Materials Science and Engineering

The Department of Materials Science and Engineering offers three graduate degree programs: the Master of Engineering (MEng), 5th Year Bachelor of Science and Master of Science (BS/MS), and the Doctor of Philosophy (PhD).

Master of Engineering (MEng)

In collaboration with other departments in the College of Engineering, Materials Science and Engineering is offering a professional master’s degree. The accelerated program is designed to develop professional engineering leaders in materials science and engineering who are seeking knowledge and leadership experience in MSE.

Prospective students will be engineers, typically with industrial experience, who aspire to substantially advance in their careers and ultimately to lead large, complex organizations, both in the public and private sectors.

You may choose to apply to either the full-time one-year program or part-time program for working professionals. You will be asked to choose which option you will be considered for during the application process. Both options employ the same standards and criteria for admissions.

5th Year Bachelor of Science and Master of Science (BS/MS)

The Department of Materials Science and Engineering offers a five-year combined BS/MS program to our undergraduate student cohort. In this program, the existing four-year undergraduate program (BS) will be augmented with a fifth year of graduate study that provides a professionally-oriented component, preparing students for careers in engineering or engineering management within the business, government, and industrial sectors. This five-year program emphasizes interdisciplinary study through an independent project coupled to coursework.

Doctor of Philosophy (PhD)

Students pursuing the PhD may also declare a designated emphasis (DE) in one of the following programs: Communication, Computation, and Statistics; Computational and Genomic Biology; Computational Science and Engineering; Energy Science and Technology; or Nanoscale Science and Engineering.

Admission to the University

Minimum Requirements for Admission

The following minimum requirements apply to all graduate programs and will be verified by the Graduate Division:

1. A bachelor’s degree or recognized equivalent from an accredited institution;
2. A grade point average of B or better (3.0);
3. If the applicant comes from a country or political entity (e.g., Quebec) where English is not the official language, adequate proficiency in English to do graduate work, as evidenced by a TOEFL score of at least 90 on the iBT test, 570 on the paper-and-pencil test, or an IELTS Band score of at least 7 (note that individual programs may set higher levels for any of these); and
4. Sufficient undergraduate training to do graduate work in the given field.

Applicants Who Already Hold a Graduate Degree

The Graduate Council views academic degrees not as vocational training certificates, but as evidence of broad training in research methods, independent study, and articulation of learning. Therefore, applicants who already have academic graduate degrees should be able to pursue new subject matter at an advanced level without need to enroll in a related or similar graduate program.

Programs may consider students for an additional academic master’s or professional master’s degree only if the additional degree is in a distinctly different field.

Applicants admitted to a doctoral program that requires a master’s degree to be earned at Berkeley as a prerequisite (even though the applicant already has a master’s degree from another institution in the same or a closely allied field of study) will be permitted to undertake the second master’s degree, despite the overlap in field.

The Graduate Division will admit students for a second doctoral degree only if they meet the following guidelines:

1. Applicants with doctoral degrees may be admitted for an additional doctoral degree only if that degree program is in a general area of knowledge distinctly different from the field in which they earned their original degree. For example, a physics PhD could be admitted to a doctoral degree program in music or history; however, a student with a doctoral degree in mathematics would not be permitted to add a PhD in statistics.
2. Applicants who hold the PhD degree may be admitted to a professional doctorate or professional master’s degree program if there is no duplication of training involved.

Applicants may apply only to one single degree program or one concurrent degree program per admission cycle.

Required Documents for Applications

1. Transcripts: Applicants may upload unofficial transcripts with your application for the departmental initial review. If the applicant is admitted, then official transcripts of all college-level work will be required. Official transcripts must be in sealed envelopes as issued by the school(s) attended. If you have attended Berkeley, upload your unofficial transcript with your application for the departmental initial review. If you are admitted, an official transcript with evidence of degree conferral will not be required.
2. Letters of recommendation: Applicants may request online letters of recommendation through the online application system. Hard copies of recommendation letters must be sent directly to the program, not the Graduate Division.
3. Evidence of English language proficiency: All applicants from countries or political entities in which the official language is not English are required to submit official evidence of English language proficiency. This applies to applicants from Bangladesh, Burma, Nepal, India, Pakistan, Latin America, the Middle East, the People’s Republic of China, Taiwan, Japan, Korea, Southeast Asia, most European countries, and Quebec (Canada). However, applicants who, at the time of application, have already completed at least one year of full-time academic course work with grades of B or better at a
US university may submit an official transcript from the US university to fulfill this requirement. The following courses will not fulfill this requirement:

- courses in English as a Second Language,
- courses conducted in a language other than English,
- courses that will be completed after the application is submitted, and
- courses of a non-academic nature.

