School of Optometry

Overview

The School of Optometry provides professional training in the art and science of vision care. The four-year professional program leads to the degree of Doctor of Optometry, which qualifies graduates to take the national and state board examinations required for licensure.

Doctors of Optometry are health care professionals. Optometry is a primary health-care profession that encompasses the prevention and remediation of disorders of the vision system through examination, diagnosis, treatment, and/or management of visual efficiency, eye health, and related systemic manifestations. Optometry graduates are trained to diagnose eye diseases, including the ocular manifestations of systemic diseases. The scope of contemporary optometric practice provides practitioners with independent responsibility for nonsurgical pharmaceutical treatment of eye disorders and diseases.

Doctors of Optometry are educated in the sciences of anatomy, chemistry, physics, mathematics, neurology, bacteriology, microbiology, disease processes and detection, pharmacology, behavioral science, social science, public health, and many other related fields. The school provides four years of comprehensive training in vision care aimed at preparing primary eye care providers. The first and second years emphasize courses in the sciences that are foundational to optometry and pre-clinical training in the fundamentals of the optometric examination. Subjects taught include the anatomy and physiology of the eye and visual system, visual perception and sensitivity, optics, oculomotor functions and neurology, binocular vision and space perception, evidence-based optometry, systemic and ocular pharmacology, systemic disease and its ocular manifestations, infant vision, diagnosis and treatment of sensorimotor anomalies, contact lenses, and clinical examination of the visual system. Active responsibility for patient care begins in the spring of the second year. The third year is devoted to advanced training in management and rehabilitation of sensorimotor anomalies, diagnosis and treatment of anterior and posterior segment ocular disease, low vision, advanced procedures in disease diagnosis, and caring for patients in the school’s primary care clinics. The fourth year consists of advanced patient care experience acquired in internal rotations through the school’s specialty clinics in areas such as low vision, pathology, contact lenses, infant vision, community and geriatric health care, and external rotations through eye care centers located in leading hospitals, medical centers, and clinics across the country.

Optometry offers a wide variety of interesting, challenging, and rewarding careers in private practice, in hospitals and other health organizations, and in public service. The education and clinical experience gained at the School of Optometry equip its graduates with the knowledge base and skills necessary to provide the highest level of contemporary vision care and to engage in lifelong learning to ensure they remain at the forefront of their profession.

Optometric Residency Program

A one-year Optometric Residency program is available to Doctors of Optometry seeking advanced optometric training. Areas of clinical study include binocular vision, cornea and contact lens, low vision, ocular disease, pediatrics, community health, and primary care. Successful completion of the program leads to the awarding of the Optometric Residency Certificate.

For further information about the Optometric Residency Program, please contact the Director of Residency Programs, Dr. Kuniyoshi Kanai, at kunikanai@berkeley.edu.

OPTOM 10 The Eye and Vision in a Changing Environment 2 Units

Terms offered: Spring 2019, Spring 2018, Spring 2017
Course covers introduction to the basis of common sight-reducing visual disorders with major public health implications for society—e.g., myopia, cataracts, diabetic hypertensive eye disorders, developmental disorders (e.g., lazy eye), and environmentally induced disease and disorders (solar eye burns, cataracts). Major approaches to the prevention, diagnosis, and treatment of common disorders will be addressed in terms of the biological and optical sciences underlying the treatment or prevention. Impact of eye care on society and health and care delivery will be reviewed.

OPTOM 84 Sophomore Seminar 1 or 2 Units
Terms offered: Spring 2011, Spring 2010, Spring 2009
Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.

OPTOM 39B Freshman/Sophomore Seminar 2 - 4 Units
Terms offered: Fall 2010, Fall 2009, Fall 2008
Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. No prerequisites. Enrollment limits are set by the faculty, but the suggested limit is 25.

OPTOM 98 Directed Group Study 1 Unit
Terms offered: Spring 2019, Fall 2018, Spring 2018
Directed group study for undergraduates interested in the field of optometry.

Rules & Requirements
Prerequisites: Priority given to freshmen and sophomores
Repeat rules: Course may be repeated for credit without restriction.

OPTOM 490A Optometric Spanish - Beginner Level I 1 Unit
Terms offered: Prior to 2007
This course provides an introduction to Spanish in its uses in a clinical
optometry setting with the Spanish-speaking patient. Basic vocabulary
and grammar acquisition and skill building exercises will help the
practitioner perform conversations and procedures in simple but accurate
and clear communications. The sounds and structures of Spanish,
including the present tense and some other verbs will be covered.
All materials will be taught and practiced in relation to their practical
application in a clinical setting.
