

# Mathematics

---

The Department of Mathematics offers both a PhD program in Mathematics and Applied Mathematics.

Students are admitted for specific degree programs: the PhD in Mathematics or PhD in Applied Mathematics. Requirements for the Mathematics and Applied Mathematics PhDs differ only in minor respects, and no distinction is made between the two in day-to-day matters. Graduate students typically take 5-6 years to complete the doctorate.

Continuing students wishing to transfer from one program to another should consult the graduate advisor in 910 Evans Hall. Transfers between the two PhD programs are fairly routine, but must be done prior to taking the qualifying examination. It is a formal policy of the department that an applicant to the PhD program who has previous graduate work in mathematics must present very strong evidence of capability for mathematical research.

Students seeking to transfer to the department's PhD programs from other campus programs, including the Group in Logic and the Methodology of Science, must formally apply and should consult the Vice Chair for Graduate Studies.

## Admission to the University

### Minimum Requirements for Admission

The following minimum requirements apply to all graduate programs and will be verified by the Graduate Division:

1. A bachelor's degree or recognized equivalent from an accredited institution;
2. A grade point average of B or better (3.0);
3. If the applicant has completed a basic degree from a country or political entity (e.g., Quebec) where English is not the official language, adequate proficiency in English to do graduate work, as evidenced by a TOEFL score of at least 90 on the iBT test, 570 on the paper-and-pencil test, or an IELTS Band score of at least 7 on a 9-point scale (note that individual programs may set higher levels for any of these); and
4. Sufficient undergraduate training to do graduate work in the given field.

### Applicants Who Already Hold a Graduate Degree

The Graduate Council views academic degrees not as vocational training certificates, but as evidence of broad training in research methods, independent study, and articulation of learning. Therefore, applicants who already have academic graduate degrees should be able to pursue new subject matter at an advanced level without the need to enroll in a related or similar graduate program.

Programs may consider students for an additional academic master's or professional master's degree only if the additional degree is in a distinctly different field.

Applicants admitted to a doctoral program that requires a master's degree to be earned at Berkeley as a prerequisite (even though the applicant already has a master's degree from another institution in the same or a closely allied field of study) will be permitted to undertake the second master's degree, despite the overlap in field.

The Graduate Division will admit students for a second doctoral degree only if they meet the following guidelines:

1. Applicants with doctoral degrees may be admitted for an additional doctoral degree only if that degree program is in a general area of knowledge distinctly different from the field in which they earned their original degree. For example, a physics PhD could be admitted to a doctoral degree program in music or history; however, a student with a doctoral degree in mathematics would not be permitted to add a PhD in statistics.
2. Applicants who hold the PhD degree may be admitted to a professional doctorate or professional master's degree program if there is no duplication of training involved.

Applicants may apply only to one single degree program or one concurrent degree program per admission cycle.

### Required Documents for Applications

1. **Transcripts:** Applicants may upload *unofficial* transcripts with your application for the departmental initial review. Unofficial transcripts must contain specific information including the name of the applicant, name of the school, all courses, grades, units, & degree conferral (if applicable).
2. **Letters of recommendation:** Applicants may request online letters of recommendation through the online application system. Hard copies of recommendation letters must be sent directly to the program, by the recommender, not the Graduate Admissions.
3. **Evidence of English language proficiency:** All applicants who have completed a basic degree from a country or political entity in which the official language is not English are required to submit official evidence of English language proficiency. This applies to institutions from Bangladesh, Burma, Nepal, India, Pakistan, Latin America, the Middle East, the People's Republic of China, Taiwan, Japan, Korea, Southeast Asia, most European countries, and Quebec (Canada). However, applicants who, at the time of application, have already completed at least one year of full-time academic course work with grades of B or better at a US university may submit an official transcript from the US university to fulfill this requirement. The following courses will not fulfill this requirement:
  - courses in English as a Second Language,
  - courses conducted in a language other than English,
  - courses that will be completed after the application is submitted, and
  - courses of a non-academic nature.

Applicants who have previously applied to Berkeley must also submit new test scores that meet the current minimum requirement from one of the standardized tests. Official TOEFL score reports must be sent directly from Educational Test Services (ETS). The institution code for Berkeley is 4833 for Graduate Organizations. Official IELTS score reports must be sent electronically from the testing center to University of California, Berkeley, Graduate Division, Sproul Hall, Rm 318 MC 5900, Berkeley, CA 94720. TOEFL and IELTS score reports are only valid for two years prior to beginning the graduate program at UC Berkeley. Note: score reports can not expire before the month of June.

## Where to Apply

Visit the Berkeley Graduate Division application page (<http://grad.berkeley.edu/admissions/apply/>).

## Admission to the Program

Undergraduate students also often take one or more of the following introductory Mathematics graduate courses:

MATH 202A	Introduction to Topology and Analysis	4
MATH 202B	Introduction to Topology and Analysis	4
MATH 214	Differential Topology	4
MATH 225A	Metamathematics	4
MATH 225B	Metamathematics	4
MATH 228A	Numerical Solution of Differential Equations	4
MATH 228B	Numerical Solution of Differential Equations	4
MATH 250A	Groups, Rings, and Fields	4
MATH 250B	Commutative Algebra	4

The Math Department admits new graduate students to the fall semester only. The Graduate Division's Online Application will be available in early September at: <http://grad.berkeley.edu/admissions/index.shtml> (<http://grad.berkeley.edu/admissions/index.shtml>). Please read the information on Graduate Division requirements and information required to complete the application.

