Computer Science

The Department of Electrical Engineering and Computer Sciences (EECS) offers two graduate programs in Computer Science: the Master of Science (MS), and the Doctor of Philosophy (PhD).

Master of Science (MS)

The Master of Science (MS) emphasizes research preparation and experience and, for most students, is a chance to lay the groundwork for pursuing a PhD.

Doctor of Philosophy (PhD)

The Berkeley PhD in EECS combines coursework and original research with some of the finest EECS faculty in the US preparing for careers in academia or industry. Our alumni (http://www.eecs.berkeley.edu/alumni/distinguished.shtml) have gone on to hold amazing positions around the world.

Admission to the University

Minimum Requirements for Admission

The following minimum requirements apply to all graduate programs and will be verified by the Graduate Division:

1. A bachelor’s degree or recognized equivalent from an accredited institution;
2. A grade point average of B or better (3.0);
3. If the applicant comes from a country or political entity (e.g., Quebec) where English is not the official language, adequate proficiency in English to do graduate work, as evidenced by a TOEFL score of at least 90 on the iBT test, 570 on the paper-and-pencil test, or an IELTS Band score of at least 7 on a 9-point scale (note that individual programs may set higher levels for any of these); and
4. Sufficient undergraduate training to do graduate work in the given field.

Applicants Who Already Hold a Graduate Degree

The Graduate Council views academic degrees not as vocational training certificates, but as evidence of broad training in research methods, independent study, and articulation of learning. Therefore, applicants who already have academic graduate degrees should be able to pursue new subject matter at an advanced level without need to enroll in a related or similar graduate program.

Programs may consider students for an additional academic master’s or professional master’s degree only if the additional degree is in a distinctly different field.

Applicants admitted to a doctoral program that requires a master’s degree to be earned at Berkeley as a prerequisite (even though the applicant already has a master’s degree from another institution in the same or a closely allied field of study) will be permitted to undertake the second master’s degree, despite the overlap in field.

The Graduate Division will admit students for a second doctoral degree only if they meet the following guidelines:

1. Applicants with doctoral degrees may be admitted for an additional doctoral degree only if that degree program is in a general area of knowledge distinctly different from the field in which they earned their original degree. For example, a physics PhD could be admitted to a doctoral degree program in music or history; however, a student with a doctoral degree in mathematics would not be permitted to add a PhD in statistics.
2. Applicants who hold the PhD degree may be admitted to a professional doctorate or professional master’s degree program if there is no duplication of training involved.

Applicants may apply only to one single degree program or one concurrent degree program per admission cycle.

Required Documents for Applications

1. Transcripts: Applicants may upload unofficial transcripts with your application for the departmental initial review. If the applicant is admitted, then official transcripts of all college-level work will be required. Official transcripts must be in sealed envelopes as issued by the school(s) attended. If you have attended Berkeley, upload your unofficial transcript with your application for the departmental initial review. If you are admitted, an official transcript with evidence of degree conferment will not be required.
2. Letters of recommendation: Applicants may request online letters of recommendation through the online application system. Hard copies of recommendation letters must be sent directly to the program, not the Graduate Division.
3. Evidence of English language proficiency: All applicants from countries or political entities in which the official language is not English are required to submit official evidence of English language proficiency. This applies to applicants from Bangladesh, Burma, Nepal, India, Pakistan, Latin America, the Middle East, the People’s Republic of China, Taiwan, Japan, Korea, Southeast Asia, most European countries, and Quebec (Canada). However, applicants who, at the time of application, have already completed at least one year of full-time academic course work with grades of B or better at a US university may submit an official transcript from the US university to fulfill this requirement. The following courses will not fulfill this requirement:
   • courses of a non-academic nature.
   • courses that will be completed after the application is submitted, and
   • courses conducted in a language other than English.

If applicants have previously been denied admission to Berkeley on the basis of their English language proficiency, they must submit new test scores that meet the current minimum from one of the standardized tests. Official TOEFL score reports must be sent directly from Educational Test Services (ETS). The institution code for Berkeley is 4833. Official IELTS score reports must be mailed directly to our office from British Council. TOEFL and IELTS score reports are only valid for two years.

Where to Apply

Visit the Berkeley Graduate Division application page (http://grad.berkeley.edu/admissions/apply).

Admission to the Program

The following items are required for admission to the Berkeley EECS MS/PhD program in addition to the University’s general graduate admissions requirements:
1. **GRE Scores**: All three sections of the GRE are required. Send your scores electronically to Institution Code 4833. (Scores must be from the last five years.)

2. **Statement of Purpose**: Why are you applying for this program? What will you do during this degree program? What do you want to do after and how will this help you?

3. **Personal History Statement**: What from your past made you decide to go into this field? And how will your personal history help you succeed in this program and your future goals?

4. **GPA**: If you attended a university outside of the USA, please leave the GPA section blank.

5. **Resume**: Please also include a full resume/CV listing your experience and education.

Complete the online UC Berkeley graduate application:

1. Start your application through this link (http://www.grad.berkeley.edu), and fill in each relevant page.

2. Upload the materials above, and send the recommender links several weeks prior to the application deadline, to give your recommenders time to submit their letters.

**Normative Time Requirements**

Normative time in the EECS department is between 5.5-6 years for the doctoral program.

**Time to Advancement**

**Curriculum**

The faculty of the College of Engineering recommends a minimum number of courses taken while in graduate standing. The total minimum is 24 units of coursework, taken for a letter grade and not including 298, 299, 301, and 602. Students entering prior to fall 2009 have the option of completing 32 units of coursework with a reduced teaching requirement.

- 12 units from one major field within EECS, with a 3.5 grade point average
- 6 units from one minor field within EECS, with a 3.0 grade point average
- 6 units from one minor field outside EECS, with a 3.0 grade point average
- COMPSCI 375 Teaching Techniques for Computer Science 2

**Breadth Courses**

The breadth courses ensure that students have an exposure to areas outside of their concentration. It is expected that students achieve high academic standards in these courses.

CS students must complete courses from three of the following areas, passing each with at least a B+. One course must be selected from the Theory, AI, or Graphics/HCI group; and one course must be selected from the Programming, Systems, or Architecture/VLSI group.

1 COMPSCI 260B, COMPSCI 263, and EL ENG 219C cannot be used to fulfill this constraint, though they can be used to complete one of the three courses.

**Qualifying Examination (QE)**

The QE is an important checkpoint meant to show that a student is on a promising research track toward the PhD degree. It is a University examination, administered by the Graduate Council, with the specific purpose of demonstrating that "the student is clearly an expert in those areas of the discipline that have been specified for the examination, and that he or she can, in all likelihood, design and produce an acceptable dissertation." Despite such rigid criteria, faculty examiners recognize that the level of expertise expected is that appropriate for a third year
graduate student who may be only in the early stages of a research project.

The EECS Department offers the qualifying exam in two formats: A or B. Students may choose the exam type of their choice after consultation with their adviser.

**Format A**

1. Students prepare a write-up and presentation summarizing a specific research area, preferably the one in which they intend to do their dissertation work. Their summary surveys that area and describes open and interesting research problems.
2. They describe why they chose these problems and indicate what direction their research may take in the future.
3. They prepare to display expertise on both the topic presented and on any related material that the committee thinks is relevant.
4. The student should talk (at least briefly) about any research progress to date (e.g., MS project, PhD research, or class project). Some evidence of the ability to do research is expected.
5. The committee shall evaluate students on the basis of their comprehension of the fundamental facts and principles that apply within their research area and the student’s ability to think incisively and critically about the theoretical and practical aspects of this field.
6. Students must demonstrate command of the content and the ability to design and produce an acceptable dissertation.

**Format B**

This option includes the presentation and defense of a thesis proposal in addition to the requirements of format A. It will include a summary of research to date and plans for future work (or at least the next stage thereof). The committee shall not only evaluate the student's thesis proposal and his/her progress to date, but shall also evaluate according to format A. As in format A, the student should prepare a single document and presentation, but in this case additional emphasis must be placed on research completed to date and plans for the remainder of the dissertation research.

