and/or spring: 15 weeks - 3 hours of lecture per week  
Additional Details  
Subject/Course Level: Civil and Environmental Engineering/Graduate  
Grading: Letter grade.  
Instructor: Horvath
Civil Systems and the Environment: Read Less [-]
CIV ENG 268H Advanced Project Planning and Control 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
Cost and time estimating and controlling techniques for projects. Evaluation of labor, material, equipment, and subcontract resources, scheduling techniques, earned value concepts. Measuring project percent complete. Contractual risk allocation. Project investment analysis techniques.
Advanced Project Planning and Control: Read More [+]

Rules & Requirements
Prerequisites: 167

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Ibbs

Advanced Project Planning and Control: Read Less [-]

CIV ENG 268I Business Fundamentals for Engineers 3 Units
Terms offered: Spring 2017, Spring 2016, Spring 2015
This course will provide a broad survey of management practices critical to starting and managing a business in the engineering and construction industries. Topics that are covered include the entrepreneurial process; organizing and staffing; establishing and applying production control systems; means of protecting products and services from competitive threat; and financial management.
Business Fundamentals for Engineers: Read More [+]

Rules & Requirements
Prerequisites: 167 or equivalent

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Ibbs

Business Fundamentals for Engineers: Read Less [-]

CIV ENG 268K Human and Organizational Factors: Quality and Reliability of Engineered Systems 3 Units
Terms offered: Spring 2011, Spring 2010, Fall 2009
This course addresses human and organizational factors in development of desirable quality and reliability in engineered systems during their life-cycles (concept development through decommissioning). Applications tested and verified proactive, reactive, and interactive approaches are developed and illustrated.
Human and Organizational Factors: Quality and Reliability of Engineered Systems: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Bea
Formerly known as: 290A

Human and Organizational Factors: Quality and Reliability of Engineered Systems: Read Less [-]
CIV ENG 268S Buildings and Sustainability 3 Units
Terms offered: Spring 2018
Overview of what makes buildings and their systems “green” and “sustainable,” and analysis throughout their life cycle (design, materials, construction, operation, maintenance, renovation, end of life) and in interaction with infrastructure systems (energy, transportation, water, waste management), the economy, natural environment, society. Innovative approaches, expectations for future developments. Cost-benefit analysis. Life-cycle management. Net-zero buildings. Case studies.
Buildings and Sustainability: Read More [+]

Objectives Outcomes
Course Objectives:
1. Provide overview of the importance of buildings to resource management, particularly focused on energy, transportation systems, water, waste, and land use
2. Introduce the major design considerations, practices, and outcomes associated with green buildings
3. Develop students’ ability to think critically about the role of buildings in society.
4. Critically evaluate tradeoffs in building systems design subject to time, cost, material, social, and environmental constraints, and ethical considerations.
5. Consider the future of the green building industry in the context of real-world developments and practice, equity, and justice.
6. Evaluate the interplay between buildings and policy, including use of local case studies.

Rules & Requirements
Prerequisites: Graduate or senior undergraduate standing with consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Horvath
Buildings and Sustainability: Read Less [-]

CIV ENG 270 Advanced Geomechanics 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
Advanced treatment of topics in soil mechanics, including state of stress, consolidation and settlement analysis, shear strength of cohesionless and cohesive soils, and slope stability analysis.
Advanced Geomechanics: Read More [+]

Rules & Requirements
Prerequisites: 175 or equivalent

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Bray, Pestana, Seed
Formerly known as: 270A

Advanced Geomechanics: Read Less [-]

CIV ENG 271 Sensors and Signal Interpretation 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
An introduction to the fundamentals of sensor usage and signal processing, and their application to civil systems. In particular, the course focuses on how basic classes of sensors work, and how to go about choosing the best of the new MEMS-based devices for an application. The interpretation of the data focuses on analysis of transient signals, an area typically ignored in traditional signal processing courses. Goals include development of a critical understanding of the assumptions used in common sensing and analysis methods and their implications, strengths, and limitations.
Sensors and Signal Interpretation: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Glaser

