Psychology

Bachelor of Arts (BA)

Psychology as a scientific discipline aims to describe, understand, and predict the behavior of living organisms. In doing so, psychology embraces the many factors that influence behavior — from sensory experience to complex cognition, from the role of genetics to that of social and cultural environments, from the processes that explain behavior in early childhood to those that operate in older ages, and from normal development to pathological conditions. The Psychology Department at UC Berkeley reflects the diversity of our discipline's mission covering six key areas of research: Behavioral and Systems Neuroscience; Clinical Science; Cognition; Cognitive Neuroscience; Developmental, and Social-Personality Psychology. Despite the existence of these specialization areas, the program learning goals focus on fostering methodological, statistical, and critical thinking skills that are not tied to any one particular content area in psychology but are relevant for all of them.

The major serves three purposes:

1. For the liberal arts student, the study of psychology provides an avenue for increased self-understanding and insight into the behavior of others. The objective study of behavior is one of the major themes of intellectual history in the last hundred-plus years.
2. For students preparing for training in such professions as medicine, law, education and business, psychology provides important basic knowledge and principles.
3. For students who plan on pursuing graduate work in psychology, the undergraduate major seeks to establish a sound foundation of research principles and knowledge of a variety of content areas.

Declaring the Major

Psychology is a capped (impacted) major at UC Berkeley. This means that due to high demand, the program unfortunately cannot accommodate every student who wishes to major in Psychology. As part of the terms of being a capped major, all students who apply to the major and meet the following criteria are guaranteed admission:

1. Have a 3.2 grade point average (GPA) in the prerequisite courses. (Note: GPA is not rounded up.)
2. Students who entered UC Berkeley as a freshman must declare the major by their 5th semester OR prior to the accumulation of 80 semester units including work in progress (AP or college credit obtained in high school do not count towards the 80 units). Those who entered Berkeley as a junior level transfer must declare the major no later than their first semester at UC Berkeley.
3. Submit the application to the major by the posted deadline. Please refer to the department website (https://psychology.berkeley.edu/students/undergraduate-program/apply-major) for exact deadlines.

If any of the above criteria are not met, students may still be admitted to the major. However, there is no guarantee. Please understand that applications will not be approved until all prerequisite courses are complete and final grades have been posted. This may mean that students will not technically be admitted to the major until the beginning of the following semester.

Honors Program

Students with a 3.5 GPA in their major and 3.3 GPA overall at the time of graduation may earn honors distinction in Psychology. In order to earn honors, students must apply for admission to the honors program. For students interested in the honors program, it is required to participate in the Undergraduate Research Apprentice Program (http://research.berkeley.edu/urap) or departmental research prior to applying for the honors program. This will prepare them for experimental research and design necessary for completing their own project.

Students are required to complete the following courses, none of which count toward major requirements:

- UGIS 192B or PSYCH 199 Students applying to the honors program will be research apprentices in the laboratory of their intended faculty sponsors. To prepare for this, students must have a minimum of 2 units of UGIS 192 or Psych 199 on their transcript prior to applying for the honors program. It is recommended that students begin as a research assistant in their sophomore or junior year.
- PSYCH 102 Statistics for Psychological Research is a 3 unit upper division course that is designed to introduce students to the data analysis techniques researchers using the field of psychology. This course is only offered in fall and may be taken as early as the junior year. This course must be taken for a letter grade (P/NP grading not accepted). Completion of PSYCH 10/PSYCH 101 is a required prerequisite to this course.
- PSYCH H194A / PSYCH H194B Honors students are required to concurrently enroll in Psychology H194A-B (2 units per semester), the honors seminar, in their senior year. This course provides excellent supplemental background and support for preparing the thesis.
- PSYCH H195A / PSYCH H195B Psychology H195A-B is offered for 1-3 units per semester and is mandatory in order to receive honors in the major. The course is sequential with a grade of “IP” for the “A” portion and the final grade assigned for both semesters at the end of the “B” portion.

Minor Program

There is a Summer Minor program offered through Psychology called “The Developing Child.”

In addition to the University, campus, and college requirements, listed on the College Requirements tab, students must fulfill the below requirements specific to their major program.

