Electronic Intelligent Systems

The Electronic Intelligent Systems minor offers the opportunity to gain breadth as well as depth in the area of electronic intelligent systems that connect to the physical and social world. The minor includes sub-areas such as robotics, machine learning, and artificial intelligence as well as electronic/electrical engineering. Students learn computer programming as well as computer engineering. EIS minors achieve an understanding of conceptual foundations and emerging applications over a broad range of electrical engineering, computer engineering, and computer science subjects.

General Guidelines

1. All minors must be declared no later than one semester before a student’s Expected Graduation Term (EGT). If the semester before EGT is fall or spring, the deadline is the last day of RRR week. If the semester before EGT is summer, the deadline is the final Friday of Summer Sessions. To declare a minor, contact the department advisor for information on requirements, and the declaration process.

2. All courses taken to fulfill the minor requirements must be taken for graded credit.

3. All upper division courses taken to fulfill the minor must be completed with an overall GPA of 2.0 or above.

4. No more than one upper division course may be used to simultaneously fulfill requirements for a student’s major and minor programs.

5. Completion of the minor program cannot delay a student’s graduation. Students must declare the minor one semester before their final term.

6. EECS and L&S CS majors should not be pursuing an EIS minor.

7. All students must complete the EIS Minor Completion Form at least one semester before their final semester.