Sensors and Signal Interpretation: Read Less [-]
CIV ENG 272 Numerical Modelling in Geomechanics 3 Units
Constitutive laws for geotechnical materials including inelastic hyperbolic and elasto-plastic Cam-clay; soil behavior and critical-state soil mechanics; application of the finite element method to static analysis of earth structures; the Discontinuous Deformation Analysis method. Numerical Modelling in Geomechanics: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Bray, Pestana
Numerical Modelling in Geomechanics: Read Less [-]

CIV ENG 273 Advanced GeoEngineering Testing and Design 3 Units
Field and laboratory testing of soils to support analysis and design of earth structures. In situ field testing, including SPT, CPT, and vane shear, undisturbed sampling of soil, and laboratory testing of soil, including advanced equipment, instrumentation, data acquisition, and measurement techniques. Consolidation and static and cyclic triaxial and simple shear testing under stress- and strain-control with pore pressure measurements. Preparation of an engineering report. Advanced GeoEngineering Testing and Design: Read More [+]

Rules & Requirements
Prerequisites: 270 or consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 1.5 hours of lecture per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Bray, Pestana, Seed
Formerly known as: 270L
Advanced GeoEngineering Testing and Design: Read Less [-]

CIV ENG 275 Geotechnical Earthquake Engineering 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
Seismicity, influence of soil conditions on site response, seismic site response analysis, evaluation and modelling of dynamic soil properties, analysis of seismic soil-structure interaction, evaluation and mitigation of soil liquefaction and its consequences, seismic code provisions and practice, seismic earth pressures, seismic slope stability and deformation analysis, seismic safety of dams and embankments, seismic performance of pile foundations, and additional current topics. Geotechnical Earthquake Engineering: Read More [+]

Rules & Requirements
Prerequisites: 175 or equivalent, or consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Bray, Seed
Geotechnical Earthquake Engineering: Read Less [-]

CIV ENG C276 Seismic Hazard Analysis and Design Ground Motions 3 Units
Terms offered: Spring 2018, Fall 2017, Spring 2017, Spring 2016
Deterministic and probabilistic approaches for seismic hazard analysis. Separation of uncertainty into aleatory variability and epistemic uncertainty. Discussion of seismic source and ground motion characterization and hazard computation. Development of time histories for dynamic analyses of structures and seismic risk computation, including selection of ground motion parameters for estimating structural response, development of fragility curves, and methods for risk calculations. Seismic Hazard Analysis and Design Ground Motions: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Abrahamson
Also listed as: EPS C276
Seismic Hazard Analysis and Design Ground Motions: Read Less [-]
CIV ENG 277 Advanced Foundation Engineering 3 Units
Advanced treatment of topics in foundation engineering, including earth pressure theories, design of earth retaining structures, bearing capacity, ground improvement for foundation support, analysis and design of shallow and deep foundations.
Advanced Foundation Engineering: Read More [+]

Rules & Requirements
Prerequisites: 270 or consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Bray, Pestana, Seed
Formerly known as: 270B
Advanced Foundation Engineering: Read Less [-]

CIV ENG 281 Engineering Geology 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
Influence of geologic origin and history on the engineering characteristics of soils and rocks. Application of geology in exploration, design, and construction of engineering works.
Engineering Geology: Read More [+]

Rules & Requirements
Prerequisites: A course in physical geology
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 3 hours of laboratory per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Sitar
Engineering Geology: Read Less [-]

CIV ENG 285C Seismic Methods in Applied Geophysics 3 Units
Terms offered: Spring 2011, Spring 2006, Spring 2002
This course gives an overview of seismic methods used to image the subsurface. Acquisition, processing, and interpretation of seismic data are discussed, with application to petroleum production, environmental site characterization, earthquake engineering, and groundwater.
Seismic Methods in Applied Geophysics: Read More [+]

Rules & Requirements
Prerequisites: C178 or equivalent (introductory course in applied geophysics); Engineering 7 or 77 or equivalent (introductory course in computer programming)
Credit Restrictions: Students will receive no credit for 285C after taking Mineral Engineering 236 before Fall 2001.
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Instructor: Rector
Formerly known as: Mineral Engineering 236
Seismic Methods in Applied Geophysics: Read Less [-]

