Computational Biology

Overview

Computational biology is an academic growth area that binds together multiple areas of biological research with the mathematical and computational sciences. It takes center stage in the new data-oriented biology by facilitating scientific discoveries based on high-throughput methods. The genomic revolution has fundamentally changed the biological sciences, and computational biology provides the means for translation of genomic discoveries into a new understanding of complex biological systems and eventually into improvements of the human condition through the development of solutions to environmental problems, new drug discoveries, and personalized medicine.

The Center for Computational Biology is Berkeley’s hub for research and training in computational biology and bioinformatics. Through courses, seminars, scientific meetings, and innovative training programs for PhD students administered by the Graduate Group in Computational Biology, the center catalyzes biological discoveries at the interface of biology, computation, and mathematics/statistics. As a campus strategic initiative, the center fosters an interactive, innovative, and collegiate environment for faculty, students, and postdoctorates drawn from five colleges and over a dozen academic departments. Faculty research interests are likewise diverse, ranging from computational and statistical genomics to population, comparative, and functional genomics; from bioinformatics and proteomics to evolutionary biology, phylogenomics, and statistical and computational methods development for modeling biological systems.

Undergraduate Programs

There is no undergraduate program in Computational Biology.

**CMPBIO 156 Human Genome, Environment and Public Health 4 Units**

Terms offered: Spring 2019

This introductory course will cover basic principles of human/population genetics and molecular biology relevant to molecular and genetic epidemiology. The latest methods for genome-wide association studies and other approaches to identify genetic variants and environmental risk factors important to disease and health will be presented. The application of biomarkers to define exposures and outcomes will be explored. Recent developments in genomics, epigenomics and other 'omics' will be included. Computer and wet laboratory work will provide hands-on experience.

Human Genome, Environment and Public Health: Read More [+]

**Rules & Requirements**

**Prerequisites:** Introductory level biology/genetics course, or consent of instructor. Introductory biostatistics and epidemiology courses strongly recommended

**Credit Restrictions:** Students who complete PBHLTH 256 or CMPBIO 156 receive no credit for completing PBHLTH C256.

**Hours & Format**

Fall and/or spring: 15 weeks - 4 hours of lecture per week

**Additional Details**

**Subject/Course Level:** Computational Biology/Undergraduate

**Grading/Final exam status:** Letter grade. Final exam required.

**Instructors:** Barcellos, Holland

**CMPBIO 198BC Berkeley Connect in Computational Biology 1 Unit**

Terms offered: Fall 2018, Fall 2017, Fall 2016

Berkeley Connect is a mentoring program, offered through various academic departments, that helps students build intellectual community. Over the course of a semester, enrolled students participate in regular small-group discussions facilitated by a graduate student mentor (following a faculty-directed curriculum), meet with their graduate student mentor for one-on-one academic advising, attend lectures and panel discussions featuring department faculty and alumni, and go on field trips to campus resources. Students are not required to be declared majors in order to participate. Course may be repeated.

Berkeley Connect in Computational Biology: Read More [+]

**Rules & Requirements**

**Repeat rules:** Course may be repeated for credit with advisor consent.

**Hours & Format**

Fall and/or spring: 15 weeks - 1 hour of discussion per week

**Additional Details**

**Subject/Course Level:** Computational Biology/Undergraduate

**Grading/Final exam status:** Offered for pass/not pass grade only. Final exam not required.

**Instructor:** Nielsen

**CMPBIO 201 Classics in Computational Biology 3 Units**

Terms offered: Fall 2015, Fall 2014, Fall 2013

Research project and approaches in computational biology. An introduction to the diverse ways biological problems are investigated computationally through critical evaluation of the classics and recent peer-reviewed literature. This is the core course required of all Computational Biology graduate students.

Classics in Computational Biology: Read More [+]

**Rules & Requirements**

**Prerequisites:** Acceptance in the Computational Biology Phd program; consent of instructor

**Hours & Format**

Fall and/or spring: 15 weeks - 1 hour of lecture and 2 hours of discussion per week

**Additional Details**

**Subject/Course Level:** Computational Biology/Graduate

**Grading:** Letter grade.

CMPBIO C256 Human Genome, Environment and Public Health 4 Units
Terms offered: Spring 2019, Spring 2018
This introductory course will cover basic principles of human/population genetics and molecular biology relevant to molecular and genetic epidemiology. The latest methods for genome-wide association studies and other approaches to identify genetic variants and environmental risk factors important to disease and health will be presented. The application of biomarkers to define exposures and outcomes will be explored. Recent developments in genomics, epigenomics and other ‘omics’ will be included. Computer and wet laboratory work will provide hands-on experience.

Human Genome, Environment and Public Health: Read More [+]

Prerequisites: Introductory level biology/genetics course, or consent of instructor. Introductory biostatistics and epidemiology courses strongly recommended

Credit Restrictions: Students who complete PB HLTH 256 receive no credit for completing PH C256.

Hours & Format
Fall and/or spring: 15 weeks - 4 hours of lecture per week

Additional Details
Subject/Course Level: Computational Biology/Graduate
Grading: Letter grade.
Instructors: Barcellos, Holland
Also listed as: PB HLTH C256

Human Genome, Environment and Public Health: Read Less [-]

CMPBIO C256A Human Genome, Environment and Human Health 3 Units
Terms offered: Spring 2017
This introductory course will cover basic principles of human/population genetics and molecular biology relevant to understanding how data from the human genome are being used to study disease and other health outcomes. The latest designs and methods for genome-wide association studies and other approaches to identify genetic variants, environmental risk factors and the combined effects of gene and environment important to disease and health will be presented. The application of biomarkers to define exposures and outcomes will be explored. The course will cover recent developments in genomics, epigenomics and other ‘omics’, including applications of the latest sequencing technology and characterization of the human microbiome.