Copies of official or unofficial transcripts may be uploaded to your application. Please do **not** mail original transcripts for the review process.

We require three letters of recommendation, which should be submitted online. Please do **not** mail letters of recommendation for the review process.

For more information, please review the department's graduate admissions webpage at: <https://math.berkeley.edu/programs/graduate/admissions/> (<https://math.berkeley.edu/programs/graduate/admissions/>). We also recommend reviewing our admissions FAQs page at: <https://math.berkeley.edu/programs/graduate/faqs/> (<https://math.berkeley.edu/programs/graduate/faqs/>).

## Curriculum

### Prerequisites

The Department of Mathematics offers two PhD degrees, one in Mathematics and one in Applied Mathematics. Applicants for admission to either PhD program are expected to have preparation comparable to the undergraduate major at Berkeley in Mathematics or in Applied Mathematics. These majors consist of two full years of lower division work (covering calculus, linear algebra, differential equations, and multivariable calculus), followed by eight one-semester courses including real analysis, complex analysis, abstract algebra, and linear algebra. These eight courses may include some mathematically based courses in other departments, like physics, engineering, computer science, or economics.

Applicants for admission are considered by the department's Graduate Admissions and M.O.C. Committees. The number of students that can be admitted each year is determined by the Graduate Division and by departmental resources. In making admissions decisions, the committee conducts a comprehensive review of applicants considering broader community impacts, academic performance in mathematics courses,

level of mathematical preparation, letters of recommendation, and GRE scores.

### Degree Requirements

In outline, to qualify for the PhD in either Mathematics or Applied Mathematics, the candidate must meet the following requirements.

- During the first year in the PhD program:
  - take at least four courses, two or more of which are graduate courses in mathematics;
  - and pass the six-hour written preliminary examination covering primarily undergraduate material. (The exam is given just before the beginning of each semester, and the student must pass it within their first three semesters.)
- Pass a three-hour, oral qualifying examination emphasizing, but not exclusively restricted to, the area of specialization. The qualifying examination must be attempted *within two years* of entering the program.
- Complete a seminar offered by the Math department, giving a talk of at least one hour duration. Research presentations held at Mathematical Sciences Research Institute (MSRI), or Lawrence Berkeley National Lab (LBNL) are also acceptable. A Math Department faculty member must be present at the talk and sign the seminar form confirming.
- Write a dissertation embodying the results of original research and acceptable to a properly constituted dissertation committee.
- Meet the University residence requirement of two years or four semesters.

The detailed regulations of the PhD program are as follows:

### Course Requirements

Students must take and pass at least four 4-unit courses during the first year of the Ph.D. program; at least two courses per semester. At minimum, two of these courses must be graduate courses (200-level) offered by the Department of Mathematics. Two upper division (100-level) undergraduate courses offered by the Department of Mathematics may also be used toward this requirement. Exceptions may also be considered and must be reviewed by the Head Graduate Advisor for approval.

### Preliminary Examination

The preliminary examination consists of six hours of written work given over a two-day period. Most of the examination covers material, mainly in analysis and algebra, and helps to identify gaps in preparation. The preliminary examination is offered twice a year—during the week before classes start in both the fall and spring semesters. A student may repeat the examination twice. A student who does not pass the preliminary examination within 13 months of the date of entry into the PhD program will not be permitted to remain in the program past the third semester. In exceptional cases, a fourth try may be granted upon appeal to committee omega.

### Qualifying Examination

To arrange for the qualifying examination, a student must first settle on an area of concentration, and a prospective dissertation supervisor, someone who agrees to supervise the dissertation if the examination is passed. With the aid of the prospective supervisor, the student forms an examination committee of four members. Committee members must be members of Berkeley's Academic Senate and the Chair must be a faculty member in the Mathematics Department. The syllabus of the examination is to be worked out jointly by the committee and the student,

but before final approval it is to be circulated to all faculty members of the appropriate sections. The qualifying examination must cover material falling in at least three subject areas and these must be listed on the application to take the examination. Moreover, the material covered must fall within more than one section of the department. Sample syllabi can be seen on the Qualifying Examination page (<https://math.berkeley.edu/programs/graduate/qualifying-examination/>) on the department website.

The student must attempt the qualifying examination within twenty-five months of entering the PhD program. If a student does not pass on the first attempt, then, on the recommendation of the student's examining committee, and subject to the approval of the Graduate Division, the student may repeat the examination once. The examining committee must be the same, and the re-examination must be held within thirty months of the student's entrance into the PhD program.

For a student to pass the qualifying examination, at least one identified member of the subject area group must be willing to accept the candidate as a dissertation student, if asked. The student must obtain an official dissertation supervisor within one semester after passing the qualifying examination or leave the PhD program. For more detailed rules and advice concerning the qualifying examination, consult the graduate advisor in 910 Evans Hall.