If applicants have previously been denied admission to Berkeley on the basis of their English language proficiency, they must submit new test scores that meet the current minimum from one of the standardized tests.

Where to Apply
Visit the Berkeley Graduate Division application page (http://grad.berkeley.edu/admissions/apply).

Admission to the Program
Admission decisions are based on a combination of factors, including academic degrees and records, the statement of purpose, letters of recommendation, test scores, and relevant work experience. The MSE department also considers the appropriateness of your goals to the degree program in which you are interested and to the research interests of the program’s faculty.

To be considered for graduate admissions in MSE you need:

- A bachelor’s degree or recognized equivalent (must be conferred prior to enrollment into our program) from an accredited institution in engineering, physics or chemistry is required. We do not accept students without these types of degrees.
- Sufficient undergraduate training to do graduate work in your chosen field.
- A minimum grade-point average (GPA) of 3.0 (B). International students should be in the top 5% of their class.
- We require three letters of recommendation submitted online.
- A general Graduate Record Exam (GRE) General Test score (85th percentile or higher is desirable) in the Verbal/Analytical/Quantitative sections.

Normative Time Requirements

Normative Time to Advancement

Step I: Pass the preliminary exam—scheduled prior to the start of the second semester. In this oral exam students must demonstrate (i) mastery of the essential components of a Materials Science and Engineering education at a level commensurate with the completion of an undergraduate MSE degree at Berkeley, and (ii) their ability to use this knowledge in ongoing research.

Step II: Complete the minimum number of semester units of formal course work (major and minors) is 28, of which 16 must be in graduate units in the major field.

Step III: Pass the qualifying exam.

Normative Time in Candidacy

Step IV: Submission of the doctoral dissertation.

Total Normative Time

Total normative time is five years.

Time to Advancement Curriculum

Courses Required
Approved study list per student’s research interest but must include course requirements below:

Thermodynamics
MAT SCI 201A Thermodynamics and Phase Transformations in Solids 4

Select one of the following in Structure & Bonding:
MAT SCI 202 Crystal Structure and Bonding
MAT SCI 215 Computational Materials Science

Materials Characterization
MAT SCI 204 Theory of Electron Microscopy and X-Ray Diffraction 2-3

or MAT SCI 241 Electron Microscopy Laboratory

Select one of the following in Material Properties:
MAT SCI 205 Defects in Solids
MAT SCI C212 Deformation and Fracture of Engineering Materials
MAT SCI 213 Environmental Effects on Materials Properties and Behavior
MAT SCI 217 Properties of Dielectric and Magnetic Materials
MAT SCI 223 Semiconductor Materials
MAT SCI 224 Magnetism and Magnetic Materials
MAT SCI C225 Thin-Film Science and Technology
MAT SCI 251 Polymer Surfaces and Interfaces
MAT SCI 260 Surface Properties of Materials

Select one of the following in Materials Processing:
MAT SCI 121 Metals Processing
MAT SCI C216 Macromolecular Science in Biotechnology and Medicine
MAT SCI 223 Semiconductor Materials
MAT SCI 224 Magnetism and Magnetic Materials
MAT SCI C225 Thin-Film Science and Technology
MAT SCI 251 Polymer Surfaces and Interfaces

Teaching Pedagogy:
MAT SCI 375A Science and Engineering Pedagogy 1-2

or MAT SCI 375B Supervised Teaching of Materials Science and Engineering

Preliminary Exams

In this oral exam students must demonstrate:

1. Mastery of the essential components of a Materials Science and Engineering education at a level commensurate with the completion of an undergraduate MSE degree at Berkeley, and
2. Their ability to use this knowledge in ongoing research.

The examination is divided into six topics germane to ceramic, metallic, semiconducting, and soft materials, including their appropriate composites. Six faculty examiners are appointed each semester by the department chair, one examiner per topic, who conduct the exam
in individual oral interviews lasting approximately 20 minutes. The examination topics are:

1. Thermodynamics;
2. Phase Transformations;
3. Bonding, Crystallography, and Crystal Defects;
4. Materials Characterization;
5. Mechanical Properties; and

Qualifying Examination
The PhD qualifying exam tests the student's ability to identify a significant problem, to assemble the background information needed to grasp it in the context of the field, and to construct a technical approach that provides a plausible path to its solution. At the same time the qualifying exam will test the student's knowledge of the subject matter within the broad research field and his or her major field.