**Thesis Proposal Defense**

Students not presenting a satisfactory thesis proposal defense, either because they took format A for the QE or because the material presented in an format B exam was not deemed a satisfactory proposal defense (although it may have sufficed to pass the QE), must write up and present a thesis proposal, which should include a summary of the research to date and plans for the remainder of the dissertation research. They should be prepared to discuss background and related areas, but the focus of the proposal should be on the progress made so far, and detailed plans for completing the thesis. The standard for continuing on with PhD research is that the proposal has sufficient merit to lead to a satisfactory dissertation. Another purpose of this presentation is for faculty to provide feedback on the quality of work to date. For this step, the committee should consist of at least three members from EECS familiar with the research area, preferably including those on the dissertation committee.

**Normative Time in Candidacy**

**Advancement to Candidacy**

Students must file the advancement form in the Graduate Office no later than the end of the semester following the one in which the qualifying exam was passed. In approving this application, Graduate Division approves the dissertation committee and will send a certificate of candidacy.

Students in the EECS department are required to be in advanced to candidacy status at least two semesters before they are eligible to graduate. Once a student is advanced to candidacy, candidacy is valid for five years. For the first three years, non-resident tuition may be waived, if applicable.

**Dissertation Talk**

As part of the requirements for the doctoral degree, students must give a public talk on the research covered by their dissertation. The dissertation talk should be given a few months before the signing of the final submission of the dissertation. It must be given before the final submission of the dissertation. The talk should cover all the major components of the dissertation work in a substantial manner; in particular, the dissertation talk should not omit topics that will appear in the dissertation but are incomplete at the time of the talk.

The dissertation talk is to be attended by the whole dissertation committee, or, if this is not possible, by at least a majority of the members. Attendance at this talk is part of the committee's responsibility. It is, however, the responsibility of the student to schedule a time for the talk that is convenient for members of the committee. The EECS department requires that the talk be given during either the fall or spring semester.

**Required Professional Development**

**Graduate Student Instructor Teaching Requirement**

The department requires all PhD candidates to serve as graduate student instructors (GSIs) within the EECS department. The GSI teaching requirement not only helps to develop a student's communication skills, but it also makes a great contribution to the department's academic community. Students must fulfill this requirement by working as a GSI (excluding EL ENG 375 or COMPSCI 375) for a total of 30 hours minimum prior to graduation. At least 20 of those hours must be for an EE or CS undergraduate course.

**Unit requirements**

A minimum of 24 units is required.

**Curriculum**

All courses must be taken for a letter grade, except courses numbered 299s, which are only offered for S/U credit.

Students must maintain a minimum cumulative GPA of 3.0. No credit will be given for courses in which the student earns a grade of D+ or below.

Transfer credit may be awarded for a maximum of four semester or six quarter units of graduate coursework from another institution.

**Plan I**

<table>

Upper division or graduate courses to reach the minimum of 24 units...
Plan II
10 units of courses, selected from the 200-series (excluding 298 and 299) in EECS
EL ENG 299 Individual Research 3-6
or COMPSCI 299 Individual Research
Upper division or graduate courses to reach the minimum of 24 units

Advancement to Candidacy
For both Plan I and Plan II MS students, students need to complete the departmental Advance to Candidacy form, have their research adviser sign it, and submit the form to the department. Once a student is advanced to candidacy, candidacy is valid for three years.

Capstone/Thesis (Plan I)
Students planning to use Plan I for their MS Degree will need to follow the Graduate Division's "Thesis Filing Guidelines." They will also need to complete the Graduate Division Advance to Candidacy form and submit this to the department no later than the end of the second week of classes of their final semester.

Capstone/Master's Project (Plan II)
Students planning to use Plan II for their MS Degree will need to produce an MS Plan II Title/Signature Page. There is no special formatting required for the body of the Plan II MS report unlike the Plan I MS thesis which must follow strict Graduate Division guidelines.

EECS 206A Introduction to Robotics 4 Units
Terms offered: Fall 2018, Fall 2017
An introduction to the kinematics, dynamics, and control of robot manipulators, robotic vision, and sensing. The course will cover forward and inverse kinematics of serial chain manipulators, the manipulator Jacobian, force relations, dynamics and control-position, and force control. Proximity, tactile, and force sensing. Network modeling, stability, and fidelity in teleoperation and medical applications of robotics.
Introduction to Robotics: Read More [+]

Rules & Requirements
Prerequisites: EE 120 or equivalent, or consent of instructor
Credit Restrictions: Students will receive no credit for EECS 206A after taking EE C125/Bioengineering C125, EE C106A, or EECS C106A.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture, 1 hour of discussion, and 3 hours of laboratory per week

Additional Details
Subject/Course Level: Electrical Engin and Computer Sci/Graduate
Grading: Letter grade.
Instructor: Bajcsy

Introduction to Robotics: Read Less [-]
EECS 206B Robotic Manipulation and Interaction 4 Units
Terms offered: Spring 2018
This course is a sequel to EECS C106A/206A, which covers kinematics, dynamics and control of a single robot. This course will cover dynamics and control of groups of robotic manipulators coordinating with each other and interacting with the environment. Concepts will include an introduction to grasping and the constrained manipulation, contacts and force control for interaction with the environment. We will also cover active perception guided manipulation, as well as the manipulation of non-rigid objects. Throughout, we will emphasize design and human-robot interactions, and applications to applications in manufacturing, service robotics, tele-surgery, and locomotion.

Rules & Requirements
Prerequisites: EECS C106A/Bioengineering C106A, EECS 206A or consent of the instructor
Credit Restrictions: Students will receive no credit for EECS 206B after taking EE C106B/Bioengineering C125B, EECS C106B/BioEngineering C106B, or EE 206B.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture, 1 hour of discussion, and 3 hours of laboratory per week

Additional Details
Subject/Course Level: Electrical Engin and Computer Sci/Graduate
Grading: Letter grade.
Instructors: Bajcsy, Sastry

EECS 219C Formal Methods: Specification, Verification, and Synthesis 3 Units
Terms offered: Spring 2018
Introduction to the theory and practice of formal methods for the design and analysis of systems, with a focus on algorithmic techniques. Covers selected topics in computational logic and automata theory including modeling and specification formalisms, temporal logics, satisfiability solving, model checking, synthesis, learning, and theorem proving. Applications to software and hardware design, cyber-physical systems, robotics, computer security, and other areas will be explored as time permits.

Rules & Requirements
Prerequisites: Graduate standing or Consent of instructor; Computer Science 170 or equivalent is recommended

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Electrical Engin and Computer Sci/Graduate
Grading: Letter grade.
Instructor: Seshia

Formally known as: Electrical Engineering 219C

EECS 227AT Optimization Models in Engineering 4 Units
Terms offered: Fall 2018, Spring 2018, Fall 2017
This course offers an introduction to optimization models and their applications, ranging from machine learning and statistics to decision-making and control, with emphasis on numerically tractable problems, such as linear or constrained least-squares optimization.

Rules & Requirements
Prerequisites: Mathematics 54 or equivalent or consent of instructor
Credit Restrictions: Students will receive no credit for EECS 227AT after taking EECS 127 or Electrical Engineering 127/227AT.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Electrical Engin and Computer Sci/Graduate
Grading: Letter grade.
Instructor: El Ghaoui

Formally known as: Electrical Engineering 227AT
EECS 251A Introduction to Digital Design and Integrated Circuits 3 Units
Terms offered: Fall 2018, Spring 2018, Fall 2017
An introduction to digital circuit and system design. The material provides a top-down view of the principles, components, and methodologies for large scale digital system design. The underlying CMOS devices and manufacturing technologies are introduced, but quickly abstracted to higher levels to focus the class on design of larger digital modules for both FPGAs (field programmable gate arrays) and ASICs (application specific integrated circuits). The class includes extensive use of industrial grade design automation and verification tools for assignments, labs, and projects.

Introduction to Digital Design and Integrated Circuits: Read More [+]

Objectives Outcomes

Course Objectives: The Verilog hardware description language is introduced and used. Basic digital system design concepts, Boolean operations/combinational logic, sequential elements and finite-state-machines, are described. Design of larger building blocks such as arithmetic units, interconnection networks, input/output units, as well as memory design (SRAM, Caches, FIFOs) and integration are also covered. Parallelism, pipelining and other micro-architectural optimizations are introduced. A number of physical design issues visible at the architecture level are covered as well, such as interconnects, power, and reliability.