## Eligibility

At this time, the MA in Mathematics is a simultaneous degree program only offered to students currently enrolled in a doctoral program at UC Berkeley. The doctoral student must be in good standing in their program and have a faculty adviser in the Mathematics Department who is supportive of the addition of the MA in Mathematics and agrees to supervise the MA work. Current doctoral students must apply during the regular admissions cycle for consideration for fall admission. The degree must be completed prior to or in tandem with the PhD degree. Interested students must inquire with the Mathematics Graduate Student Affairs Officer.

## Unit Requirements

**Plan I** requires at least 20 semester units of upper division and graduate courses and a thesis. At least 8 of these units must be in graduate courses (200 series). These 8 units are normally taken in the Department of Mathematics at Berkeley. In special cases, upon recommendation of the Graduate Adviser and approval of the Dean of the Graduate Division, some of the 8 graduate units may be taken in other departments.

**Plan II** requires at least 24 semester units of upper division and graduate courses, followed by a comprehensive final examination, the MA examination. At least 12 of these units must be in graduate courses (200 series). These 12 units are normally taken in the Department of Mathematics at Berkeley. In special cases, upon recommendation of the graduate advisor and approval of the dean of the Graduate Division, some of the 12 graduate units may be taken in other departments. All courses fulfilling the above unit requirements must have significant mathematical content. In general, MA students are encouraged to take some courses outside the Department of Mathematics. In many jobs, at least some acquaintance with statistics and computer science is essential; and, for some students, courses in such fields as engineering, biological or physical sciences, or economics are highly desirable.

A breadth requirement consisting of at least one course in each of three fields must be met by all students. Fields include algebra, analysis, geometry, foundations, history of mathematics, numerical analysis, probability and statistics, computer science, and various other fields

of applied mathematics. The last category specifically covers courses in a variety of departments, and the graduate adviser may allow more than one such course to count toward the breadth requirement. A depth requirement consisting of a coherent program of three courses all in one of the above fields, at least two of these courses being at the graduate level, must be met. Students interested in a field of applied mathematics are encouraged to take some of these courses outside the department.

## Curriculum

### Courses Required

#### Breadth Requirement:

Select one course in three fields from the following:

algebra; analysis, geometry, foundations, history of mathematics, numerical analysis, probability and statistics, computer science, applied mathematics

#### Depth Requirement:

Select a coherent program of three courses all in one field from the following:

algebra; analysis, geometry, foundations, history of mathematics, numerical analysis, probability and statistics, computer science, applied mathematics

- Advancement to Candidacy
- Capstone/Thesis (Plan I)
- Capstone/Comprehensive Exam (Plan II)
- Capstone/Master's Project (Plan II)

### MATH 202A Introduction to Topology and Analysis 4 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020

Metric spaces and general topological spaces. Compactness and connectedness. Characterization of compact metric spaces. Theorems of Tychonoff, Urysohn, Tietze. Complete spaces and the Baire category theorem. Function spaces; Arzela-Ascoli and Stone-Weierstrass theorems. Partitions of unity. Locally compact spaces; one-point compactification. Introduction to measure and integration. Sigma algebras of sets. Measures and outer measures. Lebesgue measure on the line and  $\mathbb{R}^n$ . Construction of the integral. Dominated convergence theorem.

Introduction to Topology and Analysis: Read More [+]

#### Rules & Requirements

**Prerequisites:** 104

#### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

#### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Introduction to Topology and Analysis: Read Less [-]

## MATH 202B Introduction to Topology and Analysis 4 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020  
 Measure and integration. Product measures and Fubini-type theorems. Signed measures; Hahn and Jordan decompositions. Radon-Nikodym theorem. Integration on the line and in  $\mathbb{R}^n$ . Differentiation of the integral. Hausdorff measures. Fourier transform. Introduction to linear topological spaces, Banach spaces and Hilbert spaces. Banach-Steinhaus theorem; closed graph theorem. Hahn-Banach theorem. Duality; the dual of LP. Measures on locally compact spaces; the dual of  $C(X)$ . Weak and weak-\* topologies; Banach-Alaoglu theorem. Convexity and the Krein-Milman theorem. Additional topics chosen may include compact operators, spectral theory of compact operators, and applications to integral equations.

Introduction to Topology and Analysis: Read More [ + ]

### Rules & Requirements

**Prerequisites:** 202A and 110

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Introduction to Topology and Analysis: Read Less [ - ]

## MATH 204 Ordinary Differential Equations 4 Units

Terms offered: Fall 2022, Fall 2016, Spring 2016  
 Rigorous theory of ordinary differential equations. Fundamental existence theorems for initial and boundary value problems, variational equilibria, periodic coefficients and Floquet Theory, Green's functions, eigenvalue problems, Sturm-Liouville theory, phase plane analysis, Poincare-Bendixon Theorem, bifurcation, chaos.