Human Genome, Environment and Human Health: Read More [+]

Prerequisites: Introductory level biology course. Completion of introductory biostatistics and epidemiology courses strongly recommended and may be taken concurrently

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Computational Biology/Graduate
Grading: Letter grade.
Instructors: Barcellos, Holland
Also listed as: PB HLTH C256A

Human Genome, Environment and Human Health: Read More [+]

**CMPBIO C256B Genetic Analysis Method 3 Units**

Terms offered: Prior to 2007
This introductory course will provide hands-on experience with modern wet laboratory techniques and computer analysis tools for studies in molecular and genetic epidemiology and other areas of genomics in human health. Students will also participate in critical review of journal articles. Students are expected to understand basic principles of human/population genetics and molecular biology, latest designs and methods for genome-wide association studies and other approaches to identify genetic variants, environmental risk factors and the combined effects of gene and environment important to human health. Students will learn how to perform DNA extraction, polymerase chain reaction and methods for genotyping, sequencing, and cytogenetics.

**Rules & Requirements**

**Prerequisites:** Introductory level biology course. Completion of introductory biostatistics and epidemiology courses strongly recommended and may be taken concurrently with permission. PH256A is a requirement for PH256B; they can be taken concurrently.

**Hours & Format**

Fall and/or spring: 15 weeks - 2-2 hours of lecture and 1-3 hours of laboratory per week

**Additional Details**

**Subject/Course Level:** Computational Biology/Graduate

**Grading:** Letter grade.

**Instructors:** Barcellos, Holland

**Also listed as:** PB HLTH C256B

CMPBIO 290 Special Topics - Computational Biology 1 - 4 Units
Terms offered: Spring 2018, Spring 2016, Spring 2015
A graduate seminar class in which students closely examine recent computational methods in molecular and systems biology, for example for modeling mechanisms related to the regulation of gene expression and/or high-throughput sequencing data. The course will focus on computational methodology but will also cover relevant and interesting biological applications.

Rules & Requirements
Prerequisites: Graduate standing in EECS, MCB, Computational Biology or related fields; or consent of the instructor
Repeat rules: Course may be repeated for credit with instructor consent.

Hours & Format
Fall and/or spring: 15 weeks - 1-3 hours of lecture per week

Additional Details
Subject/Course Level: Computational Biology/Graduate
Grading: Letter grade.
Instructor: Yosef

Special Topics - Computational Biology: Read Less [-]

CMPBIO C293 Doctoral Seminar in Computational Biology 2 Units
Terms offered: Fall 2018
This one-year interactive seminar builds skills, knowledge and community in computational biology for first year PhD and second year Designated Emphasis students. Topics covered include concepts in human genetics/genomics, laboratory methodologies and data sources for computational biology, workshops/instruction on use of various bioinformatics tools, critical review of current research studies and computational methods, preparation for success in the PhD program and career development. Faculty members of the graduate program in computational biology and scientists from other institutions will participate. Topics will vary each semester.

Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of seminar per week

Additional Details
Subject/Course Level: Computational Biology/Graduate
Grading: Letter grade.
Instructors: Moorjani, Rokhsar

Also listed as: MCELLBI C296

Doctoral Seminar in Computational Biology: Read Less [-]

CMPBIO 294A Introduction to Research in Computational Biology 2 - 12 Units
Terms offered: Fall 2018, Fall 2017, Fall 2016
Closely supervised experimental or computational work under the direction of an individual faculty member; an introduction to methods and research approaches in particular areas of computational biology.

Rules & Requirements
Prerequisites: Standing as a Computational Biology graduate student
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 2-20 hours of laboratory per week

Additional Details
Subject/Course Level: Computational Biology/Graduate
Grading: Letter grade.

**CMPBIO 295 Individual Research for Doctoral Students 1 - 12 Units**
Terms offered: Summer 2019 10 Week Session, Summer 2018 10 Week Session, Spring 2018
Laboratory research, conferences. Individual research under the supervision of a faculty member.
Individual Research for Doctoral Students: Read More [+]

**Rules & Requirements**

**Prerequisites:** Acceptance in the Computational Biology PhD program; consent of instructor

**Repeat rules:** Course may be repeated for credit without restriction.

**Hours & Format**

Fall and/or spring: 15 weeks - 1-20 hours of laboratory per week

**Summer:** 10 weeks - 1.5-30 hours of laboratory per week

**Additional Details**

**Subject/Course Level:** Computational Biology/Graduate

**Grading:** Letter grade.

Individual Research for Doctoral Students: Read Less [-]

**CMPBIO 477 Introduction to Programming for Bioinformatics Bootcamp 1.5 Unit**
Terms offered: Prior to 2007
The goals of this course are to introduce students to Python, a simple and powerful programming language that is used for many applications, and to expose them to the practical bioinformatic utility of Python and programming in general. The course will allow students to apply programming to the problems that they face in the lab and to leave this course with a sufficiently generalized knowledge of programming (and the confidence to read the manuals) that they will be able to apply their skills to whatever projects they happen to be working on.
Introduction to Programming for Bioinformatics Bootcamp: Read More [+]

**Rules & Requirements**

**Prerequisites:** This is a graduate course and upper level undergraduate students can only enroll with the consent of the instructor

**Hours & Format**

**Summer:** 3 weeks - 40-40 hours of workshop per week

**Additional Details**

**Subject/Course Level:** Computational Biology/Other professional

**Grading:** Offered for satisfactory/unsatisfactory grade only.
