New Media

Overview

The Berkeley Center for New Media (BCNM) is a UC Berkeley initiative that supports research and teaching collaborations to better understand innovations in media. Our mission is to critically analyze and help shape innovations in new media from cross-disciplinary and global perspectives that emphasize the humanities and public interests.

Since such innovations have technical, social, political, and aesthetic qualities, a full understanding of their transformative powers requires collaborative analyses.

Led by a highly interdisciplinary community of 120 affiliated faculty, advisers, and scholars from 35 UC Berkeley departments, BCNM offers courses, degrees, certificates, research, and public programs about media that bring together inquiries based in Architecture, Philosophy, Film Studies, Art History, Art Practice, Performance Studies, Music, Engineering, Information, Journalism, and Law. A collaboration hub for both textual and material discourse, BCNM connects students and faculty with projects at the Berkeley Art Museum, the University Library, and many off-campus venues.

All media (Latin for *middle*) facilitate transformation: by definition, media are transformative. From the stone tablet to the printing press to the Internet, media have become increasingly reconfigurable. The value of a medium is often related to its capacity for reconfiguration. To claim a medium as "new" is to posit a meaningful improvement over prior media. Thus, new media are highly reconfigurable and doubly transformative: they achieve a transformation of prior modes of transformation.

New media often produce new experiences, new behaviors, and new insights, yet new media remain deeply rooted in powerful aesthetic, cultural, and political forces. As media transform, they often distort. Sophocles observed, "Nothing vast enters the life of mortals without a curse." BCNM actively engages scholars who critically examine the opportunities and risks associated with new media and who consider how new media can constructively benefit education, political engagement, privacy, and aesthetic experience.

BCNM catalyzes research, educates future leaders, and facilitates public discourse through courses, lectures, symposia, and special events. BCNM has established cross-disciplinary faculty positions and a special program for PhD students. BCNM expands traditional academic modes of scholarship with support for unorthodox artworks, analysis, designs, and experiments.

Undergraduate Program

The Berkeley Center for New Media offers a certificate program for undergraduate students at UC Berkeley. The certificate does not appear on a student's transcript but reflects the expertise in new media innovation that a student acquires in addition to their core major. The program includes courses on innovation, a service learning program, and a research program, in which students work together with graduate students and faculty on joint inquiries ranging from hardware design to human impact.

NWMEDIA 202 New Media Methods 3 Units
Terms offered: Fall 2014
In this methods course we will study key languages of new media innovation, ranging from flow charts to scripting languages and circuit diagrams. Our study method involves the creation and application of sensing devices in an urban context, and engages students in establishing chains of references which connect ground truth to data, data to information, information to people, people to actions, and actions to policies. Taking into account technical, political, cultural and literacy questions we seek to connect our data production work with information needs of underserved communities in the Bay Area region.

NWMEDIA C203 Critical Making 4 Units
Critical Making will operationalize and critique the practice of “making” through both foundational literature and hands on studio culture. As hybrid practitioners, students will develop fluency in readily collaging and incorporating a variety of physical materials and protocols into their practice. Students will envision and create future computational experiences that critically explore social and culturally relevant technological themes. No previous technical knowledge is required to take this course. Class projects involve basic programming, electronic circuitry, and digital fabrication design. Tutorials and instruction will be provided, but students will be expected to develop basic skills in these areas to complete course projects.

NWMEDIA C262 Theory and Practice of Tangible User Interfaces 4 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
This course explores the theory and practice of Tangible User Interfaces, a new approach to Human Computer Interaction that focuses on the physical interaction with computational media. The topics covered in the course include theoretical framework, design examples, enabling technologies, and evaluation of Tangible User Interfaces. Students will design and develop experimental Tangible User Interfaces using physical computing prototyping tools and write a final project report.

Terms offered: Spring 2015, Spring 2014
How does the design of new educational technology change the way people learn and think? How do we design systems that reflect our understanding of how we learn? This course explores issues on designing and evaluating technologies that support creativity and learning. The class will cover theories of creativity and learning, implications for design, as well as a survey of new educational technologies such as works in computer supported collaborative learning, digital manipulatives, and immersive learning environments.