Student Learning Outcomes: Although the syllabus is the same as EECS151, the assignments and exams for EECS251A will have harder problems that test deeper understanding expected from a graduate level course.

Rules & Requirements

Prerequisites: Electrical Engineering 16A & 16B; Computer Science 61C; and recommended: Electrical Engineering 105. Students must enroll concurrently in at least one the laboratory flavors Electrical Engineering and Computer Science 251LA or Electrical Engineering and Computer Science 251LB. Students wishing to take a second laboratory flavor next term can sign-up only for that laboratory section and receive a letter grade. The pre-requisite for “Lab-only” enrollment that term will be Electrical Engineering an

EECS 251LA Introduction to Digital Design and Integrated Circuits Lab 2 Units
Terms offered: Fall 2018, Spring 2018, Fall 2017
This lab lays the foundation of modern digital design by first presenting the scripting and hardware description language base for specification of digital systems and interactions with tool flows. The labs are centered on a large design with the focus on rapid design space exploration. The lab exercises culminate with a project design, e.g. implementation of a 3-stage RISC-V processor with a register file and caches. The design is mapped to simulation and layout specification.

Introduction to Digital Design and Integrated Circuits Lab: Read More [+]

Objectives Outcomes

Course Objectives: Software testing of digital designs is covered leading to a set of exercises that cover the design flow. Digital synthesis, floor-planning, placement and routing are covered, as well as tools to evaluate timing and power consumption. Chip-level assembly is covered, including instantiation of custom blocks: I/O pads, memories, PLLs, etc.

Student Learning Outcomes: Although the syllabus is the same as EECS151LA, the assignments and exams for EECS251LA will have harder problems in labs and in the project that test deeper understanding expected from a graduate level course.

Rules & Requirements

EECS 251LB Introduction to Digital Design and Integrated Circuits Lab 2 Units

Terms offered: Fall 2018, Spring 2018, Fall 2017

This lab covers the design of modern digital systems with Field-Programmable Gate Array (FPGA) platforms. A series of lab exercises provide the background and practice of digital design using a modern FPGA design tool flow. Digital synthesis, partitioning, placement, routing, and simulation tools for FPGAs are covered in detail. The labs exercises culminate with a large design project, e.g., an implementation of a full 3-stage RISC-V processor system, with caches, graphics acceleration, and external peripheral components. The design is mapped and demonstrated on an FPGA hardware platform.

COMPSCI C200A Principles and Techniques of Data Science 4 Units

Offered through: Electrical Engin and Computer Sci

Terms offered: Fall 2018

Explores the data science lifecycle: question formulation, data collection and cleaning, exploratory, analysis, visualization, statistical inference, prediction, and decision-making. Focuses on quantitative critical thinking and key principles and techniques: languages for transforming, querying and analyzing data; algorithms for machine learning methods: regression, classification and clustering; principles of informative visualization; measurement error and prediction; and techniques for scalable data processing. Research term project.

**COMPSCI C249A Introduction to Embedded Systems 4 Units**
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Fall 2017, Fall 2016
This course introduces students to the basics of models, analysis tools, and control for embedded systems operating in real time. Students learn how to combine physical processes with computation. Topics include models of computation, control, analysis and verification, interfacing with the physical world, mapping to platforms, and distributed embedded systems. The course has a strong laboratory component, with emphasis on a semester-long sequence of projects.

**COMPSCI 250 VLSI Systems Design 4 Units**
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2018, Spring 2017, Fall 2015
Unified top-down and bottom-up design of integrated circuits and systems concentrating on architectural and topological issues. VLSI architectures, systolic arrays, self-timed systems. Trends in VLSI development. Physical limits. Tradeoffs in custom-design, standard cells, gate arrays. VLSI design tools.

**COMPSCI 252 Graduate Computer Architecture 4 Units**
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2018, Spring 2017, Fall 2015
Graduate survey of contemporary computer organizations covering: early systems, CPU design, instruction sets, control, processors, busses, ALU, memory, I/O interfaces, connection networks, virtual memory, pipelined computers, multiprocessors, and case studies. Term paper or project is required.

**COMPSCI 260A User Interface Design and Development 4 Units**
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Spring 2018, Fall 2017
The design, implementation, and evaluation of user interfaces. User-centered design and task analysis. Conceptual models and interface metaphors. Usability inspection and evaluation methods. Analysis of user study data. Input methods (keyboard, pointing, touch, tangible) and input models. Visual design principles. Interface prototyping and implementation methodologies and tools. Students will develop a user interface for a specific task and target user group in teams.

**Credit Restrictions:**
- Students will receive no credit for Electrical Engineering/Computer Science C249A after completing Electrical Engineering/Computer Science C149.
- Students will receive no credit for Computer Science 260A after taking Computer Science 160.
- Students will receive no credit for Electrical Engineering C249M/Computer Science C249M after completing Electrical Engineering/Computer Science C249A.
- Students will receive no credit for Computer Science 61B, 61BL, or consent of instructor after completing Computer Science 260A.

**Hours & Format**
- **Fall and/or spring:** 15 weeks - 3 hours of lecture and 4 hours of laboratory per week

COMPSCI 260B Human-Computer Interaction Research 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2017
This course is a broad introduction to conducting research in Human-Computer Interaction. Students will become familiar with seminal and recent literature; learn to review and critique research papers; re-implement and evaluate important existing systems; and gain experience in conducting research. Topics include input devices, computer-supported cooperative work, crowdsourcing, design tools, evaluation methods, search and mobile interfaces, usable security, help and tutorial systems.

COMPSCI 261 Security in Computer Systems 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2017, Fall 2015, Fall 2012
Graduate survey of modern topics in computer security, including protection, access control, distributed access security, firewalls, secure coding practices, safe languages, mobile code, and case studies from real-world systems. May also cover cryptographic protocols, privacy and anonymity, and/or other topics as time permits.
Security in Computer Systems: Read More [+]

Rules & Requirements
Prerequisites: 162

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

COMPSCI 261N Internet and Network Security 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2016, Spring 2015, Spring 2014
Develops a thorough grounding in Internet and network security suitable for those interested in conducting research in the area or those more broadly interested in security or networking. Potential topics include denial-of-service; capabilities; network intrusion detection/prevention; worms; forensics; scanning; traffic analysis; legal issues; web attacks; anonymity; wireless and networked devices; honeypots; botnets; scams; underground economy; attacker infrastructure; research pitfalls.
Internet and Network Security: Read More [+]

Rules & Requirements
Prerequisites: Electrical Engineering 122 or equivalent; Computer Science 161 or familiarity with basic security concepts

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Computer Science/Graduate
Grading: Letter grade.
Instructor: Paxson

Internet and Network Security: Read Less [-]
COMPSCI 262A Advanced Topics in Computer Systems 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Spring 2018, Fall 2016
Graduate survey of systems for managing computation and information, covering a breadth of topics: early systems; volatile memory management, including virtual memory and buffer management; persistent memory systems, including both file systems and transactional storage managers; storage metadata, physical vs. logical naming, schemas, process scheduling, threading and concurrency control; system support for networking, including remote procedure calls, transactional RPC, TCP, and active messages; security infrastructure; extensible systems and APIs; performance analysis and engineering of large software systems. Homework assignments, exam, and term paper or project required.

Advanced Topics in Computer Systems: Read More [+]

Rules & Requirements

Prerequisites: 162 and entrance exam

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Advanced Topics in Computer Systems: Read Less [-]

COMPSCI 262B Advanced Topics in Computer Systems 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2009, Fall 2008, Spring 2006
Continued graduate survey of large-scale systems for managing information and computation. Topics include basic performance measurement; extensibility, with attention to protection, security, and management of abstract data types; index structures, including support for concurrency and recovery; parallelism, including parallel architectures, query processing and scheduling; distributed data management, including distributed and mobile file systems and databases; distributed caching; large-scale data analysis and search. Homework assignments, exam, and term paper or project required.