General Guidelines

1. All courses taken to fulfill the major requirements below must be taken for graded credit, other than courses listed which are offered on a Pass/No Pass basis only.
2. No more than one upper division course may be used to simultaneously fulfill requirements for a student's major and minor programs.
3. No more than two upper division course may be used to simultaneously fulfill the double major requirements or simultaneous degree programs.
4. A minimum grade point average (GPA) of 2.0 must be maintained in both upper and lower division courses used to fulfill the major requirements.
The Developing Child consists of five core, required 3-unit courses:

### Required Coursework

The Developing Child consists of five core, required 3-unit courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>PSYCH 142</td>
<td>Applied Early Developmental Psychology</td>
<td>3</td>
</tr>
</tbody>
</table>

### Lower Division Prerequisites

Students must complete eight prerequisite courses in the following areas:

- General Psychology (1 course)
- Biological Sciences (2 courses)
- Social Sciences (2 courses)
- Quantitative (3 courses including Psychology 101)

Students will follow a specific curriculum depending on when they were accepted to the university. For more information on which specific courses satisfy the prerequisite requirements, please visit the Psychology website: https://psychology.berkeley.edu/students/undergraduate-program/major-requirements

### Upper Division Requirements

Students must complete eight upper division Psychology courses separated into two tiers. Tier II consists of 5 courses with at least one in each of the following categories: Biological, Cognitive & Developmental, Social/Personality, and Clinical. The remaining three courses make up Tier III and can be satisfied by using any excess Tier II courses or any Psychology course numbered 104-182. For more information on which specific courses satisfy the prerequisite requirements, please visit the Psychology website: https://psychology.berkeley.edu/students/undergraduate-program/major-requirements

The Developing Child is a Summer Minor offered through Early Development & Learning Science (ED&LS). A growing body of evidence from diverse fields (e.g., neuroscience, child development, economics, public policy, psychology) demonstrates that young children’s “foundational” years influence later education, health and life-long outcomes. Undergraduates and visiting students can now pursue our summer-only minor or certificate program: The Developing Child. Please visit the program website (http://ihd.berkeley.edu/research-centers/early-summer-only minor or certificate program:  The Developing Child. Please visit the program website: https://psychology.berkeley.edu/students/undergraduate-program/major-requirements

### Minor Requirements

1. The minor degree or certificate consists of a minimum of 15 units (five 3-unit courses).
2. All courses taken to fulfill the minor requirements must be taken for graded credit.
3. A minimum grade point average (GPA) of 2.0 is required for courses used to fulfill the minor requirements.
4. The minor is open to enrollment for all Berkeley students; the certificate is available to visiting students.
5. No more than one upper division course may be used to simultaneously fulfill requirements for a student’s major and minor programs.

### Learning Goals

ED&LS weaves together foundational knowledge and practice from various disciplines to ensure that students understand early development from a variety of different perspectives and practices.

Students in the ED&LS Summer Minor and Certificate will:

1. Gain a complex understanding of the theoretical bases and empirical science of early development and learning, from the prenatal period to 8-years-old. Emphasis is on the interaction of biological, psychological, and socio-cultural mechanisms that shape young children’s health, development, and learning.
2. Develop an interdisciplinary approach to research, practice, and policy issues across early development and learning science domains (e.g., psychology, education, social welfare, public health, and public policy).
3. Become reflective and critical thinkers who are familiar with hands-on problem-solving to address crucial issues related to early development and learning.
4. Understand how to establish and foster effective partnerships with families, schools, social service agencies, and communities to create more responsive systems to serve culturally and linguistically diverse young children and their families.

Undergraduate students must fulfill the following requirements in addition to those required by their major program.

For detailed lists of courses that fulfill college requirements, please review the College of Letters & Sciences (http://guide.berkeley.edu/undergraduate/colleges-schools/letters-science) page in this Guide. For College advising appointments, please visit the L&S Advising (https://ls.berkeley.edu/advising/about-undergraduate-advising-services) Pages.

### University of California Requirements

#### Entry Level Writing

All students who will enter the University of California as freshmen must demonstrate their command of the English language by fulfilling the Entry Level Writing requirement. Fulfillment of this requirement is also a prerequisite to enrollment in all reading and composition courses at UC Berkeley.

#### American History and American Institutions

The American History and Institutions requirements are based on the principle that a US resident graduated from an American university, should have an understanding of the history and governmental institutions of the United States.
Berkeley Campus Requirement

American Cultures (http://americancultures.berkeley.edu/students/courses)

All undergraduate students at Cal need to take and pass this course in order to graduate. The requirement offers an exciting intellectual environment centered on the study of race, ethnicity and culture of the United States. AC courses offer students opportunities to be part of research-led, highly accomplished teaching environments, grappling with the complexity of American Culture.

College of Letters & Science Essential Skills Requirements

Quantitative Reasoning (http://guide.berkeley.edu/undergraduate/colleges-schools/letters-science/quantitative-reasoning-requirement)
The Quantitative Reasoning requirement is designed to ensure that students graduate with basic understanding and competency in math, statistics, or computer science. The requirement may be satisfied by exam or by taking an approved course.

Foreign Language (http://guide.berkeley.edu/undergraduate/colleges-schools/letters-science/foreign-language-requirement)
The Foreign Language requirement may be satisfied by demonstrating proficiency in reading comprehension, writing, and conversation in a foreign language equivalent to the second semester college level, either by passing an exam or by completing approved course work.