Ordinary Differential Equations: Read More [ + ]

### Rules & Requirements

**Prerequisites:** 104

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Ordinary Differential Equations: Read Less [ - ]

## MATH 205 Theory of Functions of a Complex Variable 4 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020  
 Normal families. Riemann Mapping Theorem. Picard's theorem and related theorems. Multiple-valued analytic functions and Riemann surfaces. Further topics selected by the instructor may include: harmonic functions, elliptic and algebraic functions, boundary behavior of analytic functions and HP spaces, the Riemann zeta functions, prime number theorem.

Theory of Functions of a Complex Variable: Read More [ + ]

### Rules & Requirements

**Prerequisites:** 185

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Theory of Functions of a Complex Variable: Read Less [ - ]

## MATH 206 Functional Analysis 4 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020  
 Spectrum of an operator. Analytic functional calculus. Compact operators. Hilbert-Schmidt operators. Spectral theorem for bounded self-adjoint and normal operators. Unbounded self-adjoint operators. Banach algebras. Commutative Gelfand-Naimark theorem. Selected additional topics such as Fredholm operators and Fredholm index, Calkin algebra, Toeplitz operators, semigroups of operators, interpolation spaces, group algebras. Functional Analysis: Read More [ + ]

### Rules & Requirements

**Prerequisites:** 202A-202B

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

**Grading:** Letter grade.

Functional Analysis: Read Less [ - ]

## MATH 208 C\*-algebras 4 Units

Terms offered: Spring 2022, Spring 2021, Fall 2019

Basic theory of C\*-algebras. Positivity, spectrum, GNS construction.

Group C\*-algebras and connection with group representations. Additional topics, for example, C\*-dynamical systems, K-theory.

C\*-algebras: Read More [+]

### Rules & Requirements

**Prerequisites:** 206

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

C\*-algebras: Read Less [-]

## MATH 209 Von Neumann Algebras 4 Units

Terms offered: Spring 2017, Spring 2014, Spring 2012

Basic theory of von Neumann algebras. Density theorems, topologies and normal maps, traces, comparison of projections, type classification, examples of factors. Additional topics, for example, Tomita Takasaki theory, subfactors, group actions, and noncommutative probability.

Von Neumann Algebras: Read More [+]

### Rules & Requirements

**Prerequisites:** 206

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Von Neumann Algebras: Read Less [-]

## MATH 212 Several Complex Variables 4 Units

Terms offered: Fall 2021, Fall 2019, Spring 2016

Power series developments, domains of holomorphy, Hartogs' phenomenon, pseudo convexity and plurisubharmonicity. The remainder of the course may treat either sheaf cohomology and Stein manifolds, or the theory of analytic subvarieties and spaces.

Several Complex Variables: Read More [+]

### Rules & Requirements

**Prerequisites:** 185 and 202A-202B or their equivalents

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Several Complex Variables: Read Less [-]

## MATH 214 Differential Topology 4 Units

Terms offered: Fall 2022, Spring 2022, Spring 2021

This is an introduction to abstract differential topology based on rigorous mathematical proofs. The topics include Smooth manifolds and maps, tangent and normal bundles. Sard's theorem and transversality, Whitney embedding theorem. differential forms, Stokes' theorem, Frobenius theorem. Basic degree theory. Flows, Lie derivative, Lie groups and algebras. Additional topics selected by instructor.

Differential Topology: Read More [+]

### Rules & Requirements

**Prerequisites:** 202A

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Metamathematics: Read Less [-]

## MATH 225B Metamathematics 4 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020  
 Metamathematics of predicate logic. Completeness and compactness theorems. Interpolation theorem, definability, theory of models. Metamathematics of number theory, recursive functions, applications to truth and provability. Undecidable theories. Sequence begins fall.  
 Metamathematics: Read More [+]

### Rules & Requirements

**Prerequisites:** 125A and (135 or 136)

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Metamathematics: Read Less [-]

## MATH 227A Theory of Recursive Functions 4 Units

Terms offered: Spring 2021, Fall 2015, Fall 2013  
 Recursive and recursively enumerable sets of natural numbers; characterizations, significance, and classification. Relativization, degrees of unsolvability. The recursion theorem. Constructive ordinals, the hyperarithmetical and analytical hierarchies. Recursive objects of higher type. Sequence begins fall.  
 Theory of Recursive Functions: Read More [+]

### Rules & Requirements

**Prerequisites:** Mathematics 225B

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

**Instructor:** 225C.

Theory of Recursive Functions: Read Less [-]

## MATH 228A Numerical Solution of Differential Equations 4 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020

Ordinary differential equations: Runge-Kutta and predictor-corrector methods; stability theory, Richardson extrapolation, stiff equations, boundary value problems. Partial differential equations: stability, accuracy and convergence, Von Neumann and CFL conditions, finite difference solutions of hyperbolic and parabolic equations. Finite differences and finite element solution of elliptic equations.

Numerical Solution of Differential Equations: Read More [+]

### Rules & Requirements

**Prerequisites:** 128A

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

**Instructor:** 128A-128B.

Numerical Solution of Differential Equations: Read Less [-]

## MATH 228B Numerical Solution of Differential Equations 4 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020

Ordinary differential equations: Runge-Kutta and predictor-corrector methods; stability theory, Richardson extrapolation, stiff equations, boundary value problems. Partial differential equations: stability, accuracy and convergence, Von Neumann and CFL conditions, finite difference solutions of hyperbolic and parabolic equations. Finite differences and finite element solution of elliptic equations.