Advanced Topics in Computer Systems: Read More [+]

Grading: Letter grade.
Instructor: Sen
Compiler Optimization and Code Generation: Read Less [-]
COMPSCI W267 Applications of Parallel Computers 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Not yet offered
Parallel programming, from laptops to supercomputers to the cloud. Goals include writing programs that run fast while minimizing programming effort. Parallel architectures and programming languages and models, including shared memory (e.g., OpenMP on your multicore laptop), distributed memory (MPI and UPC on a supercomputer), GPUs (CUDA and OpenCL), and cloud (MapReduce, Hadoop and Spark). Parallel algorithms and software tools for common computations (e.g., dense and sparse linear algebra, graphs, structured grids). Tools for load balancing, performance analysis, debugging. How high level applications are built (e.g., climate modeling). On-line lectures and office hours.
Applications of Parallel Computers: Read More [+]

Objectives Outcomes
Student Learning Outcomes: An understanding of computer architectures at a high level, in order to understand what can and cannot be done in parallel, and the relative costs of operations like arithmetic, moving data, etc.
To master parallel programming languages and models for different computer architectures
To recognize programming "patterns" to use the best available algorithms and software to implement them.
To understand sources of parallelism and locality in simulation in designing fast algorithms

Rules & Requirements
Prerequisites: Computer Science W266 or the consent of the instructor
Credit Restrictions: Students will receive no credit for Computer Science W267 after completing Computer Science C267.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Online: This is an online course.

Additional Details
Subject/Course Level: Computer Science/Graduate
Grading: Letter grade.
Instructors: Demmel, Yelick

Applications of Parallel Computers: Read Less [-]

COMPSCI 284A Foundations of Computer Graphics 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2018, Spring 2017, Fall 2016
Techniques of modeling objects for the purpose of computer rendering: boundary representations, constructive solids geometry, hierarchical scene descriptions. Mathematical techniques for curve and surface representation. Basic elements of a computer graphics rendering pipeline; architecture of modern graphics display devices. Geometrical transformations such as rotation, scaling, translation, and their matrix representations. Homogeneous coordinates, projective and perspective transformations.
Foundations of Computer Graphics: Read More [+]
Rules & Requirements
Prerequisites: Computer Science 61B or 61BL; programming skills in C, C++, or Java; linear algebra and calculus; or consent of instructor
Credit Restrictions: Students will receive no credit for Computer Science 284A after taking 184.
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Computer Science/Graduate
Grading: Letter grade.
Instructors: Agrawala, Barsky, O'Brien, Ramamoorthi, Sequin
Foundations of Computer Graphics: Read Less [-]
COMPSCI 284B Advanced Computer Graphics Algorithms and Techniques 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2018
This course provides a graduate-level introduction to advanced computer graphics algorithms and techniques. Students should already be familiar with basic concepts such as transformations, scan-conversion, scene graphs, shading, and light transport. Topics covered in this course include global illumination, mesh processing, subdivision surfaces, basic differential geometry, physically based animation, inverse kinematics, imaging and computational photography, and precomputed light transport.
Advanced Computer Graphics Algorithms and Techniques: Read More [+]
Rules & Requirements
Prerequisites: 184 or equivalent
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Advanced Computer Graphics Algorithms and Techniques: Read Less [-]

COMPSCI 286A Introduction to Database Systems 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2018, Fall 2017, Spring 2017
Access methods and file systems to facilitate data access. Hierarchical, network, relational, and object-oriented data models. Query languages for models. Embedding query languages in programming languages. Database services including protection, integrity control, and alternative views of data. High-level interfaces including application generators, browsers, and report writers. Introduction to transaction processing. Database system implementation to be done as term project.
Introduction to Database Systems: Read More [+]
Rules & Requirements
Prerequisites: Computer Science 61B and 61C
Credit Restrictions: Students will receive no credit for CS 286A after taking CS 186.
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Computer Science/Graduate
Grading: Letter grade.
Instructors: Franklin, Hellerstein
Introduction to Database Systems: Read Less [-]

COMPSCI 286B Implementation of Data Base Systems 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2014
Implementation of data base systems on modern hardware systems. Considerations concerning operating system design, including buffering, page size, prefetching, etc. Query processing algorithms, design of crash recovery and concurrency control systems. Implementation of distributed data bases and data base machines.
Implementation of Data Base Systems: Read More [+]
Rules & Requirements
Prerequisites: Computer Science 162 and 186 or 286A
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Computer Science/Graduate
Grading: Letter grade.
Instructors: Franklin, Hellerstein
Implementation of Data Base Systems: Read Less [-]
COMPSCI 287 Advanced Robotics 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2015, Spring 2015, Fall 2013
Advanced topics related to current research in algorithms and artificial intelligence for robotics. Planning, control, and estimation for realistic robot systems, taking into account: dynamic constraints, control and sensing uncertainty, and non-holonomic motion constraints.
Advanced Robotics: Read More [+]

Rules & Requirements

Prerequisites: Instructor consent for undergraduate and masters students

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Grading: Letter grade.

Instructor: Abbeel

Advanced Robotics: Read Less [-]

COMPSCI 287H Algorithmic Human-Robot Interaction 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Not yet offered
As robot autonomy advances, it becomes more and more important to develop algorithms that are not solely functional, but also mindful of the end-user. How should the robot move differently when it’s moving in the presence of a human? How should it learn from user feedback? How should it assist the user in accomplishing day to day tasks? These are the questions we will investigate in this course.

We will contrast existing algorithms in robotics with studies in human-robot interaction, discussing how to tackle interaction challenges in an algorithmic way, with the goal of enabling generalization across robots and tasks. We will also sharpen research skills: giving good talks, experimental design, statistical analysis, literature surveys.

Algorithmic Human-Robot Interaction: Read More [+]

Objectives

Student Learning Outcomes: Students will have gained both knowledge/abilities related to human-robot interaction, as well as to research and presentation skills including being able to apply Bayesian inference and learning techniques to enhance coordination in collaborative tasks.

Students will have gained both knowledge/abilities related to human-robot interaction, as well as to research and presentation skills including being able to generate motion for HRI.

Students will have gained both knowledge/abilities related to human-robot interaction, as well as to research and presentation skills including being able to contrast and relate model-based and model-free learning from demonstration.

Students will have gained both knowledge/abilities related to human-robot interaction, as well as to research and presentation skills including being able to develop a basic understanding of verbal and non-verbal communication.

Students will have gained both knowledge/abilities related to human-robot interaction, as well as to research and presentation skills including being able to ground algorithmic HRI in the relevant psychology background.

Students will have gained both knowledge/abilities related to human-robot interaction, as well as to research and presentation skills including being able to tease out the intricacies of developing algorithms that support HRI.

Students will have gained both knowledge/abilities related to human-robot interaction, as well as to research and presentation skills including being able to analyze and diagram the literature related to a particular topic.

Students will have gained both knowledge/abilities related to human-robot interaction, as well as to research and presentation skills including being able to communicate scientific content to a peer audience.

Students will have gained both knowledge/abilities related to human-robot interaction, as well as to research and presentation skills including being able to critique a scientific paper’s experimental design and analysis.

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Subject/Course Level: Computer Science/Graduate

Grading: Letter grade.

Instructor: Dragan

Algorithmic Human-Robot Interaction: Read Less [-]
COMPSCI 288 Natural Language Processing
4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2014, Spring 2013, Spring 2011
Methods and models for the analysis of natural (human) language data. Topics include: language modeling, speech recognition, linguistic analysis (syntactic parsing, semantic analysis, reference resolution, discourse modeling), machine translation, information extraction, question answering, and computational linguistics techniques.
Natural Language Processing: Read More [+]
Rules & Requirements
Prerequisites: CS188 required, CS170 recommended

COMPSCI 289A Introduction to Machine Learning 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Spring 2018, Fall 2017
This course provides an introduction to theoretical foundations, algorithms, and methodologies for machine learning, emphasizing the role of probability and optimization and exploring a variety of real-world applications. Students are expected to have a solid foundation in calculus and linear algebra as well as exposure to the basic tools of logic and probability, and should be familiar with at least one modern, high-level programming language.
Introduction to Machine Learning: Read More [+]
Rules & Requirements
Prerequisites: Mathematics 53, 54; Computer Science 70; Computer Science 188 or consent of instructor
Credit Restrictions: Students will receive no credit for Comp Sci 289A after taking Comp Sci 189.