Reading and Composition (http://guide.berkeley.edu/undergraduate/colleges-schools/letters-science/reading-composition-requirement)
In order to provide a solid foundation in reading, writing, and critical thinking the College requires two semesters of lower division work in composition in sequence. Students must complete parts A & B reading and composition courses by the end of their second semester and a second-level course by the end of their fourth semester.

College of Letters & Science 7 Course Breadth Requirements

Breadth Requirements (http://guide.berkeley.edu/undergraduate/colleges-schools/letters-science/#breadthrequirementstext)
The undergraduate breadth requirements provide Berkeley students with a rich and varied educational experience outside of their major program. As the foundation of a liberal arts education, breadth courses give students a view into the intellectual life of the University while introducing them to a multitude of perspectives and approaches to research and scholarship. Engaging students in new disciplines and with peers from other majors, the breadth experience strengthens interdisciplinary connections and context that prepares Berkeley graduates to understand and solve the complex issues of their day.

Unit Requirements

- 120 total units
- Of the 120 units, 36 must be upper division units
- Of the 36 upper division units, 6 must be taken in courses offered outside your major department

Residence Requirements

For units to be considered in "residence," you must be registered in courses on the Berkeley campus as a student in the College of Letters & Science. Most students automatically fulfill the residence requirement by attending classes here for four years. In general, there is no need to be concerned about this requirement, unless you go abroad for a semester or year or want to take courses at another institution or through UC Extension during your senior year. In these cases, you should make an appointment to meet an adviser to determine how you can meet the Senior Residence Requirement.

Note: Courses taken through UC Extension do not count toward residence.

Senior Residence Requirement

After you become a senior (with 90 semester units earned toward your BA degree), you must complete at least 24 of the remaining 30 units in residence in at least two semesters. To count as residence, a semester must consist of at least 6 passed units. Intercampus Visitor, EAP, and UC Berkeley-Washington Program (UCDC) units are excluded.

You may use a Berkeley Summer Session to satisfy one semester of the Senior Residence requirement, provided that you successfully complete 6 units of course work in the Summer Session and that you have been enrolled previously in the college.

Modified Senior Residence Requirement

Participants in the UC Education Abroad Program (EAP), Berkeley Summer Abroad, or the UC Berkeley Washington Program (UCDC) may meet a Modified Senior Residence requirement by completing 24 (excluding EAP) of their final 60 semester units in residence. At least 12 of these 24 units must be completed after you have completed 90 units.

Upper Division Residence Requirement

You must complete in residence a minimum of 18 units of upper division courses (excluding UCEAP units), 12 of which must satisfy the requirements for your major.

Students are encouraged to familiarize themselves with the Psychology major requirements before making a program plan. For more detailed information regarding the courses listed below (e.g., elective information, GPA requirements, etc.), see the College Requirements and Major Requirements tabs.

### Accelerated Program Plans

For students considering graduating in less than four years, it’s important to acknowledge the reasons to undertake such a plan of study. While there are advantages to pursuing a three-year degree plan such as reducing financial burdens, they are not for everyone and do involve sacrifices; especially with respect to participating in co-curricular activities, depth of study, and summer internships, which typically lead to jobs upon graduation. All things considered, please see the tables for three and three and a half year degree options.

### 3.5 Year Plan

</table>

1. This is a sample program plan. This plan assumes that the student has completed the Entry Level Writing and American History and Institutions requirements prior to admission requirements prior to admission.
2. Students are strongly advised to work with an academic adviser to determine a personal program plan. Your program plan will differ depending on previous credit received, your course schedule, and available offerings.
3. Declare major the spring term of second year.
4. Students should also understand that while L&S Breadth requirements can be shuffled around within the plan, that is not the case for the lower-division prerequisites for the major. For majors with additional requirements for declaration, there is a limited window of eligibility for guaranteed admission.
5. All courses are subject to change every semester. Students must check the Online Schedule of Classes (http://schedule.berkeley.edu) for the most up-to-date course offerings.

### Mission

The Psychology Department at Berkeley reflects the diversity of the discipline’s mission covering six key areas of research: Behavioral and Systems Neuroscience; Clinical Science; Cognition; Cognitive Neuroscience; Developmental, and Social-Personality Psychology. Despite the existence of these specialization areas, the program learning goals focus on fostering methodological, statistical, and critical thinking skills that are not tied to any one particular content area in psychology but are relevant for all of them.