Numerical Solution of Differential Equations: Read More [+]

### Rules & Requirements

**Prerequisites:** 128A

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

**Instructor:** 128A-128B.

Numerical Solution of Differential Equations: Read Less [-]

## MATH 229 Theory of Models 4 Units

Terms offered: Spring 2019, Spring 2015, Spring 2013

Syntactical characterization of classes closed under algebraic operations. Ultraproducts and ultralimits, saturated models. Methods for establishing decidability and completeness. Model theory of various languages richer than first-order.

Theory of Models: Read More [+]

### Rules & Requirements

**Prerequisites:** 225B

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Theory of Models: Read Less [-]

## MATH 235A Theory of Sets 4 Units

Terms offered: Fall 2018, Spring 2014, Fall 2011

Axiomatic foundations. Operations on sets and relations. Images and set functions. Ordering, well-ordering, and well-founded relations; general principles of induction and recursion. Ranks of sets, ordinals and their arithmetic. Set-theoretical equivalence, similarity of relations; definitions by abstraction. Arithmetic of cardinals. Axiom of choice, equivalent forms, and consequences. Sequence begins fall.

Theory of Sets: Read More [+]

### Rules & Requirements

**Prerequisites:** 125A and 135

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

**Instructor:** 125A and 135.

Theory of Sets: Read Less [-]

## MATH 236 Metamathematics of Set Theory 4 Units

Terms offered: Fall 2021, Fall 2014, Fall 2010

Various set theories: comparison of strength, transitive, and natural models, finite axiomatizability. Independence and consistency of axiom of choice, continuum hypothesis, etc. The measure problem and axioms of strong infinity.

Metamathematics of Set Theory: [Read More](#) [+]

### Rules & Requirements

**Prerequisites:** 225B and 235A

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Metamathematics of Set Theory: [Read Less](#) [-]

## MATH 239 Discrete Mathematics for the Life Sciences 4 Units

Terms offered: Spring 2011, Fall 2008, Spring 2008

Introduction to algebraic statistics and probability, optimization, phylogenetic combinatorics, graphs and networks, polyhedral and metric geometry.

Discrete Mathematics for the Life Sciences: [Read More](#) [+]

### Rules & Requirements

**Prerequisites:** Statistics 134 or equivalent introductory probability theory course, or consent of instructor

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Discrete Mathematics for the Life Sciences: [Read Less](#) [-]

## MATH C239 Discrete Mathematics for the Life Sciences 4 Units

Terms offered: Spring 2013

Introduction to algebraic statistics and probability, optimization, phylogenetic combinatorics, graphs and networks, polyhedral and metric geometry.

Discrete Mathematics for the Life Sciences: [Read More](#) [+]

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

**Also listed as:** MCELLBI C244

Discrete Mathematics for the Life Sciences: [Read Less](#) [-]

## MATH 240 Riemannian Geometry 4 Units

Terms offered: Fall 2022, Fall 2021, Fall 2019

Riemannian metric and Levi-Civita connection, geodesics and completeness, curvature, first and second variations of arc length. Additional topics such as the theorems of Myers, Synge, and Cartan-Hadamard, the second fundamental form, convexity and rigidity of hypersurfaces in Euclidean space, homogeneous manifolds, the Gauss-Bonnet theorem, and characteristic classes.

Riemannian Geometry: [Read More](#) [+]

### Rules & Requirements

**Prerequisites:** 214

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Riemannian Geometry: [Read Less](#) [-]

## MATH 241 Complex Manifolds 4 Units

Terms offered: Spring 2021, Spring 2020, Fall 2017

Riemann surfaces, divisors and line bundles on Riemann surfaces, sheaves and the Dolbeault theorem on Riemann surfaces, the classical Riemann-Roch theorem, theorem of Abel-Jacobi. Complex manifolds, Kahler metrics. Summary of Hodge theory, groups of line bundles, additional topics such as Kodaira's vanishing theorem, Lefschetz hyperplane theorem.

Complex Manifolds: [Read More](#) [+]

### Rules & Requirements

**Prerequisites:** 214 and 215A

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Complex Manifolds: [Read Less](#) [-]

## MATH 242 Symplectic Geometry 4 Units

Terms offered: Fall 2021, Fall 2020, Spring 2019

Basic topics: symplectic linear algebra, symplectic manifolds, Darboux theorem, cotangent bundles, variational problems and Legendre transform, hamiltonian systems, Lagrangian submanifolds, Poisson brackets, symmetry groups and momentum mappings, coadjoint orbits, Kahler manifolds.

Symplectic Geometry: [Read More](#) [+]

### Rules & Requirements

**Prerequisites:** 214

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Symplectic Geometry: [Read Less](#) [-]

## MATH C243 Seq: Methods and Applications 3 Units

Terms offered: Spring 2015, Spring 2014

A graduate seminar class in which a group of students will closely examine recent computational methods in high-throughput sequencing followed by directly examining interesting biological applications thereof.