COMPSCI 294 Special Topics 1 - 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Spring 2018, Fall 2017
Topics will vary from semester to semester. See Computer Science Division announcements.
Special Topics: Read More [+]
Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Fall and/or spring:
4 weeks - 3-15 hours of lecture per week
6 weeks - 3-9 hours of lecture per week
8 weeks - 2-6 hours of lecture per week
10 weeks - 2-5 hours of lecture per week
15 weeks - 1-3 hours of lecture per week

COMPSCI 297 Field Studies in Computer Science 12.0 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2016, Fall 2015, Summer 2015 10 Week Session
Supervised experience in off-campus companies relevant to specific aspects and applications of electrical engineering and/or computer science. Written report required at the end of the semester.
Field Studies in Computer Science: Read More [+]
Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Fall and/or spring: 15 weeks - 1-12 hours of independent study per week
Summer: 6 weeks - 1-30 hours of independent study per week
8 weeks - 1.5-22.5 hours of independent study per week
10 weeks - 1-18 hours of independent study per week

Additional Details
Subject/Course Level: Computer Science/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.
Field Studies in Computer Science: Read Less [-]
COMPSCI 298 Group Studies Seminars, or Group Research 1 - 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Spring 2018, Fall 2017
Advanced study in various subjects through seminars on topics to be selected each year, informal group studies of special problems, group participation in comprehensive design problems, or group research on complete problems for analysis and experimentation.
Group Studies Seminars, or Group Research: Read More [+]

Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1-4 hours of lecture per week

Additional Details
Subject/Course Level: Computer Science/Graduate
Grading: The grading option will be decided by the instructor when the class is offered.

Subject/Course Level: Computer Science/Professional course for teachers or prospective teachers
Grading: Letter grade.

Instructor: Garcia

Designing Computer Science Education: Read Less [-]
COMPSCI 370 Introduction to Teaching Computer Science 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Spring 2018
This is a course for aspiring teachers or those who want to instruct with expertise from evidence-based research and proven best practices. It provides pedagogical training by introducing the Big Ideas of Teaching and Learning, and illustrating how to put them into practice. The course is divided into three sections— instructing the individual; a group; and psycho-social factors that greatly affect learning at any level. These sections are designed to enhance any intern’s, tutor’s, or TA’s skillset. Class is discussion based, and covers theoretical and practical pedagogical aspects to teaching in STEM. An integral feature of the course involves providing weekly tutoring sessions.

Introduction to Teaching Computer Science: Read More [+]

Rules & Requirements

Prerequisites: Prerequisite satisfied Concurrently: experience tutoring or as an academic intern; or concurrently serving as an academic intern while taking course

Hours & Format

Fall and/or spring: 15 weeks - 1.5 hours of lecture, 3 hours of recitation, and 3 hours of tutorial per week

Additional Details

Subject/Course Level: Computer Science/Professional course for teachers or prospective teachers

Grading: Offered for satisfactory/unsatisfactory grade only.

Instructor: Hunn

COMPSCI 602 Individual Study for Doctoral Students 1 - 8 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2015, Fall 2014, Spring 2014
Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D. (and other doctoral degrees).

Individual Study for Doctoral Students: Read More [+]

Rules & Requirements

Credit Restrictions: Course does not satisfy unit or residence requirements for doctoral degree.

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format

Fall and/or spring: 15 weeks - 0 hours of independent study per week
Summer: 8 weeks - 6-45 hours of independent study per week

Additional Details

Subject/Course Level: Computer Science/Graduate examination preparation

Grading: Offered for satisfactory/unsatisfactory grade only.

Individual Study for Doctoral Students: Read Less [-]

Electrical Engineering

EL ENG 206A Introduction to Robotics 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2017, Fall 2016, Fall 2015
An introduction to the kinematics, dynamics, and control of robot manipulators, robotic vision, and sensing. The course will cover forward and inverse kinematics of serial chain manipulators, the manipulator Jacobian, force relations, dynamics and control-position, and force control. Proximity, tactile, and force sensing. Network modeling, stability, and fidelity in teleoperation and medical applications of robotics.

Introduction to Robotics: Read More [+]

Rules & Requirements

Prerequisites: 120 or equivalent, or consent of instructor

Credit Restrictions: Students will receive no credit for 206A after taking C125/Bioengineering C125 or EE C106A

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture, 1 hour of discussion, and 3 hours of laboratory per week

Additional Details

Subject/Course Level: Electrical Engineering/Graduate

Grading: Letter grade.

Instructor: Bajcsy

Formerly known as: Electrical Engineering 215A

Introduction to Robotics: Read Less [-]
EL ENG 206B Robotic Manipulation and Interaction 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2018, Spring 2017
This course is a sequel to EECS 125/225, which covers kinematics, dynamics and control of a single robot. This course will cover dynamics and control of groups of robotic manipulators coordinating with each other and interacting with the environment. Concepts will include an introduction to grasping and the constrained manipulation, contacts and force control for interaction with the environment. We will also cover active perception guided manipulation, as well as the manipulation of non-rigid objects. Throughout, we will emphasize design and human-robot interactions, and applications to applications in manufacturing, service robotics, tele-surgery, and locomotion.

Course Objectives: To teach students the connection between the geometry, physics of manipulators with experimental setups that include sensors, control of large degrees of freedom manipulators, mobile robots and different grippers.

Student Learning Outcomes: By the end of the course students will be able to build a complete system composed of perceptual planning and autonomously controlled manipulators and mobile systems, justified by predictive theoretical models of performance.

Rules & Requirements
Prerequisites: Electrical Engineering 206A/Bioengineering C125 or consent of instructor

EL ENG 210 Applied Electromagnetic Theory 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2011, Spring 2010, Fall 2006
Advanced treatment of classical electromagnetic theory with engineering applications. Boundary value problems in electrostatics. Applications of Maxwell's Equations to the study of waveguides, resonant cavities, optical fiber guides, Gaussian optics, diffraction, scattering, and antennas.

Rules & Requirements
Prerequisites: 117, or Physics 110A, 110B

EL ENG 213A Power Electronics 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2018, Spring 2017
Power conversion circuits and techniques. Characterization and design of magnetic devices including transformers, inductors, and electromagnetic actuators. Characteristics of power semiconductor devices, including power diodes, SCRs, MOSFETs, IGBTs, and emerging wide bandgap devices. Applications to renewable energy systems, high-efficiency lighting, power management in mobile electronics, and electric machine drives. Simulation based laboratory and design project.

Rules & Requirements
Prerequisites: EE105 or consent of instructor

Credit Restrictions: Students who have received credit for EE113 will not receive credit for EE213A.
**EL ENG C213 X-rays and Extreme Ultraviolet Radiation 3 Units**
Offered through: Electrical Engin and Computer Sci  
Terms offered: Fall 2017, Fall 2016, Spring 2009  
This course explores modern developments in the physics and applications of x-rays and extreme ultraviolet (EUV) radiation. It begins with a review of electromagnetic radiation at short wavelengths including dipole radiation, scattering and refractive index, using a semi-classical atomic model. Subject matter includes the generation of x-rays with synchrotron radiation, high harmonic generation, x-ray free electron lasers, laser-plasma sources. Spatial and temporal coherence concepts are explained. Optics appropriate for this spectral region are described. Applications include nanoscale and astrophysical imaging, femtosecond and attosecond probing of electron dynamics in molecules and solids, EUV lithography, and materials characteristics.

**Rules & Requirements**

Prerequisites: Physics 110, 137, and Mathematics 53, 54 or equivalent

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Electrical Engineering/Graduate  
Grading: Letter grade.  
Instructor: Attwood  
Also listed as: AST C210

X-rays and Extreme Ultraviolet Radiation: Read Less [-]

**EL ENG 218A Introduction to Optical Engineering 3 Units**
Offered through: Electrical Engin and Computer Sci  
Terms offered: Fall 2017, Fall 2016, Fall 2015  

**Rules & Requirements**

Credit Restrictions: Students will receive no credit for Electrical Engineering 218A after taking Electrical Engineering 118 or 119.

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Electrical Engineering/Graduate  
Grading: Letter grade.  
Instructor: Waller

Introduction to Optical Engineering: Read Less [-]

**EL ENG 219A Numerical Simulation and Modeling 4 Units**
Offered through: Electrical Engin and Computer Sci  
Terms offered: Fall 2017, Fall 2015, Fall 2014  
Numerical simulation and modeling are enabling technologies that pervade science and engineering. This course provides a detailed introduction to the fundamental principles of these technologies and their translation to engineering practice. The course emphasizes hands-on programming in MATLAB and application to several domains, including circuits, nanotechnology, and biology.