Most of the program level goals are introduced in PSYCH 1 These goals are extended and reinforced in a majority of the core courses. These include PSYCH 101, required of all majors, and the upper division Tier II courses that survey the major fields of psychology. There are several options to fulfill core coursework in each area and the following is a sampling of courses that fulfill the Tier II requirements: PSYCH 110; PSYCH C120, PSYCH 130, PSYCH 140 PSYCH 150 PSYCH 160. The program is designed to ensure that all students gain broad exposure to the field of psychology. In addition, students are encouraged to develop a deeper understanding of at least one major content area in psychology.

### Learning Goals for the Major

1. Understand basic concepts that characterize psychology as a field of scientific inquiry, and appreciate the various subfields that form the discipline as well as things that differentiate it from other related disciplines
2. Develop an understanding of the central questions/issues in contemporary psychology as well as a historical perspective of psychological theories and key empirical data
3. Develop a thorough understanding of one of the major content areas of psychology (i.e., Social/Psychology, Developmental, Clinical, Cognition, Biological)
4. Develop skills to critically evaluate the presentation of scientific ideas and research in original scientific papers as well as in the popular media.
5. Become familiar with research methods used in psychological research, and become proficient in basic concepts of statistical analyses and familiar with more advanced methods in data analyses and modeling
6. Learn to develop, articulate, and communicate, both orally and in written form, a testable hypothesis, or an argument drawing from an existing body of literature.
7. Apply a psychological principle to an everyday problem, or take an everyday problem and identify the relevant psychological mechanisms/ issues

### Psychology

Expand all course descriptions [+]-Collapse all course descriptions [-]
PSYCH 1 General Psychology 3 Units
Terms offered: Fall 2019, Spring 2019, Fall 2018
Introduction to the principal areas, problems, and concepts of psychology. This course is required for the major; students not considering a psychology major are directed to 2.

General Psychology: Read More [+]

Rules & Requirements

Prerequisites: Students who have passed Psych N1, Psych W1, or Psych 2 may not enroll in Psych 1

Credit Restrictions: Student receives a failing grade in PSYCH 1 and is eligible to take PSYCH W1 or PSYCH N1 in order to remove the deficient grade in lieu of repeating PSYCH 1. Students will not receive credit for Psych 1, Psych W1, or Psych N1 after completing Psych 2.

Repeat rules: Course may be repeated for credit under special circumstances: When receiving a failing grade in this course or a course equivalent (i.e. Psych W1 or N1).

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Summer: 6 weeks - 5 hours of lecture and 2.5 hours of discussion per week
8 weeks - 4 hours of lecture and 2 hours of discussion per week

Additional Details

Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

**PSYCH 3 Introduction to How the Brain Works 1 Unit**
Terms offered: Summer 2019 Second 6 Week Session, Summer 2018 Second 6 Week Session
This course will give a rigorous yet accessible overview of our current understanding of how the brain works and how it is altered by experience. Specifically, the class provides: an introduction to the structure and function of the sensory and motor systems; discussions of disorders and phenomena such as blindsight, synaesthesia, color blindness, and phantom limbs; and a lecture with presentation of classical experiments on the capacity of the young and adult brain for plasticity and learning.
Introduction to How the Brain Works: Read More [+]

**Rules & Requirements**

**Prerequisites:** A year of college-level general biology for majors

**Hours & Format**

**Fall and/or spring:** 15 weeks - 1 hour of lecture per week

**Summer:** 6 weeks - 3 hours of lecture per week

**Additional Details**

**Subject/Course Level:** Psychology/Undergraduate

PSYCH 5 Technology vs. Psychology: The Internet Revolution and the Rise of the Virtual Self 2 Units
Terms offered: Summer 2019 Second 6 Week Session, Summer 2018 Second 6 Week Session, Summer 2017 Second 6 Week Session
Most people have an online alter ego that is stronger and sexier but also angrier, more impulsive, and less ethical. These traits can become incorporated into offline personality, turning us into our avatar. Other psychological damage comes from the lack of online privacy and our new relationship with information. But the “Net” effect is not all bad; technology can also contribute to psychological wellbeing and make possible new treatments, including computerized therapy and virtual reality exposure therapy.

Technology vs. Psychology: The Internet Revolution and the Rise of the Virtual Self: Read More [+]

PSYCH 24 Freshman Seminars 1 Unit
Terms offered: Spring 2019, Fall 2018, Spring 2018
The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.
Freshman Seminars: Read More [+]

Rules & Requirements
Repeat rules: Course may be repeated for credit when topic changes.

Hours & Format
Fall and/or spring:
7 weeks - 2 hours of seminar per week
15 weeks - 1 hour of seminar per week
Summer: 6 weeks - 2.5 hours of seminar per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: The grading option will be decided by the instructor when the class is offered. Final exam required.