The examination consists of two parts, namely, a written proposal, and the oral examination:

1. Written Proposal. The proposal describes intended PhD research. At least two weeks before the examination date the student must submit a written research proposal to his/her committee. The proposal must include a one page abstract and be roughly five to ten pages long. It must contain a concise statement of the research problem and its significance, a discussion of the technical background, the technical approach (experimental and/or theoretical), the anticipated results, and a bibliography. This written proposal is to be prepared by the student without direct collaboration or assistance from the faculty.

2. The Examination. The student should prepare a 30-minute oral presentation of the research proposal(s). The committee will question the student on the material presented orally, the material contained in the written proposal, and on the general technical background to the research area. The student should be familiar with the relevant literature. The student must also defend the significance of the research problem and the viability of the technical approach. The second part of the examination consists of questions in the major and minor fields.

Time in Candidacy
Dissertation
Required Professional Development
Teaching
The faculty of the Department of Materials Science and Engineering considers teaching experience to be an important part of a doctoral student’s program of study and requires that all graduate students pursuing a PhD serve at least one semester as a graduate student instructor (GSI) in an MSE course (usually after the first year).

Seminar
All graduate students are required to enroll (MAT SCI 298-Sect 1) and attend the weekly department colloquium series.

Unit Requirements
There are two plans for the master of science degree.

Plan I requires a minimum of 20 semester units are required, of which at least 8 must be strictly graduate units in the major subject (University requirement), and of these 8, there shall be no more than 2 units of credit for MAT SCI 299 while the remaining units must be graded course units. The remaining 12 units may be upper division or graduate courses proposed by the student and research supervisor and approved by the major field adviser.

Plan II requires a minimum 24 semester units is required, of which at least 12 must be strictly graduate units in the major subject, and of these 12 units, there shall be no more than a total of 2 units of credit MAT SCI 299. The remaining 12 units may be graded upper division or graduate courses approved by the major field adviser.

Electives - for remaining units required (20, Plan I; 24, Plan II) 5-9

Capstone/Thesis (Plan I)
A thesis is required. The research topic and research supervisor must be specified on the program of study form.

The thesis committee is formally appointed by the dean of the Graduate Division upon recommendation of the student's major field adviser and the AAC. It consists of three members: the research supervisor plus one other member from the department, and one member either be from outside the College of Engineering or from a field of engineering not closely related to that of the candidate. The student is encouraged to consult all committee members while the research is in progress.
Capstone/Comprehensive Exam (Plan II)
Students are required to pass a comprehensive examination. This requirement is waived for students who have passed the preliminary examination. For those students who chose not to take the preliminary examination, the major field adviser will appoint a committee of two departmental faculty members to administer the comprehensive examination.

At least a month before the student intends to graduate, a project report based on MAT SCI 299 work or on a phase of his/her work as a research assistant and approved by the project supervisor, must be submitted to the committee. It is the student’s responsibility to see that the final corrected report is submitted and the examination taken by the last day of the semester.

Unit Requirements
Minimum units to complete the degree is 25 semester units (must be in 200 series). Twelve units must be materials science and engineering units; 8 semester units must be in core leadership curriculum units; and 5 semester units in the capstone project units.

Curriculum
These concentrations are suggestions only. Students are encouraged to select electives that best satisfy their specific educational objectives.

General Program Concentration

Technical Electives I
Select one of the following:

- MAT SCI 201A Thermodynamics and Phase Transformations in Solids
- MAT SCI 204 Theory of Electron Microscopy and X-Ray Diffraction
- MAT SCI 215 Computational Materials Science
- MAT SCI 223 Semiconductor Materials
- MAT SCI 224 Magnetism and Magnetic Materials
- MAT SCI C226 Photovoltaic Materials; Modern Technologies in the Context of a Growing Renewable Energy Market
- MAT SCI 251 Polymer Surfaces and Interfaces

Technical Electives II & III
Select two of the following:

- MAT SCI 202 Crystal Structure and Bonding
- MAT SCI 205 Defects in Solids
- MAT SCI C212 Deformation and Fracture of Engineering Materials
- MAT SCI 213 Environmental Effects on Materials Properties and Behavior
- MAT SCI C216 Macromolecular Science in Biotechnology and Medicine
- MAT SCI C225 Thin-Film Science and Technology

Materials for Advanced Structural Materials Concentration

Technical Electives I
Select one of the following:

- MAT SCI 201A Thermodynamics and Phase Transformations in Solids
- MAT SCI 204 Theory of Electron Microscopy and X-Ray Diffraction
- MAT SCI 215 Computational Materials Science

Technical Electives II & III
Select 6-7 units of the following:

- MAT SCI 202 Crystal Structure and Bonding
- MAT SCI 205 Defects in Solids
- MAT SCI C212 Deformation and Fracture of Engineering Materials

Advances in Opto-Electronic Materials Concentration

Technical Electives I
Select one of the following:

- MAT SCI 201A Thermodynamics and Phase Transformations in Solids
- MAT SCI 223 Semiconductor Materials
- MAT SCI 224 Magnetism and Magnetic Materials

Technical Electives II & III
Select 6-7 units of the following:

- MAT SCI 202 Crystal Structure and Bonding
- MAT SCI C225 Thin-Film Science and Technology

Capstone/Master's Project (Plan II)
Your team capstone project analyzes and addresses an industry challenge to integrate the core curriculum with your technical coursework.