**Rules & Requirements**

Prerequisites: Consent of instructor; a course in linear algebra and on circuits is very useful

Hours & Format

Fall and/or spring: 15 weeks - 4 hours of lecture per week

Additional Details

Subject/Course Level: Electrical Engineering/Graduate  
Grading: Letter grade.  
Instructor: Roychowdhury

Numerical Simulation and Modeling: Read Less [-]

**EL ENG 219B Logic Synthesis 4 Units**
Offered through: Electrical Engin and Computer Sci  
Terms offered: Spring 2016, Spring 2015, Spring 2011  
The course covers the fundamental techniques for the design and analysis of digital circuits. The goal is to provide a detailed understanding of basic logic synthesis and analysis algorithms, and to enable students to apply this knowledge in the design of digital systems and EDA tools. The course will present combinational circuit optimization (two-level and multi-level synthesis), sequential circuit optimization (state encoding, retiming), timing analysis, testing, and logic verification.

**Rules & Requirements**

Prerequisites: Consent of instructor

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Electrical Engineering/Graduate  
Grading: Letter grade.  
Logic Synthesis: Read Less [-]
EL ENG C220A Advanced Control Systems I
3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Fall 2017, Fall 2016
Input-output and state space representation of linear continuous and
discrete time dynamic systems. Controllability, observability, and stability.
Modeling and identification. Design and analysis of single and multi-
variable feedback control systems in transform and time domain. State
observer. Feedforward/preview control. Application to engineering
systems.
Advanced Control Systems I: Read More [+]

Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of
discussion per week

Additional Details
Subject/Course Level: Electrical Engineering/Graduate
Grading: Letter grade.
Instructors: Borrelli, Horowitz, Tomizuka, Tomlin
Also listed as: MEC ENG C232

EL ENG C220B Experiential Advanced
Control Design I 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Fall 2017, Fall 2016
Experience-based learning in the design of SISO and MIMO feedback
controllers for linear systems. The student will master skills needed to
apply linear control design and analysis tools to classical and modern
control problems. In particular, the participant will be exposed to and
develop expertise in two key control design technologies: frequency-
domain control synthesis and time-domain optimization-based approach.
Experiential Advanced Control Design I: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of
laboratory per week

Additional Details
Subject/Course Level: Electrical Engineering/Graduate
Grading: Letter grade.
Also listed as: MEC ENG C231A

Experiential Advanced Control Design I: Read Less [-]

EL ENG C220C Experiential Advanced
Control Design II 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2018, Spring 2017
Experience-based learning in the design, analysis, and verification of
automatic control systems. The course emphasizes the use of computer-
aided design techniques through case studies and design tasks. The
student will master skills needed to apply advanced model-based control
analysis, design, and estimation to a variety of industrial applications. The
role of these specific design methodologies within the larger endeavor of
control design is also addressed.
Experiential Advanced Control Design II: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of
laboratory per week

Additional Details
Subject/Course Level: Electrical Engineering/Graduate
Grading: Letter grade.
Also listed as: MEC ENG C231B

Experiential Advanced Control Design II: Read Less [-]
EL ENG C220D Input/Output Methods for Compositional System Analysis 2 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Not yet offered
Introduction to input/output concepts from control theory, systems as operators in signal spaces, passivity and small-gain theorems, dissipativity theory, integral quadratic constraints.
Compositional stability and performance certification for interconnected systems from subsystems input/output properties. Case studies in multi-agent systems, biological networks, Internet congestion control, and adaptive control.

Objectives Outcomes
Course Objectives:
- Standard computational tools for control synthesis and verification do not scale well to large-scale, networked systems in emerging applications. This course presents a compositional methodology suitable when the subsystems are amenable to analytical and computational methods but the interconnection, taken as a whole, is beyond the reach of these methods. The main idea is to break up the task of certifying desired stability and performance properties into subproblems of manageable size using input/output properties. Students learn about the fundamental theory, as well as relevant algorithms and applications in several domains.

Objectives:
- Students will be able to apply the concepts of input/output theory to analyze and design systems.
- Students will be able to use compositional methods to verify stability and performance properties for interconnected systems.
- Students will be able to apply the theory to real-world systems in domains such as multi-agent systems, biological networks, and Internet congestion control.

Additional Details
- Subject/Course Level: Electrical Engineering/Graduate
- Grading: Letter grade.
- Instructors: Arcak, Packard
- Also listed as: MEC ENG C220D

EL ENG 221A Linear System Theory 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Fall 2017, Fall 2016

Rules & Requirements
Prerequisites: 120; Mathematics 110 recommended

Additional Details
- Subject/Course Level: Electrical Engineering/Graduate
- Grading: Letter grade.

EL ENG 222 Nonlinear Systems--Analysis, Stability and Control 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2017, Spring 2016, Spring 2015

Rules & Requirements
Prerequisites: 221A (may be taken concurrently)

Additional Details
- Subject/Course Level: Electrical Engineering/Graduate
- Grading: Letter grade.

EL ENG 224A Digital Communications 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2010, Fall 2009, Fall 2008
Introduction to the basic principles of the design and analysis of modern digital communication systems. Topics include source coding; channel coding; baseband and passband modulation techniques; receiver design; channel equalization; information theoretic techniques; block, convolutional, and trellis coding techniques; multiuser communications and spread spectrum; multi-carrier techniques and FDM: carrier and symbol synchronization. Applications to design of digital telephone modems, compact disks, and digital wireless communication systems are illustrated. The concepts are illustrated by a sequence of MATLAB exercises.

EL ENG C225E Principles of Magnetic Resonance Imaging 4 Units
Offered through: Electrical Engin and Computer Sci
Fundamentals of MRI including signal-to-noise ratio, resolution, and contrast as dictated by physics, pulse sequences, and instrumentation. Image reconstruction via 2D FFT methods. Fast imaging reconstruction via convolution-back projection and gridding methods and FFTs. Hardware for modern MRI scanners including main field, gradient fields, RF coils, and shim supplies. Software for MRI including imaging methods such as 2D FT, RARE, SSFP, spiral and echo planar imaging methods. Principles of Magnetic Resonance Imaging: Read More [+]
Objectives Outcomes
Course Objectives: Graduate level understanding of physics, hardware, and systems engineering description of image formation, and image reconstruction in MRI. Experience in Imaging with different MR Imaging systems. This course should enable students to begin graduate level research at Berkeley (Neuroscience labs, EECS and Bioengineering), LBNL or at UCSF (Radiology and Bioengineering) at an advanced level and make research-level contribution
Rules & Requirements
Prerequisites: Either Electrical Engineering 120 or Bioengineering C165/ Electrical Engineering C145B or consent of instructor
Credit Restrictions: Students will receive no credit for Bioengineering C265/El Engineering C225E after taking El Engineering 265.
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture, 1 hour of discussion, and 3 hours of laboratory per week
Additional Details

EL ENG 227BT Convex Optimization 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Fall 2017, Fall 2016
Convex optimization is a class of nonlinear optimization problems where the objective to be minimized, and the constraints, are both convex. The course covers some convex optimization theory and algorithms, and describes various applications arising in engineering design, machine learning and statistics, finance, and operations research. The course includes laboratory assignments, which consist of hands-on experiments with the optimization software CVX, and a discussion section.

EL ENG 229A Information Theory and Coding
3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Fall 2017, Fall 2016
Fundamental bounds of Shannon theory and their application. Source and channel coding theorems. Galois field theory, algebraic error-correction codes. Private and public-key cryptographic systems.

EL ENG 229B Error Control Coding 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2016, Fall 2013, Fall 2012
Error control codes are an integral part of most communication and recording systems where they are primarily used to provide resiliency to noise. In this course, we will cover the basics of error control coding for reliable digital transmission and storage. We will discuss the major classes of codes that are important in practice, including Reed Muller codes, cyclic codes, Reed Solomon codes, convolutional codes, concatenated codes, turbo codes, and low density parity check codes. The relevant background material from finite field and polynomial algebra will be developed as part of the course. Overview of topics: binary linear block codes; Reed Muller codes; Galois fields; linear block codes over a finite field; cyclic codes; BCH and Reed Solomon codes; convolutional codes and trellis based decoding, message passing decoding algorithms; trellis based soft decision decoding of block codes; turbo codes; low density parity check codes.