Seq: Methods and Applications: [Read More](#) [+]

### Rules & Requirements

**Prerequisites:** Graduate standing in Math, MCB, and Computational Biology; or consent of the instructor

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

**Instructor:** Pachter

**Also listed as:** MCELLBI C243

Seq: Methods and Applications: [Read Less](#) [-]

## MATH 245A General Theory of Algebraic Structures 4 Units

Terms offered: Fall 2017, Fall 2015, Spring 2014

Structures defined by operations and/or relations, and their homomorphisms. Classes of structures determined by identities. Constructions such as free objects, objects presented by generators and relations, ultraproducts, direct limits. Applications of general results to groups, rings, lattices, etc. Course may emphasize study of congruence- and subalgebra-lattices, or category-theory and adjoint functors, or other aspects.

General Theory of Algebraic Structures: [Read More](#) [+]

### Rules & Requirements

**Prerequisites:** Math 113

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

General Theory of Algebraic Structures: [Read Less](#) [-]

## MATH 249 Algebraic Combinatorics 4 Units

Terms offered: Spring 2021, Spring 2020, Fall 2019

(I) Enumeration, generating functions and exponential structures, (II) Posets and lattices, (III) Geometric combinatorics, (IV) Symmetric functions, Young tableaux, and connections with representation theory. Further study of applications of the core material and/or additional topics, chosen by instructor.

Algebraic Combinatorics: Read More [+]

### Rules & Requirements

**Prerequisites:** 250A or consent of instructor

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Algebraic Combinatorics: Read Less [-]

## MATH 250A Groups, Rings, and Fields 4 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020

Group theory, including the Jordan-Holder theorem and the Sylow theorems. Basic theory of rings and their ideals. Unique factorization domains and principal ideal domains. Modules. Chain conditions. Fields, including fundamental theorem of Galois theory, theory of finite fields, and transcendence degree.

Groups, Rings, and Fields: Read More [+]

### Rules & Requirements

**Prerequisites:** 114 or consent of instructor

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Groups, Rings, and Fields: Read Less [-]

## MATH 250B Commutative Algebra 4 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020

Development of the main tools of commutative and homological algebra applicable to algebraic geometry, number theory and combinatorics.

Commutative Algebra: Read More [+]

### Rules & Requirements

**Prerequisites:** 250A

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Commutative Algebra: Read Less [-]

## MATH 251 Ring Theory 4 Units

Terms offered: Fall 2021, Fall 2016, Spring 2013

Topics such as: Noetherian rings, rings with descending chain condition, theory of the radical, homological methods.

Ring Theory: Read More [+]

### Rules & Requirements

**Prerequisites:** 250A

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Ring Theory: Read Less [-]

## MATH 252 Representation Theory 4 Units

Terms offered: Fall 2021, Fall 2020, Fall 2015

Structure of finite dimensional algebras, applications to representations of finite groups, the classical linear groups.

Representation Theory: Read More [+]

### Rules & Requirements

**Prerequisites:** 250A

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Representation Theory: Read Less [-]

## MATH 253 Homological Algebra 4 Units

Terms offered: Fall 2016, Fall 2014, Summer 2014 10 Week Session  
 Modules over a ring, homomorphisms and tensor products of modules, functors and derived functors, homological dimension of rings and modules.

Homological Algebra: Read More [+]

### Rules & Requirements

**Prerequisites:** 250A

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Homological Algebra: Read Less [-]

## MATH 254A Number Theory 4 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020  
 Valuations, units, and ideals in number fields, ramification theory, quadratic and cyclotomic fields, topics from class field theory, zeta-functions and L-series, distribution of primes, modular forms, quadratic forms, diophantine equations, P-adic analysis, and transcendental numbers. Sequence begins fall.

Number Theory: Read More [+]

### Rules & Requirements

**Prerequisites:** 250A for 254A; 254A for 254B

**Repeat rules:** Course may be repeated for credit with instructor consent.

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

**Instructor:** 250A.

Number Theory: Read Less [-]

## MATH 254B Number Theory 4 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020  
 Valuations, units, and ideals in number fields, ramification theory, quadratic and cyclotomic fields, topics from class field theory, zeta-functions and L-series, distribution of primes, modular forms, quadratic forms, diophantine equations, P-adic analysis, and transcendental numbers. Sequence begins fall.

Number Theory: Read More [+]

### Rules & Requirements

**Prerequisites:** 254A

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

**Instructor:** 250A.

Number Theory: Read Less [-]

## MATH 255 Algebraic Curves 4 Units

Terms offered: Fall 2022, Spring 2019, Fall 2014  
 Elliptic curves. Algebraic curves, Riemann surfaces, and function fields. Singularities. Riemann-Roch theorem, Hurwitz's theorem, projective embeddings and the canonical curve. Zeta functions of curves over finite fields. Additional topics such as Jacobians or the Riemann hypothesis.

Algebraic Curves: Read More [+]

### Rules & Requirements

**Prerequisites:** 250A-250B or consent of instructor

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Algebraic Curves: Read Less [-]

## MATH 256A Algebraic Geometry 4 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020

Affine and projective algebraic varieties. Theory of schemes and morphisms of schemes. Smoothness and differentials in algebraic geometry. Coherent sheaves and their cohomology. Riemann-Roch theorem and selected applications. Sequence begins fall.