CIV ENG 286 Digital Data Processing 3 Units
Terms offered: Spring 2017, Spring 2013, Fall 2012
Digital Data Processing: Read More [+]

Rules & Requirements
Prerequisites: Consent of instructor
Credit Restrictions: Students will receive no credit for 286 after taking Mineral Engineering 240 taken before Fall 2001.
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Rector
Formerly known as: Mineral Engineering 240
Digital Data Processing: Read Less [-]
CIV ENG C289 Embedded System Design: Modeling, Analysis, and Synthesis 4 Units
Terms offered: Spring 2016, Spring 2015, Fall 2013
Principles of embedded system design. Focus on design methodologies and foundations. Platform-based design and communication-based design and their relationship with design time, re-use, and performance. Models of computation and their use in design capture, manipulation, verification, and synthesis. Mapping into architecture and systems platforms. Performance estimation. Scheduling and real-time requirements. Synchronous languages and time-triggered protocols to simplify the design process.
Embedded System Design: Modeling, Analysis, and Synthesis: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture, 1 hour of discussion, and 2 hours of laboratory per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Sangiovanni-Vincentelli
Formerly known as: Electrical Engineering C249/Civil and Environmental Engineering C289
Also listed as: EL ENG C249B

CIV ENG 290F Advanced Topics in Seismology 3 Units
Terms offered: Spring 2018, Spring 2016, Spring 2014
Active areas of research in applied seismology. Subjects include: anisotropic and viscoelastic wave propagation, borehole seismology, crosswell seismology, including crosswell seismic tomography, vertical seismic profiling, reservoir monitoring including passive seismic methods.
Advanced Topics in Seismology: Read More [+]

Rules & Requirements
Prerequisites: Introductory course in seismology; 286 or Mineral Engineering 240
Repeat rules: Course may be repeated for credit with instructor consent. Course may be repeated for credit when topic changes.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Rector
Formerly known as: Mineral Engineering 290C

CIV ENG 290I Civil Systems: Control and Information Management 3 Units
Mathematical methods and information technologies for controlling CEE systems. Emphasizes designing component organizations that interact with the world in real-time to control a large system. Methods applied to transportation operations, supply chains, and structures. Management of design complexity by hierarchical specification, systematic use of simulation and verification tools, semantics, polymorphism, information management services, and compilation from high-level design languages.
Civil Systems: Control and Information Management: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Sengupta
Civil Systems: Control and Information Management: Read Less [-]
CIV ENG 290J Advanced Topics in Geotechnical Engineering 3 Units
Advanced treatment of developing areas of geomechanics and geotechnical earthquake engineering, including the development of generalized nonlinear soil constitutive models, new developments in soil dynamics and geotechnical earthquake engineering, soil improvement, geosynthetics and earth structures, and case studies of geotechnical problems.

Rules & Requirements
Prerequisites: Advanced graduate standing in Geoengineering

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of seminar per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Bray, Pestana, Seed

Advanced Topics in Geotechnical Engineering: Read Less [-]

CIV ENG 290T Advanced Topics in Transportation Theory 1 Unit
Terms offered: Fall 2008, Spring 2008, Fall 2007
Selected topics in the mathematical analysis of transportation systems. Topics will vary from year to year.

Rules & Requirements
Prerequisites: Consent of instructor
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.
Instructors: Cassidy, Daganzo

Advanced Topics in Transportation Theory: Read Less [-]

CIV ENG C290U Transportation and Land Use Planning 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
Examination of the interactions between transportation and land use systems; historical perspectives on transportation; characteristics of travel and demand estimation; evaluation of system performance; location theory; models of transportation and urban structure; empirical evidence of transportation-land use impacts; case study examinations.