Materials for Advanced Energy Systems Concentration

Technical Electives I
Select one of the following:

- MAT SCI 201A Thermodynamics and Phase Transformations in Solids
- MAT SCI 223 Semiconductor Materials
- MAT SCI 224 Magnetism and Magnetic Materials

Technical Electives II & III
Select two of the following:

- MAT SCI 202 Crystal Structure and Bonding
- MAT SCI 205 Defects in Solids
- MAT SCI C212 Deformation and Fracture of Engineering Materials
- MAT SCI 213 Environmental Effects on Materials Properties and Behavior
- MAT SCI C216 Macromolecular Science in Biotechnology and Medicine
- MAT SCI C225 Thin-Film Science and Technology
Materials Science and Engineering

MAT SCI 200A Survey of Materials Science 4 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
A survey of Materials Science at the beginning graduate level, intended for those who did not major in the field as undergraduates. Focus on the nature of microstructure and its manipulation and control to determine engineering properties. Reviews bonding, structure and microstructure, the chemical, electromagnetic and mechanical properties of materials, and introduces the student to microstructural engineering.
Survey of Materials Science: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 4 hours of lecture per week

Additional Details
Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.

MAT SCI 201A Thermodynamics and Phase Transformations in Solids 4 Units
Thermodynamics and Phase Transformations in Solids: Read More [+]

Rules & Requirements
Prerequisites: 102, 103 or equivalent

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.

Instructor: Chrzan

MAT SCI 202 Crystal Structure and Bonding 3 Units
Regular, irregular arrays of points, spheres; lattices, direct, reciprocal; crystallographic point and space groups; atomic structure; bonding in molecules; bonding in solids; ionic (Pauling rules), covalent, metallic bonding; structure of elements, compounds, minerals, polymers.
Crystal Structure and Bonding: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.

Instructor: Chrzan

MAT SCI 204 Theory of Electron Microscopy and X-Ray Diffraction 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
Basic principles of techniques used in the characterization of engineering materials by electron microscopy, diffraction, and spectroscopy; emphasis on detailed analysis of defects responsible for materials properties. Modern electrical, optical and particle beam techniques for characterization of bulk single crystals and their crystalline and amorphous layers. Examples Hall effect, Deep Level Transient Spectroscopy, IR-Spectroscopy.
Theory of Electron Microscopy and X-Ray Diffraction: Read More [+]

Rules & Requirements
Prerequisites: 102, 103 or equivalent

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.

Instructors: Gronsky, Minor

Theory of Electron Microscopy and X-Ray Diffraction: Read Less [-]
MAT SCI 205 Defects in Solids 3 Units
Terms offered: Spring 2014, Spring 2013, Spring 2011
Many properties of solid state materials are determined by lattice defects. This course treats in detail the structure of crystal defects, defect formation and annihilation processes, and the influence of lattice defects on the physical and optical properties of crystalline materials.

Rules & Requirements
Prerequisites: Physics 7C or consent of instructor

MAT SCI C208 Biological Performance of Materials 4 Units
Terms offered: Fall 2017, Fall 2015
This course is intended to give students the opportunity to expand their knowledge of topics related to biomedical materials selection and design. Structure-property relationships of biomedical materials and their interaction with biological systems will be addressed. Applications of the concepts developed include blood-materials compatibility, biomimetic materials, hard and soft tissue-materials interactions, drug delivery, tissue engineering, and biotechnology.

Biological Performance of Materials: Read More [+]

Objectives Outcomes
Course Objectives: The course is separated into four parts spanning the principles of synthetic materials and surfaces, principles of biological materials, biological performance of materials and devices, and state-of-the-art materials design. Students are required to attend class and master the material therein. In addition, readings from the clinical, life and materials science literature are assigned. Students are encouraged to seek out additional reference material to complement the readings assigned. A mid-term examination is given on basic principles (parts 1 and 2 of the outline). A comprehensive final examination is given as well. The purpose of this course is to introduce students to problems associated with the selection and function of biomaterials. Through class lectures and readings in both the physical and life science literature, students will gain broad knowledge of the criteria used to select biomaterials, especially in devices where the material-tissue or material-solution interface dominates performance. Materials used in devices for medicine, dentistry, tissue engineering, drug delivery, and the biotechnology industry will be addressed.