Algebraic Geometry: Read More [+]

### Rules & Requirements

**Prerequisites:** 250A-250B for 256A; 256A for 256B

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

**Instructor:** 250A.

Algebraic Geometry: Read Less [-]

## MATH 256B Algebraic Geometry 4 Units

Terms offered: Spring 2022, Spring 2021, Spring 2020

Affine and projective algebraic varieties. Theory of schemes and morphisms of schemes. Smoothness and differentials in algebraic geometry. Coherent sheaves and their cohomology. Riemann-Roch theorem and selected applications. Sequence begins fall.

Algebraic Geometry: Read More [+]

### Rules & Requirements

**Prerequisites:** 256A

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

**Instructor:** 250A.

Algebraic Geometry: Read Less [-]

## MATH 257 Group Theory 4 Units

Terms offered: Spring 2021, Spring 2018, Spring 2014

Topics such as: generators and relations, infinite discrete groups, groups of Lie type, permutation groups, character theory, solvable groups, simple groups, transfer and cohomological methods.

Group Theory: Read More [+]

### Rules & Requirements

**Prerequisites:** 250A

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Group Theory: Read Less [-]

## MATH 258 Harmonic Analysis 4 Units

Terms offered: Fall 2021, Fall 2020, Fall 2018

Basic properties of Fourier series, convergence and summability, conjugate functions, Hardy spaces, boundary behavior of analytic and harmonic functions. Additional topics at the discretion of the instructor.

Harmonic Analysis: Read More [+]

### Rules & Requirements

**Prerequisites:** 206 or a basic knowledge of real, complex, and linear analysis

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Harmonic Analysis: Read Less [-]

## MATH 261A Lie Groups 4 Units

Terms offered: Fall 2022, Fall 2021, Spring 2021

Lie groups and Lie algebras, fundamental theorems of Lie, general structure theory; compact, nilpotent, solvable, semi-simple Lie groups; classification theory and representation theory of semi-simple Lie algebras and Lie groups, further topics such as symmetric spaces, Lie transformation groups, etc., if time permits. In view of its simplicity and its wide range of applications, it is preferable to cover compact Lie groups and their representations in 261A. Sequence begins Fall.

Lie Groups: Read More [+]

### Rules & Requirements

**Prerequisites:** 214

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

**Instructor:** 214.

Lie Groups: Read Less [-]

## MATH 261B Lie Groups 4 Units

Terms offered: Spring 2022, Fall 2020, Fall 2017

Lie groups and Lie algebras, fundamental theorems of Lie, general structure theory; compact, nilpotent, solvable, semi-simple Lie groups; classification theory and representation theory of semi-simple Lie algebras and Lie groups, further topics such as symmetric spaces, Lie transformation groups, etc., if time permits. In view of its simplicity and its wide range of applications, it is preferable to cover compact Lie groups and their representations in 261A. Sequence begins Fall.

Lie Groups: Read More [+]

### Rules & Requirements

**Prerequisites:** 214

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

**Instructor:** 214.

Lie Groups: Read Less [-]

## MATH 270 Advanced Topics Course in Mathematics 2 Units

Terms offered: Spring 2022, Spring 2019, Spring 2018

This course will give introductions to research-related topics in mathematics. The topics will vary from semester to semester.

Advanced Topics Course in Mathematics: Read More [+]

### Rules & Requirements

**Repeat rules:** Course may be repeated for credit when topic changes.

### Hours & Format

**Fall and/or spring:** 15 weeks - 1.5 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Offered for satisfactory/unsatisfactory grade only.

Advanced Topics Course in Mathematics: Read Less [-]

## MATH 272 Interdisciplinary Topics in Mathematics 1 - 4 Units

Terms offered: Spring 2019

Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Interdisciplinary Topics in Mathematics: Read More [+]

### Rules & Requirements

**Prerequisites:** Consent of instructor

**Repeat rules:** Course may be repeated for credit without restriction.

### Hours & Format

**Fall and/or spring:** 15 weeks - 3-3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Interdisciplinary Topics in Mathematics: Read Less [-]

## MATH 273 Topics in Numerical Analysis 4 Units

Terms offered: Spring 2022, Spring 2016, Spring 2014  
Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Topics in Numerical Analysis: [Read More](#) [+]

### Rules & Requirements

**Prerequisites:** Consent of instructor

**Repeat rules:** Course may be repeated for credit without restriction.

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Topics in Numerical Analysis: [Read Less](#) [-]

## MATH 274 Topics in Algebra 4 Units

Terms offered: Fall 2022, Spring 2021, Spring 2020  
Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Topics in Algebra: [Read More](#) [+]

### Rules & Requirements

**Prerequisites:** Consent of instructor

**Repeat rules:** Course may be repeated for credit without restriction.

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Topics in Algebra: [Read Less](#) [-]

## MATH 275 Topics in Applied Mathematics 4 Units

Terms offered: Fall 2021, Fall 2018, Spring 2017  
Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Topics in Applied Mathematics: [Read More](#) [+]