Rules & Requirements
Prerequisites: 113A or equivalent

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructors: Chatman, Cervero
Also listed as: CY PLAN C213

Transportation and Land Use Planning: Read Less [-]

CIV ENG 291G Advanced Estimation, Control, and Optimization of Partial Differential Equations 3 Units
Terms offered: Prior to 2007
This course will cover advanced methods in estimation, control, and optimization of distributed parameter systems (partial differential equations in particular). The course builds on 291 and covers discrete methods relying on finite differencing such as quadratic programming for optimal control and variational data assimilation, (ensemble, extended) Kalman filtering. The course covers distributed transfer function analysis and frequency responses of PDEs, and characteristics-based stability analysis.

Rules & Requirements
Prerequisites: Civil and Environmental Engineering C291F/Electrical Engineering C291/Mechanical Engineering C236 or equivalent, or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.
Instructor: Bayen

Advanced Estimation, Control, and Optimization of Partial Differential Equations: Read Less [-]
CIV ENG C291F Control and Optimization of Distributed Parameters Systems 3 Units
Terms offered: Fall 2017, Spring 2016, Spring 2015, Spring 2014

Control and Optimization of Distributed Parameters Systems: Read More [+]

Rules & Requirements
Prerequisites: Engineering 77, Mathematics 54 (or equivalent), or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.

Also listed as: EL ENG C291/MEC ENG C236

Control and Optimization of Distributed Parameters Systems: Read Less [-]

CIV ENG 292A Technologies for Sustainable Societies 1 Unit
Terms offered: Fall 2017, Fall 2016, Fall 2015
Exploration of selected important technologies that serve major societal needs, such as shelter, water, food, energy, and transportation, and waste management. How specific technologies or technological systems do or do not contribute to a move toward sustainability. Specific topics vary from year to year according to student and faculty interests.

Technologies for Sustainable Societies: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1.5 hours of seminar per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.

Instructors: Horvath, Nazaroff

Technologies for Sustainable Societies: Read Less [-]

CIV ENG 295 Energy Systems and Control 3 Units
Introduction to energy system management and the underlying control system tools. Applications of interest include batteries, electric vehicles, renewable energy, power systems, and smart buildings/homes.
Technical tools include system modeling, state-space representations, stability, parameter identification, state observers, feedback control, and optimization

Energy Systems and Control: Read More [+]

Objectives Outcomes
Course Objectives: This course provides an introduction to emerging smart energy systems and the associated fundamental concepts in control systems theory

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Letter grade.

Instructor: Moura

Energy Systems and Control: Read Less [-]

CIV ENG 297 Field Studies in Civil and Environmental Engineering 1 - 12 Units
Terms offered: Summer 2018 10 Week Session, Spring 2018, Fall 2017
Supervised experience in off-campus companies relevant to specific aspects and applications of civil and environmental engineering. Written report required at the end of the semester. Course does not satisfy unit or residence requirements for a master's or doctoral degree.

Field Studies in Civil and Environmental Engineering: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1-12 hours of fieldwork per week

Summer:
6 weeks - 2.5-30 hours of fieldwork per week
8 weeks - 1.5-22.5 hours of fieldwork per week
10 weeks - 1.5-18 hours of fieldwork per week

Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.

Instructors: Horvath, Nazaroff

Field Studies in Civil and Environmental Engineering: Read Less [-]
CIV ENG 298 Group Studies, Seminars, or Group Research 1 - 6 Units
Terms offered: Spring 2018, Fall 2017, Spring 2017
Advanced studies in various subjects through special seminars on annually selected topics, informal group studies of special problems, group participation in comprehensive design problems, or group research on complete problems for analysis and experimentation.
Group Studies, Seminars, or Group Research: Read More [+]
Rules & Requirements
Prerequisites: Graduate standing
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Fall and/or spring: 15 weeks - 0 hours of independent study per week
Additional Details
Subject/Course Level: Civil and Environmental Engineering/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.
Group Studies, Seminars, or Group Research: Read Less [-]

CIV ENG 299 Individual Research 1 - 12 Units
Terms offered: Summer 2018 10 Week Session, Spring 2018, Fall 2017
Research or investigation in selected advanced subjects.
Individual Research: Read More [+]