This course also has a significant design component (~35%). Students will form small teams (five or less) and undertake a semester-long design project related to the subject matter of the course. The project includes the preparation of a paper and a 20 minute oral presentation critically analyzing a current material-tissue or material-solution problem. Students will be expected to design improvements to materials and devices to overcome the problems identified in class with existing materials.

Student Learning Outcomes: Work independently and function on a team, and develop solid communication skills (oral, graphic & written) through the class design project.
• Develop an understanding of the social, safety and medical consequences of biomaterial use and regulatory issues associated with the selection of biomaterials in the context of the silicone breast implant controversy and subsequent biomaterials crisis.
• Design experiments and analyze data from the literature in the context of the class design project.
• Understanding of the origin of surface forces and interfacial free energy, and how they contribute to the development of the biomaterial interface and ultimately biomaterial performance.
• Apply math, science & engineering principles to the understanding of soft materials, surface chemistry, DLVO theory, protein adsorption kinetics, viscoelasticity, mass diffusion, and molecular (i.e., drug) delivery kinetics.
• Apply core concepts in materials science to solve engineering problems related to the selection biomaterials, especially in devices where the material-tissue or material-solution interface dominates performance.

Rules & Requirements
Prerequisites: Engineering 45; Chemistry C130/Molecular and Cell Biology C100A or Engineering 115 or equivalent; Bioengineering 102 and 104 recommended
MAT SCI C211 Mechanics of Solids 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
Mechanics of Solids: Read More [+]

Rules & Requirements

Prerequisites: Graduate standing or consent of instructor

Credit Restrictions: Students will receive no credit for 231 after taking 231A or 231B prior to Fall 1992.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Materials Science and Engineering/Graduate

Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.
Instructors: Chrzan, Asta, Ceder, Sherburne

MAT SCI C216 Macromolecular Science in Biotechnology and Medicine 4 Units
Overview of the problems associated with the selection and function of polymers used in biotechnology and medicine. Principles of polymer science, polymer synthesis, and structure-property-performance relationships of polymers. Particular emphasis is placed on the performance of polymers in biological environments. Interactions between macromolecular and biological systems for therapy and diagnosis. Specific applications will include drug delivery, gene therapy, tissue engineering, and surface engineering.
Macromolecular Science in Biotechnology and Medicine: Read More [+]

Rules & Requirements
Prerequisites: Bioengineering 115 or equivalent; open to seniors with consent of instructor

Grading: Letter grade.
Instructor: Healy
Also listed as: BIO ENG C216

MAT SCI 217 Properties of Dielectric and Magnetic Materials 3 Units
Terms offered: Spring 2017
Introduction to the physical principles underlying the dielectric and magnetic properties of solids. Processing-microstructure-property relationships of dielectric materials, including piezoelectric, pyroelectric, and ferroelectric oxides, and of magnetic materials, including hard- and soft ferromagnets, ferrites and magneto-optic and -resistive materials. The course also covers the properties of grain boundary devices (including varistors) as well as ion-conducting and mixed conducting materials for applications in various devices such as sensors, fuel cells, and electric batteries.
Properties of Dielectric and Magnetic Materials: Read More [+]

Rules & Requirements
Prerequisites: Physics 7A-7B-7C (or equivalent); Physics 7A-7B (or equivalent) and consent of instructor; MSE 111 (or equivalent) is recommended

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.
Instructor: Martin

MAT SCI 223 Semiconductor Materials 3 Units

Instructors: Dubon, Wu

Also listed as: BIO ENG C216
MAT SCI 224 Magnetism and Magnetic Materials 3 Units
Terms offered: Fall 2016, Fall 2014, Fall 2013
This course covers the fundamentals of magnetism and magnetic materials in the first two-thirds of the class. Topics include magnetic moments in classical versus quantum mechanical pictures, diamagnetism, paramagnetism, crystal field environments, dipolar and exchange interactions, ferromagnetism, antiferromagnetism, magnetic domains, magnetic anisotropy, and magnetostriction. Magnetic materials covered include transition metals, their alloys and oxides, rare earths and their oxides, organic and molecular magnets. Throughout the course, experimental techniques in magnetic characterization will be discussed. The second part of the course will focus on particular magnetic materials and devices that are of technological interest (e.g., magnetostrictive and magneto-optical materials and devices). Additional topics include biomagnetism and spin glasses. Magnetism and Magnetic Materials: Read More [+]
Rules & Requirements
Prerequisites: 111 or equivalent or consent of instructor; 117 recommended

Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.
Magnetism and Magnetic Materials: Read Less [-]

MAT SCI C225 Thin-Film Science and Technology 3 Units
Thin-film nucleation and growth, microstructural evolution and reactions. Comparison of thin-film deposition techniques. Characterization techniques. Processing of thin films by ion implantation and rapid annealing. Processing-microstructure-property-performance relationships in the context of applications in information storage, ICs, microelectromechanical systems and optoelectronics. Thin-Film Science and Technology: Read More [+]
Rules & Requirements
Prerequisites: Graduate standing in engineering, physics, chemistry, or chemical engineering

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.
Instructors: Wu, Dubon
Also listed as: AST C225
Thin-Film Science and Technology: Read Less [-]

MAT SCI C226 Photovoltaic Materials; Modern Technologies in the Context of a Growing Renewable Energy Market 3 Units
Terms offered: Fall 2015, Spring 2013, Spring 2011
This technical course focuses on the fundamentals of photovoltaic energy conversion with respect to the physical principals of operation and design of efficient semiconductor solar cell devices. This course aims to equip students with the concepts and analytical skills necessary to assess the utility and viability of various modern photovoltaic technologies in the context of a growing global renewable energy market. Photovoltaic Materials; Modern Technologies in the Context of a Growing Renewable Energy Market: Read More [+]
Rules & Requirements
Prerequisites: Material Science and Mineral Engineering 111 or 123 or equivalent. Should have a firm foundation in electronic and optical props of semiconductors and basic semiconductor device physics

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.
Also listed as: ENE,RES C226
Photovoltaic Materials; Modern Technologies in the Context of a Growing Renewable Energy Market: Read Less [-]

MAT SCI 241 Electron Microscopy Laboratory 2 Units
Basic techniques and operations of transmission, and scanning, electron microscopy; x-ray microanalysis, energy loss spectroscopy; specimen preparation, interpretation of data; individual projects in materials science. Electron Microscopy Laboratory: Read More [+]
Rules & Requirements
Prerequisites: 204 (can be taken concurrently)

Hours & Format
Fall and/or spring: 15 weeks - 6 hours of laboratory per week

Additional Details
Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.
Instructors: Gronsky, Minor
Electron Microscopy Laboratory: Read Less [-]
MAT SCI 242 Advanced Characterization Techniques 3 Units
Terms offered: Spring 2017, Spring 2005, Spring 2003
Advanced electrical, optical, magnetic and ion beam characterization techniques including deep level transient spectroscopy, photo-luminescence, electron paramagnetic resonance, and Rutherford backscattering, are used to characterize crystalline materials (with emphasis on semi-conductors).

Rules & Requirements
Prerequisites: 204 or 205 or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 3 hours of laboratory per week

Additional Details
Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.

MAT SCI C250 Nanomaterials in Medicine 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
The course is designed for graduate students interested in the emerging field of nanomedicine. The course will involve lectures, literature reviews and proposal writing. Students will be required to formulate a nanomedicine research project and write an NIH-style proposal during the course. The culmination of this project will involve a mock review panel in which students will serve as peer reviewers to read and evaluate the proposals.

Objectives Outcomes
Course Objectives: To review the current literature regarding the use of nanomaterials in medical applications; (2) To describe approaches to nanomaterial synthesis and surface modification; (3) To understand the interaction of nanomaterials with proteins, cells and biological systems; (4) To familiarize students with proposal writing and scientific peer review.

Student Learning Outcomes: Students should be able to (1) identify the important properties of metal, polymer and ceramic nanomaterials used in healthcare; (2) understand the role of size, shape and surface chemistry of nanomaterials in influencing biological fate and performance; (3) understand common methods employed for surface modification of nanomaterials; (4) comprehend the range of cell-nanomaterial interactions and methods for assaying these interactions; (5) read and critically review the scientific literature relating to nanomedicine; (6) formulate and design an experimental nanomedicine research project; (7) understand the principles of the peer review system.

Rules & Requirements
Prerequisites: Graduate Standing

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.
Instructor: Messersmith
Also listed as: BIO ENG C250

Nanomaterials in Medicine: Read Less [-]
MAT SCI 251 Polymer Surfaces and Interfaces 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
The course is designed for graduate students to gain a fundamental understanding of the surface and interfacial science of polymeric materials. Beginning with a brief introduction of the principles governing polymer phase behavior in bulk, it develops the thermodynamics of polymers in thin films and at interfaces, the characterization techniques to assess polymer behavior in thin films and at interfaces, and the morphologies of polymer thin films and other dimensionally-restricted structures relevant to nanotechnology and biotechnology. Field trips to national user facilities, laboratory demonstrations and hands-on experiments, and guest lectures will augment the courses lectures.