### Rules & Requirements

**Prerequisites:** Consent of instructor

**Repeat rules:** Course may be repeated for credit without restriction.

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Topics in Applied Mathematics: [Read Less](#) [-]

## MATH 276 Topics in Topology 4 Units

Terms offered: Spring 2021, Fall 2017, Spring 2016  
Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Topics in Topology: [Read More](#) [+]

### Rules & Requirements

**Prerequisites:** Consent of instructor

**Repeat rules:** Course may be repeated for credit without restriction.

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Topics in Topology: [Read Less](#) [-]

## MATH 277 Topics in Differential Geometry 4 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020

Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Topics in Differential Geometry: [Read More](#) [+]

### Rules & Requirements

**Prerequisites:** Consent of instructor

**Repeat rules:** Course may be repeated for credit without restriction.

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Topics in Differential Geometry: [Read Less](#) [-]

## MATH 278 Topics in Analysis 4 Units

Terms offered: Fall 2021, Spring 2021, Spring 2020

Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Topics in Analysis: [Read More](#) [+]

### Rules & Requirements

**Prerequisites:** Consent of instructor

**Repeat rules:** Course may be repeated for credit without restriction.

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Topics in Analysis: [Read Less](#) [-]

## MATH 279 Topics in Partial Differential Equations 4 Units

Terms offered: Fall 2022, Spring 2022, Fall 2021

Advanced topics chosen by the instructor. The content of this course changes, as in the case of seminars.

Topics in Partial Differential Equations: [Read More](#) [+]

### Rules & Requirements

**Prerequisites:** Consent of instructor

**Repeat rules:** Course may be repeated for credit without restriction.

### Hours & Format

**Fall and/or spring:** 15 weeks - 3 hours of lecture per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Topics in Partial Differential Equations: [Read Less](#) [-]

## MATH 290 Seminars 1 - 6 Units

Terms offered: Spring 2017, Spring 2015, Fall 2014

Topics in foundations of mathematics, theory of numbers, numerical calculations, analysis, geometry, topology, algebra, and their applications, by means of lectures and informal conferences; work based largely on original memoirs.

Seminars: [Read More](#) [+]

### Rules & Requirements

**Repeat rules:** Course may be repeated for credit without restriction.

### Hours & Format

**Fall and/or spring:** 15 weeks - 0 hours of seminar per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Letter grade.

Seminars: [Read Less](#) [-]

## MATH 295 Individual Research 1 - 12 Units

Terms offered: Summer 2016 10 Week Session, Spring 2016, Fall 2015

Intended for candidates for the Ph.D. degree.

Individual Research: Read More [+]

### Rules & Requirements

**Repeat rules:** Course may be repeated for credit without restriction.

### Hours & Format

**Fall and/or spring:** 15 weeks - 1-12 hours of independent study per week

### Summer:

3 weeks - 5 hours of independent study per week

6 weeks - 2.5-30 hours of independent study per week

8 weeks - 1.5-60 hours of independent study per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** The grading option will be decided by the instructor when the class is offered.

Individual Research: Read Less [-]

## MATH N295 Individual Research 0.5 - 5 Units

Terms offered: Summer 2022 8 Week Session, Summer 2021 8 Week

Session, Summer 2006 10 Week Session

Intended for candidates for the Ph.D. degree.

Individual Research: Read More [+]

### Rules & Requirements

**Repeat rules:** Course may be repeated for credit without restriction.

### Hours & Format

**Summer:** 8 weeks - 1-5 hours of independent study per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** The grading option will be decided by the instructor when the class is offered.

Individual Research: Read Less [-]

## MATH N297 General Academic Internship 0.5 Units

Terms offered: Prior to 2007

This is an independent study course designed to provide structure for graduate students engaging in summer internship opportunities. Requires a paper exploring how the theoretical constructs learned in academic courses were applied during the internship.

General Academic Internship: Read More [+]

### Rules & Requirements

**Repeat rules:** Course may be repeated for credit without restriction.

### Hours & Format

**Summer:** 8 weeks - 2.5 hours of independent study per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** Offered for satisfactory/unsatisfactory grade only.

General Academic Internship: Read Less [-]

## MATH 299 Reading Course for Graduate Students 1 - 6 Units

Terms offered: Fall 2018, Fall 2017, Fall 2016

Investigation of special problems under the direction of members of the department.

Reading Course for Graduate Students: Read More [+]

### Rules & Requirements

**Repeat rules:** Course may be repeated for credit without restriction.

### Hours & Format

**Fall and/or spring:** 15 weeks - 0 hours of independent study per week

### Summer:

6 weeks - 1-5 hours of independent study per week

8 weeks - 1-4 hours of independent study per week

### Additional Details

**Subject/Course Level:** Mathematics/Graduate

**Grading:** The grading option will be decided by the instructor when the class is offered.

Reading Course for Graduate Students: Read Less [-]

## MATH 301 Undergraduate Mathematics Instruction 1 - 2 Units

Terms offered: Fall 2018, Spring 2018, Fall 2017

May be taken for one unit by special permission of instructor. Tutoring at the Student Learning Center or for the Professional Development Program.

Undergraduate Mathematics Instruction: Read More [+]

### Rules & Requirements