EL ENG 230A Integrated-Circuit Devices 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Spring 2018, Fall 2017
Overview of electronic properties of semiconductors. Metal-semiconductor contacts, pn junctions, bipolar transistors, and MOS field-effect transistors. Properties that are significant to device operation for integrated circuits. Silicon device fabrication technology.

EL ENG 230B Solid State Devices 4 Units
Offered through: Electrical Engin and Computer Sci
Physical principles and operational characteristics of semiconductor devices. Emphasis is on MOS field-effect transistors and their behaviors dictated by present and probable future technologies. Metal-oxide-semiconductor systems, short-channel and high field effects, device modeling, and impact on analog, digital circuits.

EL ENG C235 Nanoscale Fabrication 4 Units
Offered through: Electrical Engineering and Computer Science
Terms offered: Spring 2016, Spring 2015, Spring 2013
This course discusses various top-down and bottom-up approaches to synthesizing and processing nanostructured materials. The topics include fundamentals of self assembly, nano-imprint lithography, electron beam lithography, nanowire and nanotube synthesis, quantum dot synthesis (strain patterned and colloidal), post-synthesis modification (oxidation, doping, diffusion, surface interactions, and etching techniques). In addition, techniques to bridging length scales such as heterogeneous integration will be discussed. We will discuss new electronic, optical, thermal, mechanical, and chemical properties brought forth by the very small sizes.
Nanoscale Fabrication: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

EL ENG 240A Analog Integrated Circuits 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Spring 2018, Fall 2017
Single and multiple stage transistor amplifiers. Operational amplifiers, Feedback amplifiers, 2-port formulation, source, load, and feedback network loading. Frequency response of cascaded amplifiers, gain-bandwidth exchange, compensation, dominant pole techniques, root locus. Supply and temperature independent biasing and references. Selected applications of analog circuits such as analog-to-digital converters, switched capacitor filters, and comparators. Hardware laboratory and design project.

Rules & Requirements

Prerequisites: Electrical Engineering 105
Credit Restrictions: Students will receive no credit for Electrical Engineering 240A after taking Electrical Engineering 140.

EL ENG 240B Advanced Analog Integrated Circuits 4 Units
Offered through: Electrical Engin and Computer Sci

Rules & Requirements

Prerequisites: EE140/EE240A or equivalent

EL ENG 240C Analysis and Design of VLSI Analog-Digital Interface Integrated Circuits 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2017, Fall 2015, Fall 2014
Architectural and circuit level design and analysis of integrated analog-to-digital and digital-to-analog interfaces in CMOS and BICMOS VLSI technology. Analog-digital converters, digital-analog converters, sample/hold amplifiers, continuous and switched-capacitor filters. RF integrated electronics including synthesizers, LNA's, and baseband processing. Low power mixed signal design. Data communications functions including clock recovery. CAD tools for analog design including simulation and synthesis.

**EL ENG 247A Introduction to Microelectromechanical Systems (MEMS) 3 Units**
Offered through: Electrical Engin and Computer Sci  
Terms offered: Fall 2018, Fall 2017, Fall 2016  
This course will teach fundamentals of micromachining and microfabrication techniques, including planar thin-film process technologies, photolithographic techniques, deposition and etching techniques, and the other technologies that are central to MEMS fabrication. It will pay special attention to teaching of fundamentals necessary for the design and analysis of devices and systems in mechanical, electrical, fluidic, and thermal energy/signal domains, and will teach basic techniques for multi-domain analysis. Fundamentals of sensing and transduction mechanisms including capacitive and piezoresistive techniques, and design and analysis of micromachined miniature sensors and actuators using these techniques will be covered.

---

**Rules & Requirements**

**Prerequisites:** Electrical Engineering 40 or 100 or consent of instructor required  

**Credit Restrictions:** Students will receive no credit for EE 247A after taking EE 147.

---

**Hours & Format**

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

---

**Additional Details**

**Subject/Course Level:** Electrical Engineering/Graduate  

**Grading:** Letter grade.  

**Instructors:** Maharbiz, Nguyen, Pister

---

**EL ENG C247B Introduction to MEMS Design 4 Units**
Offered through: Electrical Engin and Computer Sci  
Physics, fabrication, and design of micro-electromechanical systems (MEMS). Micro and nanofabrication processes, including silicon surface and bulk micromachining and non-silicon micromachining. Integration strategies and assembly processes. Microsensor and microactuator devices: electrostatic, piezoresistive, piezoelectric, thermal, magnetic transduction. Electronic position-sensing circuits and electrical and mechanical noise. CAD for MEMS. Design project is required.

---

**Rules & Requirements**

**Prerequisites:** Graduate standing in engineering or science; undergraduates with consent of instructor

---

**Hours & Format**

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

EL ENG 248C Numerical Modeling and Analysis: Nonlinear Systems and Noise
4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Prior to 2007
Numerical modelling and analysis techniques are widely used in scientific and engineering practice; they are also an excellent vehicle for understanding and concretizing theory.

This course covers topics important for a proper understanding of nonlinearity and noise: periodic steady state and envelope (“RF”) analyses; oscillatory systems; nonstationary and phase noise; and homotopy/continuation techniques for solving “difficult” equation systems. An underlying theme of the course is relevance to different physical domains, from electronics (e.g., analog/RF/mixed-signal circuits, high-speed digital circuits, interconnect, etc.) to optics, nanotechnology, chemistry, biology and mechanics. Hands-on coding using the MATLAB-based Berkeley Model

Numerical Modeling and Analysis: Nonlinear Systems and Noise: Read More [+]

Objectives Outcomes

Course Objectives:
- Homotopy techniques for robust nonlinear equation solution
- Modelling and analysis of oscillatory systems
  - harmonic, ring and relaxation oscillators
  - oscillator steady state analysis
  - perturbation analysis of amplitude-stable oscillators
- RF (nonlinear periodic steady state) analysis
  - harmonic balance and shooting
  - Multi-time PDE and envelope methods
  - perturbation analysis of periodic systems (Floquet theory)
  - cyclostationary noise analysis
  - concepts of phase noise in oscillators

Using MAPP for fast/convenient modelling and analysis

Student Learning Outcomes: Students will develop a facility in the above topics and be able to apply them widely across science and engineering.

Rules & Requirements

Prerequisites: Consent of Instructor

Hours & Format

Fall and/or spring: 15 weeks - 4 hours of lecture per week

EL ENG C261 Medical Imaging Signals and Systems 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Fall 2017, Fall 2016
Biomedical imaging is a clinically important application of engineering, applied mathematics, physics, and medicine. In this course, we apply linear systems theory and basic physics to analyze X-ray imaging, computerized tomography, nuclear medicine, and MRI. We cover the basic physics and instrumentation that characterizes medical image as an ideal perfect-resolution image blurred by an impulse response. This material could prepare the student for a career in designing new medical imaging systems that reliably detect small tumors or infarcts.

Medical Imaging Signals and Systems: Read More [+]

Objectives Outcomes

Course Objectives:
• understand how 2D impulse response or 2D spatial frequency transfer function (or Modulation Transfer Function) allow one to quantify the spatial resolution of an imaging system.
• understand 2D sampling requirements to avoid aliasing
• understand 2D filtered backprojection reconstruction from projections based on the projection-slice theorem of Fourier Transforms
• understand the concept of image reconstruction as solving a mathematical inverse problem.
• understand the limitations of poorly conditioned inverse problems and noise amplification
• understand how diffraction can limit resolution—but not for the imaging systems in this class
• understand the hardware components of an X-ray imaging scanner
• understand the physics and hardware limits to spatial resolution of an X-ray imaging system
• understand tradeoffs between depth, contrast, and dose for X-ray sources
• understand resolution limits for CT scanners
• understand how to reconstruct a 2D CT image from projection data using the filtered backprojection algorithm
• understand the hardware and physics of Nuclear Medicine scanners
• understand how PET and SPECT images are created using filtered backprojection
• understand resolution limits of nuclear medicine scanners
• understand MRI hardware components, resolution limits and image reconstruction via a 2D FFT
• understand how to construct a medical imaging scanner that will achieve a desired spatial resolution specification.