Rules & Requirements
Prerequisites: Chemistry 1A or Engineering 5; Material Science and Engineering 151 recommended

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.
Instructor: Xu

Polymer Surfaces and Interfaces: Read Less [-]

MAT SCI 260 Surface Properties of Materials 3 Units
Terms offered: Spring 2018, Spring 2015, Spring 2013
Thermodynamics of surfaces and phase boundaries, surface tension of solids and liquids, surface activity, adsorption, phase equilibria, and contact angles, electrochemical double layers at interfaces, theory, and applications.

Surface Properties of Materials: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.
Instructor: Salmeron

Formerly known as: Mineral Engineering 260

Surface Properties of Materials: Read Less [-]

MAT SCI C261 Introduction to Nano-Science and Engineering 3 Units
Terms offered: Spring 2015, Spring 2013, Spring 2012
A three-module introduction to the fundamental topics of Nano-Science and Engineering (NSE) theory and research within chemistry, physics, biology, and engineering. This course includes quantum and solid-state physics; chemical synthesis, growth fabrication, and characterization techniques; structures and properties of semiconductors, polymer, and biomedical materials on nanoscales; and devices based on nanostructures. Students must take this course to satisfy the NSE Designated Emphasis core requirement.

Introduction to Nano-Science and Engineering: Read More [+]

Rules & Requirements
Prerequisites: Major in physical science such as chemistry, physics, etc., or engineering; consent of advisor or instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Materials Science and Engineering/Graduate
Grading: Letter grade.
Instructors: Gronsky, S.W. Lee, Wu

Also listed as: BIO ENG C280/NSE C201/PHYSICS C201
Introduction to Nano-Science and Engineering: Read Less [-]
MAT SCI C286 Modeling and Simulation of Advanced Manufacturing Processes 3 Units
This course provides the student with a modern introduction to the basic industrial practices, modeling techniques, theoretical background, and computational methods to treat classical and cutting edge manufacturing processes in a coherent and self-consistent manner.

Objectives Outcomes

Course Objectives: An introduction to modeling and simulation of modern manufacturing processes.

Rules & Requirements

Prerequisites: An undergraduate course in strength of materials or 122

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructor: Zohdi

Also listed as: MEC ENG C201

Modeling and Simulation of Advanced Manufacturing Processes: Read More [+]

MAT SCI C287 Computational Design of Multifunctional/Multiphysical Composite Materials 3 Units
Terms offered: Spring 2012
The course is self-contained and is designed in an interdisciplinary manner for graduate students in engineering, materials science, physics, and applied mathematics who are interested in methods to accelerate the laboratory analysis and design of new materials. Examples draw primarily from various mechanical, thermal, diffusive, and electromagnetic applications.

Objectives Outcomes

Course Objectives: An introduction to modeling and simulation of modern manufacturing processes.

Rules & Requirements

Prerequisites: An undergraduate degree in the applied sciences or engineering

Hours & Format

Fall and/or spring: 15 weeks - 3-3 hours of lecture and 0-1 hours of discussion per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Instructor: Zohdi

Also listed as: MEC ENG C202

Computational Design of Multifunctional/Multiphysical Composite Materials: Read Less [-]

MAT SCI 290A Special Topics in Materials Science 3 Units
Terms offered: Fall 2016, Fall 2015, Fall 2014
Lectures and appropriate assignments on fundamental or applied topics of current interest in materials science and engineering.

Objectives Outcomes

Course Objectives: An introduction to modeling and simulation of modern manufacturing processes.

Rules & Requirements

Prerequisites: Graduate standing

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate

Grading: Letter grade.

Formerly known as: 290M

Special Topics in Materials Science: Read Less [-]
MAT SCI 290M Special Problems in Materials Science 3 Units
Selected topics in the thermodynamic, kinetic or phase transformation behavior of solid materials. Topics will generally be selected based on student interest in Mat Sci 201A-201B. The course provides an opportunity to explore subjects of particular interest in greater depth.

Prerequisites: 201A-201B or consent of instructor

MAT SCI 296A Independent Research for Five-Year BS/MS Program 1 - 2 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
This is the first semester of a two-course sequence for those majors in the five year BS/MS program. Students are expected to formulate, develop and initiate an independent research project under the supervision of a research advisor. This course will meet once at the beginning of the semester to outline the expectations of the course. Periodic meetings covering topics such as data analysis and design of experiment will be scheduled. Students will be expected to keep a laboratory notebook outlining their progress during the semester. A progress report will be due at the end of the semester. Each student will also give a final presentation on his/her research project at the end of the semester.