Freshman Seminars: Read Less [-]

PSYCH 39E Freshman/Sophomore Seminar 2 - 4 Units
Terms offered: Spring 2013, Fall 2011, Fall 2010
Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.
Freshman/Sophomore Seminar: Read More [+]

Rules & Requirements
Prerequisites: Priority given to freshmen and sophomores
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 2-4 hours of seminar per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: The grading option will be decided by the instructor when the class is offered. Final exam required.

Freshman/Sophomore Seminar: Read Less [-]
PSYCH 39I Freshman/Sophomore Seminar 2 - 4 Units
Terms offered: Spring 2009
Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.
Freshman/Sophomore Seminar: Read More [+]
Rules & Requirements
Prerequisites: Priority given to freshmen and sophomores
Repeat rules: Course may be repeated for credit without restriction.
Hours & Format
Fall and/or spring: 15 weeks - 2-4 hours of seminar per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: The grading option will be decided by the instructor when the class is offered. Final exam required.

PSYCH 48 Brain Development and Aging 1
Unit
Terms offered: Summer 2013 10 Week Session, Summer 2013 First 6 Week Session
This is an introductory survey course on brain and cognitive development. It gives an overview of brain structure and function and how it changes throughout life. Topics include: effect of pre-natal maternal and paternal behavior in brain development; critical periods; experience-dependent changes in the brain; the adolescent brain; and the aging brain. We will also discuss developmental disorders such as Down syndrome and the putative benefits of exercise and diet to brain health.
Brain Development and Aging: Read More [+]
Rules & Requirements
Prerequisites: One year of college level biology
Credit Restrictions: Students will receive no credit for Psychology 48 after taking Psychology 125.
Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture per week
Summer: 6 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Presti
Also listed as: MCELLBI C61

PSYCH C61 Brain, Mind, and Behavior 3
Units
Terms offered: Spring 2019, Spring 2018, Spring 2017
Introduction to human brain mechanisms of sensation, movement, perception, thinking, learning, memory, and emotion in terms of anatomy, physiology, and chemistry of the nervous system in health and disease. Intended for students in the humanities and social sciences and others not majoring in the biological sciences.
Brain, Mind, and Behavior: Read More [+]
Rules & Requirements
Credit Restrictions: Students will receive no credit for Molecular and Cell Biology/Psychology C61 after taking Molecular and Cell Biology 61, N61, W61, Molecular and Cell Biology 104, C100A/Chemistry C130, Molecular and Cell Biology 110, 130A, 136, 160, C160/Neuroscience C160 or Integrative Biology 132. A deficient grade in Molecular and Cell Biology 61, N61, or W61 can be removed with Molecular and Cell Biology C61. &lt;BR/&gt;Students cannot credit for both MCELLBI/PSYCH C61 AND Psych 110.
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

**PSYCH C64 Exploring the Brain: Introduction to Neuroscience 3 Units**

Terms offered: Summer 2019 8 Week Session, Summer 2018 8 Week Session, Summer 2017 8 Week Session

This course will introduce lower division undergraduates to the fundamentals of neuroscience. The first part of the course covers basic membrane properties, synapses, action potentials, chemical and electrical synaptic interactions, receptor potentials, and receptor proteins. The second part of the course covers networks in invertebrates, memory and learning behavior, modulation, vertebrate brain and spinal cord, retina, visual cortex architecture, hierarchy, development, and higher cortical centers.

Exploring the Brain: Introduction to Neuroscience: Read More [+]

**Rules & Requirements**

**Prerequisites:** High school chemistry or Chemistry 1A; high school biology or Biology 1A. Biology 1AL is not required

**Credit Restrictions:** Students will receive no credit for Molecular and Cell Biology/Psychology C64 after taking Molecular and Cell Biology C61/Letters and Science C30W, Molecular and Cell Biology C104, 100A/Chemistry C130, Molecular and Cell Biology 110, 130A, 136, 160, C160/Neuroscience C160, or Integrative Biology 132. Students may remove a deficient grade in Molecular and Cell Biology C64/Psychology C64 after Molecular and Cell Biology 64.

**Hours & Format**

- **Fall and/or spring:** 15 weeks - 2 hours of lecture and 1 hour of discussion per week
- **Summer:** 8 weeks - 4 hours of lecture and 2 hours of discussion per week

**Additional Details**

**Subject/Course Level:** Psychology/Undergraduate

**Grading/Final exam status:** Letter grade. Final exam required.

**Instructor:** Caporale

**Also listed as:** MCELLBI C64

Exploring the Brain: Introduction to Neuroscience: Read Less [-]

**PSYCH 88 Data Science for Cognitive Neuroscience 3 Units**

Terms offered: Spring 2018

The human brain is a complex information processing system and is currently the topic of multiple fascinating branches of research. Understanding how it works is a very challenging scientific task. In recent decades, multiple techniques for imaging the activity of the brain at work have been invented, which has allowed the field of cognitive neuroscience to flourish. Cognitive neuroscience is concerned with studying the neural mechanisms underlying various aspects of cognition, by relating the activity in the brain to the tasks being performed by it. This typically requires exciting collaborations with other disciplines (e.g. psychology, biology, physics, computer science).