Student Learning Outcomes:
• students will be tested for their understanding of the key concepts above
• undergraduate students will apply to graduate programs and be admitted
• students will apply this knowledge to their research at Berkeley, UCSF, the national labs or elsewhere
• students will be hired by companies that create, sell, operate or consult in biomedical imaging

Subject/Course Level: Electrical Engineering/Graduate
Grading: Letter grade.
Advanced Topics in Electrical Engineering: Advanced Topics in Bioelectronics: Read Less [-]

EL ENG 290Q Advanced Topics in Electrical Engineering: Advanced Topics in Communication Networks 1 - 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2017, Spring 2016, Fall 2014
The 290 courses cover current topics of research interest in electrical engineering. The course content may vary from semester to semester.
Advanced Topics in Electrical Engineering: Advanced Topics in Communication Networks: Read More [+]
Rules & Requirements
Prerequisites: Consent of instructor
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Fall and/or spring: 15 weeks - 1-3 hours of lecture per week
Additional Details
Subject/Course Level: Electrical Engineering/Graduate
Grading: Letter grade.
Advanced Topics in Electrical Engineering: Advanced Topics in Communication Networks: Read Less [-]
EL ENG 290S Advanced Topics in Electrical Engineering: Advanced Topics in Communications and Information Theory 1 - 3 Units
Offered through: Electrical Engineering and Computer Science
Terms offered: Fall 2018, Fall 2016, Fall 2009
The 290 courses cover current topics of research interest in electrical engineering. The course content may vary from semester to semester.
Advanced Topics in Electrical Engineering: Advanced Topics in Communications and Information Theory: Read More [+]
Rules & Requirements
Prerequisites: Consent of instructor
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Fall and/or spring: 15 weeks - 1-3 hours of lecture per week
Additional Details
Subject/Course Level: Electrical Engineering/Graduate
Grading: Letter grade.
Advanced Topics in Electrical Engineering: Advanced Topics in Communications and Information Theory: Read Less [-]

EL ENG 290T Advanced Topics in Electrical Engineering: Advanced Topics in Signal Processing 1 - 3 Units
Offered through: Electrical Engineering and Computer Science
Terms offered: Fall 2018, Fall 2017, Fall 2016
The 290 courses cover current topics of research interest in electrical engineering. The course content may vary from semester to semester.
Advanced Topics in Electrical Engineering: Advanced Topics in Signal Processing: Read More [+]
Rules & Requirements
Prerequisites: Consent of instructor
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Fall and/or spring: 15 weeks - 1-3 hours of lecture per week
Additional Details
Subject/Course Level: Electrical Engineering/Graduate
Grading: Letter grade.
Instructor: Subramanian
Advanced Topics in Electrical Engineering: Advanced Topics in Signal Processing: Read Less [-]

EL ENG 290Y Advanced Topics in Electrical Engineering: Organic Materials in Electronics 3 Units
Offered through: Electrical Engineering and Computer Science
Terms offered: Spring 2014, Spring 2013, Fall 2009
Organic materials are seeing increasing application in electronics applications. This course will provide an overview of the properties of the major classes of organic materials with relevance to electronics. Students will study the technology, physics, and chemistry of their use in the three most rapidly growing major applications--energy conversion/generation devices (fuel cells and photovoltaics), organic light-emitting diodes, and organic transistors.
Advanced Topics in Electrical Engineering: Organic Materials in Electronics: Read More [+]
Rules & Requirements
Prerequisites: 130; undergraduate general chemistry
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Electrical Engineering/Graduate
Grading: Letter grade.
Instructor: Subramanian
Advanced Topics in Electrical Engineering: Organic Materials in Electronics: Read Less [-]
EL ENG W290C Advanced Topics in Circuit Design 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Prior to 2007
Seminar-style course presenting an in-depth perspective on one specific domain of integrated circuit design. Most often, this will address an application space that has become particularly relevant in recent times. Examples are serial links, ultra low-power design, wireless transceiver design, etc.
Advanced Topics in Circuit Design: Read More [+]
Rules & Requirements
Prerequisites: MAS-IC students only
Credit Restrictions: Students will receive no credit for W290C after taking 290C.
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of web-based lecture per week
Summer: 10 weeks - 4.5 hours of web-based lecture per week
Online: This is an online course.
Additional Details
Subject/Course Level: Electrical Engineering/Graduate
Grading: Letter grade.
Advanced Topics in Circuit Design: Read Less [-]

EL ENG C291 Control and Optimization of Distributed Parameters Systems 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2017, Spring 2016, Spring 2015, Spring 2014
Control and Optimization of Distributed Parameters Systems: Read More [+]
Rules & Requirements
Prerequisites: Engineering 77, Mathematics 54 (or equivalent), or consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Electrical Engineering/Graduate
Grading: Letter grade.
Also listed as: CIV ENG C291F/MEC ENG C236
Control and Optimization of Distributed Parameters Systems: Read Less [-]

EL ENG C291E Hybrid Systems and Intelligent Control 3 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Spring 2018, Spring 2016, Spring 2014
Hybrid Systems and Intelligent Control: Read More [+]
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Electrical Engineering/Graduate
Grading: Letter grade.
Formerly known as: 291E
Also listed as: MEC ENG C290S
Hybrid Systems and Intelligent Control: Read Less [-]
EL ENG 297 Field Studies in Electrical Engineering 12 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Summer 2018 8 Week Session, Fall 2011, Fall 2010
Supervised experience in off-campus companies relevant to specific aspects and applications of electrical engineering. Written report required at the end of the semester.

Field Studies in Electrical Engineering: Read More [+]

Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1-12 hours of independent study per week
Summer: 8 weeks - 1-12 hours of independent study per week

Additional Details
Subject/Course Level: Electrical Engineering/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.

Field Studies in Electrical Engineering: Read Less [-]

EL ENG 298 Group Studies, Seminars, or Group Research 1 - 4 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Spring 2018, Fall 2017
Advanced study in various subjects through special seminars on topics to be selected each year, informal group studies of special problems, group participation in comprehensive design problems, or group research on complete problems for analysis and experimentation.

Group Studies, Seminars, or Group Research: Read More [+]

Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 0 hours of lecture per week

Additional Details
Subject/Course Level: Electrical Engineering/Graduate
Grading: The grading option will be decided by the instructor when the class is offered.

Group Studies, Seminars, or Group Research: Read Less [-]

EL ENG 299 Individual Research 1 - 12 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Summer 2016 10 Week Session, Summer 2016 8 Week Session
Investigation of problems in electrical engineering.

Individual Research: Read More [+]

Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1-12 hours of independent study per week
Summer:
6 weeks - 2.5-30 hours of independent study per week
8 weeks - 1.5-22.5 hours of independent study per week

Additional Details
Subject/Course Level: Electrical Engineering/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.

Individual Research: Read Less [-]

EL ENG 375 Teaching Techniques for Electrical Engineering 2 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2018, Spring 2018, Fall 2017
Discussion of effective teaching techniques. Use of educational objectives, alternative forms of instruction, and proven techniques to enhance student learning. This course is intended to orient new student instructors to more effectively teach courses offered by the Department of Electrical Engineering and Computer Sciences at UC Berkeley.

Teaching Techniques for Electrical Engineering: Read More [+]

Rules & Requirements
Prerequisites: Teaching assistant or graduate student
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1.5 hours of seminar per week

Additional Details
Subject/Course Level: Electrical Engineering/Professional course for teachers or prospective teachers
Grading: Offered for satisfactory/unsatisfactory grade only.

Teaching Techniques for Electrical Engineering: Read Less [-]
EL ENG 602 Individual Study for Doctoral Students 1 - 8 Units
Offered through: Electrical Engin and Computer Sci
Terms offered: Fall 2016, Fall 2015, Fall 2014
Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D. (and other doctoral degrees).

Individual Study for Doctoral Students: Read More [+]

Rules & Requirements

Credit Restrictions: Course does not satisfy unit or residence requirements for doctoral degree.

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format

Fall and/or spring: 15 weeks - 0 hours of independent study per week

Summer: 8 weeks - 6-45 hours of independent study per week

Additional Details

Subject/Course Level: Electrical Engineering/Graduate examination preparation

Grading: Offered for satisfactory/unsatisfactory grade only.

Individual Study for Doctoral Students: Read Less [-]