Prerequisites: Acceptance into the five year BS/MS program

MAT SCI 296B Independent Research for Five-Year BS/MS Program 1 - 2 Units
This is the second semester of a two-course sequence for those majors in the five year BS/MS program. Students are expected to complete an independent research project under the supervision of a research advisor initiated in Materials Science and Engineering 296A. This course will meet once at the beginning of the semester to outline the expectations of the course. Periodic meetings covering topics such as data analysis and design of experiment will be scheduled. Students will be expected to keep a laboratory notebook outlining their progress during the semester. A final report in journal publication form will be due at the end of the semester. Each student will also give a final presentation on his/her research project at the end of the semester.

Prerequisites: 296A

MAT SCI 298 Group Studies, Seminars, or Group Research 1 - 8 Units
Terms offered: Spring 2018, Fall 2017, Spring 2017
Advanced study in various subjects through special seminars on topics to be selected each year, informal group studies of special problems, group participation in comprehensive design problems or group research on complete problems for analysis and experimentation.

Prerequisites: Acceptance into the five year BS/MS program

**MAT SCI 299 Individual Study or Research 1 - 12 Units**

Terms offered: Spring 2018, Fall 2017, Summer 2017 8 Week Session

Individual investigation of advanced materials science problems.

**Rules & Requirements**

**Prerequisites:** Graduate standing in engineering

**Repeat rules:** Course may be repeated for credit.

**Fall and/or spring:** 15 weeks - 1-12 hours of independent study per week

**Summer:**
- 6 weeks - 1-12 hours of independent study per week
- 8 weeks - 1-12 hours of independent study per week

**Additional Details**

**Subject/Course Level:** Materials Science and Engineering/Graduate

**Grading:** Offered for satisfactory/unsatisfactory grade only.

**Individual Study or Research:** Read Less [-]

---

**MAT SCI 375A Science and Engineering Pedagogy 2 Units**

Terms offered: Fall 2016, Fall 2015, Fall 2014

Discussion and research of pedagogical issues. Supervised practice teaching in materials science and engineering.

**Rules & Requirements**

**Prerequisites:** Graduate standing and appointment, or interest in appointment, as a graduate student instructor

**Fall and/or spring:** 15 weeks - 1-2 hours of seminar per week

**Additional Details**

**Subject/Course Level:** Materials Science and Engineering/Professional course for teachers or prospective teachers

**Grading:** Offered for satisfactory/unsatisfactory grade only.

**Formerly known as:** Material Science and Engineering 300

**Science and Engineering Pedagogy:** Read Less [-]

---

**MAT SCI 375B Supervised Teaching of Materials Science and Engineering 1 Unit**

Terms offered: Prior to 2007

Discussion and research of pedagogical issues. Supervised practice teaching in Materials and Science and Engineering.

**Rules & Requirements**

**Prerequisites:** Graduate standing and appointment, or interest in appointment, as a graduate student instructor

**Fall and/or spring:** 15 weeks - 1-2 hours of seminar per week

**Additional Details**

**Subject/Course Level:** Materials Science and Engineering/Professional course for teachers or prospective teachers

---

**MAT SCI 601 Individual Study for Master's Students 1 - 8 Units**

Terms offered: Spring 2018, Fall 2017, Spring 2017

Individual study for the comprehensive or language requirements in consultation with the field adviser.

**Rules & Requirements**

**Prerequisites:** Graduate standing in engineering

**Credit Restrictions:** Course does not satisfy unit or residence requirements for master's degree.

**Repeat rules:** Course may be repeated for credit.

**Fall and/or spring:** 15 weeks - 1-8 hours of independent study per week

**Additional Details**

**Subject/Course Level:** Materials Science and Engineering/Graduate examination preparation

**Grading:** Offered for satisfactory/unsatisfactory grade only.

**Individual Study for Master's Students:** Read Less [-]
MAT SCI 602 Individual Study for Doctoral Students 1 - 8 Units

Terms offered: Spring 2018, Fall 2017, Spring 2017

Individual study in consultation with the major field adviser, intended to provide an opportunity for qualified students to prepare themselves for the various examinations required of candidates for the Ph.D. (and other doctoral degrees).

Rules & Requirements

Prerequisites: Graduate standing in engineering

Credit Restrictions: Course does not satisfy unit or residence requirements for doctoral degree.

Repeat rules: Course may be repeated for credit.

Hours & Format

Fall and/or spring: 15 weeks - 0 hours of independent study per week

Additional Details

Subject/Course Level: Materials Science and Engineering/Graduate examination preparation

Grading: Offered for satisfactory/unsatisfactory grade only.