Data Science for Cognitive Neuroscience: Read More [+]

**Rules & Requirements**

**Prerequisites:** This course is a Data Science connector course and may only be taken concurrently with or after COMPSCI C8/INFO C8/STAT C8

**Hours & Format**

- **Fall and/or spring:** 15 weeks - 2 hours of lecture and 1 hour of laboratory per week

**Additional Details**

**Subject/Course Level:** Psychology/Undergraduate

**Grading/Final exam status:** Letter grade. Final exam required.

Data Science for Cognitive Neuroscience: Read Less [-]

**PSYCH 98 Supervised Group Study 1 - 3 Units**

Terms offered: Spring 2016, Fall 2015, Spring 2015

Group study of selected topics. Enrollment restricted. See Introduction to Courses and Curriculum section of this catalog.

Supervised Group Study: Read More [+]

**Rules & Requirements**

**Repeat rules:** Course may be repeated for credit without restriction.

**Hours & Format**

- **Fall and/or spring:** 15 weeks - 1-3 hours of directed group study per week

**Additional Details**

**Subject/Course Level:** Psychology/Undergraduate

**Grading/Final exam status:** Offered for pass/not pass grade only. Final exam not required.

PSYCH 101 Research and Data Analysis in Psychology 4 Units
Terms offered: Fall 2019, Summer 2019 8 Week Session, Spring 2019
The course will concentrate on hypothesis formulation and testing, tests of significance, analysis of variance (one-way analysis), simple correlation, simple regression, and nonparametric statistics such as chi-square and Mann-Whitney U tests. Majors intending to be in the honors program must complete 101 by the end of their junior year.
Research and Data Analysis in Psychology: Read More [+]
Rules & Requirements
Prerequisites: 1 and completion of the quantitative prerequisites for the major
Credit Restrictions: Students will not receive credit for Psych 101 after having completed Psych 10 or Psych 101D. Deficient grade in Psych 10 can be replaced with Psych 101. Deficient grade in Psych 101D can be replaced with Psych 101.<BR/>
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Research and Data Analysis in Psychology: Read Less [-]

PSYCH 101D Data Science for Research Psychology 4 Units
Terms offered: Not yet offered
This Python based course builds upon the inferential and computational thinking skills developed in the Foundations of Data Science course by tying them to the classical statistical and research approaches used in Psychology. Topics include experimental design, control variables, reproducibility in science, probability distributions, parametric vs. nonparametric statistics, hypothesis tests (t-tests, one and two way ANOVA, chi-squared and odds-ratio), linear regression and correlation.
Data Science for Research Psychology: Read More [+]
Rules & Requirements
Prerequisites: Completion of the general psychology prerequisite (1, N1, or W1) and Foundations of Data Science (COMPSCI C8 / INFO C8 / STAT C8). Prospective Psychology majors need to take 101 or 101D to be admitted to the major. Majors intending to be in the honors program must complete 102 by the end of their junior year
Credit Restrictions: Not repeatable. Students will not receive credit for Psych 101D after having completed Psych 10 or Psych 101. Deficient grade in Psych 10 can be replaced with Psych 101D. Deficient grade in Psych 101D can be replaced with Psych 101.<BR/>
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Data Science for Research Psychology: Read Less [-]
PSYCH 102 Methods for Research in Psychological Sciences 3 Units
Terms offered: Fall 2019, Fall 2018, Fall 2017
Lecture and computer lab course on advanced data analysis techniques used by researchers in psychology. The course will cover programming techniques in R and data analysis methods that include modeling, multivariate statistics, and data reduction and visualization techniques. The following topics will be covered: generalized linear model (includes logistic regression), discriminant analysis (includes multivariate ANOVA), principal component analysis, and factor analysis.
Methods for Research in Psychological Sciences: Read More
Rules & Requirements
Prerequisites: 101

PSYCH 106 Psychology of Dreams 3 Units
Terms offered: Fall 2009, Fall 2006, Fall 2002
Dreaming is a necessary, universal nightly activity of the human mind and brain. This class will cover some of the major psychological theories, interpretations, and uses that have been made of dreams. Students will be encouraged to keep dream diaries to provide an experiential component to the class and so that they may apply the class topics and do research using the material they generate themselves.
Psychology of Dreams: Read More
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Grading/Final exam status: Letter grade. Final exam required.
Human Neuroanatomy: Read Less [-]

PSYCH 114 Biology of Learning 3 Units
Terms offered: Spring 2019, Spring 2018, Spring 2017
The biology of learning and neural plasticity is critical to our understanding of development, culture, behavioral change, uniqueness of individuals, and limits to an organism’s potential. We will study experimental investigations of behavior and neurobiology at the cellular and circuit level to get a basic introduction to what is known and unknown about learning and neural plasticity. Topics may include associative learning, habit formation, fear, memory systems, neurons, synapses, dendritic spines and axonal boutons, LTP, and adult neurogenesis. We will discuss these topics in the context of normal development and disease. Students will become familiar with thinking about the brain at the level of circuits, cells, synapses, and proteins.
Biology of Learning: Read More [+]
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Wilbrecht
Biology of Learning: Read Less [-]
PSYCH 115 Introduction to Brain Imaging Analysis Methods 3 Units
Terms offered: Fall 2019, Fall 1974
An introduction to brain imaging analysis methods with emphasis on functional magnetic resonance imaging (fMRI) of the human brain. Topics include: Basic MR physics of fMRI signals; linearity of the fMRI signal; time versus space resolution trade offs; noise in neuroimaging; correlation analysis; visualization methods; cortical reconstruction, inflation, and flattening; reverse engineering; relationship between brain activation and cognitive state; multi-voxel pattern analyses; fMRI-adaptation.
Introduction to Brain Imaging Analysis Methods: Read More [+]
Rules & Requirements
Prerequisites: Psychology C127 / Cognitive Science C127; Consent of Instructor; Basic coding experience (preferably with Matlab) is encouraged
Credit Restrictions: Students will receive no credit for PSYCH 115 after completing PSYCH 115. A deficient grade in PSYCH 115 may be removed by taking PSYCH 115.
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of seminar per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Alternate method of final assessment during regularly scheduled final exam group (e.g., presentation, final project, etc.).
Introduction to Brain Imaging Analysis Methods: Read Less [-]

PSYCH C116 Hormones and Behavior 3 Units
Terms offered: Spring 2019, Spring 2018, Spring 2017
This course provides a comprehensive overview of behavioral endocrinology beginning with hormone production and actions on target issues and continuing with an exploration of a variety of behaviors and their hormonal regulation/consequences. The course uses a comparative approach to examine the reciprocal interactions between the neuroendocrine system and behavior, considering the effects of hormone on development and adult behavior in addition to how behavior regulates endocrine physiology. While much of the course focuses on non-human vertebrate species, the relevance to humans is explored where appropriate. Topics include sexual differentiation and sex differences in behavior, reproductive, parental, and aggressive behaviors, and hormonal and behavioral homeostatic regulation.
Hormones and Behavior: Read More [+]
Rules & Requirements
Prerequisites: Completion of biological prerequisites for the major and consent of instructor; a course in mammalian physiology recommended
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Kriegsfeld
Also listed as: INTEGBI C143B

Grading/Final exam status: Letter grade. Final exam required.
Also listed as: COG SCI N100
Basic Issues in Cognition: Read Less [-]

PSYCH 121 Animal Cognition 3 Units
Terms offered: Fall 2016, Spring 2016, Spring 2014
This course focuses on how animals process, organize, and retain information. Specific topics include learning and memory, sensory processes, navigation and migration, communication, and cross-species comparisons of behavior. Material will be drawn from the ethological, behavioral/experimental, and, to a lesser extent, the neurosciences literature.

Animal Cognition: Read More [+]  

Rules & Requirements
Prerequisites: 115B or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

PSYCH 122 Introduction to Human Learning and Memory 3 Units
Terms offered: Spring 2014, Fall 2013, Fall 2012
Theoretical and experimental analysis of human learning and memory; short-term and long-term memory; coding and retrieval processes; transfer and interference; mechanisms of forgetting.

Introduction to Human Learning and Memory: Read More [+]  

Rules & Requirements
Prerequisites: Psychology 101 is recommended
Credit Restrictions: Students will receive no credit for Psychology 122 after having completed Psychology N122. A deficient grade in Psychology N122 may be removed by taking Psychology 122.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

PSYCH N122 Introduction to Human Learning and Memory 3 Units
Terms offered: Summer 2015 10 Week Session, Summer 2015 Second 6 Week Session
Theoretical and experimental analysis of human learning and memory; short-term and long-term memory; coding and retrieval processes; transfer and interference; mechanisms of forgetting.
Introduction to Human Learning and Memory: Read More [+] 
Rules & Requirements
Prerequisites: Psychology 101 is recommended
Credit Restrictions: Students will receive no credit for Psychology N122 after having completed Psychology 122. A deficient grade in Psychology 122 may be removed by taking Psychology N122.
Hours & Format
Summer: 6 weeks - 7.5 hours of lecture per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Introduction to Human Learning and Memory: Read Less [-]

PSYCH C123 Computational Models of Cognition 4 Units
Terms offered: Spring 2013, Fall 2011, Fall 2010
This course will provide advanced students in cognitive science and computer science with the skills to develop computational models of human cognition, giving insight into how people solve challenging computational problems, as well as how to bring computers closer to human performance. The course will explore three ways in which researchers have attempted to formalize cognition -- symbolic approaches, neural networks, and probability and statistics -- considering the strengths and weaknesses of each.
Computational Models of Cognition: Read More [+] 
Rules & Requirements
Prerequisites: Calculus, discrete mathematics, CogSci 1/1b/N1, Computer Science 61A, or equivalents
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Also listed as: COG SCI C131
Computational Models of Cognition: Read Less [-]

PSYCH 124 The Evolution of Human Social Behavior 3 Units
This course surveys the evolution of human social behaviors, seen in light of similar behaviors in other species. Topics include mating systems, parenting, cooperation, communication, learning and teaching, social norms, crime, aggression and morality. The course concludes with how humans interact socially with other species, e.g., pets and wildlife, and how human social behavior is adapting to robots and social media. Performance will be evaluated using weekly problem sets and three exams.
The Evolution of Human Social Behavior: Read More [+] 
Rules & Requirements
Prerequisites: Psychology 1 or 2
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
The Evolution of Human Social Behavior: Read Less [-]
PSYCH 125 The Developing Brain 3 Units
Terms offered: Spring 2018, Spring 2016, Fall 2014
What are the changes in brain structure and function that underlie improvements in cognitive abilities over childhood and adolescence? Or, coming from a different perspective, what insights can we gain regarding the neural basis of cognition by examining how the brain develops? And how are such findings relevant for medicine, education, and the law? The cutting-edge new field of developmental cognitive neuroscience is beginning to address these and other questions. This course will constitute an overview of current research and methods in this field, focusing on both typically and atypically developing children and adolescents. There is no textbook for this course; all readings will be primary sources (e.g., journal articles).

Rules & Requirements
Prerequisites: Recommend prior coursework in neuroscience, such as Psych/MCB c61, Psych 110, Psych 117, or Psych/COGSCI C127
Credit Restrictions: Students will receive no credit for 125 after taking 192 Fall 2007. Students will not receive credit for Psychology 125 after taking Psychology N125. A failing grade in Psychology N125 may be removed by taking Psychology 125.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Bunge

The Developing Brain: Read More [+]

PSYCH C126 Perception 3 Units
Terms offered: Spring 2019, Spring 2018, Spring 2017
An introduction to principal theoretical constructs and experimental procedures in visual and auditory perception. Topics will include psychophysics; perception of color, space, shape, and motion; pattern recognition and perceptual attention.

Rules & Requirements
Prerequisites: Consent of instructor. 101 recommended

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Also listed as: COG SCI C126
Perception: Read Less [-]

PSYCH C127 Cognitive Neuroscience 3 Units
Terms offered: Fall 2019, Fall 2018, Fall 2017
This course will examine research investigating the neurological basis of cognition. Material covered will include the study of brain-injured patients, neurophysiological research in animals, and the study of normal cognitive processes in humans with non-invasive behavioral and physiological techniques such as functional Magnetic Resonance Imaging (fMRI), electroencephalography (EEG), and transcranial magnetic stimulation (TMS). Topics to be covered include perception, attention, memory, language, motor control, executive control, and emotion. Cognitive Neuroscience: Read More [+]

Rules & Requirements
Prerequisites: Psych/MCB C61 OR Psych 110, or Psych C120/Cog Sci C100, and relevant prerequisites. Courses may be taken simultaneously with Psych C127. Enrollment limited to students who are declared Psych, CogSci, MCB, or IB majors, or by permission of the instructor if the student has declared another major

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Also listed as: COG SCI C127
Cognitive Neuroscience: Read Less [-]

PSYCH 128 Topical Seminars in Cognitive Psychology 3 Units
Terms offered: Spring 2017, Fall 2016, Spring 2015
For a precise schedule of offerings check with the Student Services Office each semester.
Topical Seminars in Cognitive Psychology: Read More [+]

Rules & Requirements
Prerequisites: Consent of instructor
Repeat rules: Course may be repeated for credit with instructor consent.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of seminar per week

PSYCH 132 Applied Early Developmental Psychopathology 3 Units
Terms offered: Summer 2018 Second 6 Week Session, Spring 1999, Spring 1996
In this course, we examine the developmental trajectories that lead to mental illness in young children by: 1) understanding abnormal development in the context of normal development, and vice versa; 2) using a developmental approach to identify continuities and discontinuities; 3) addressing how mental illness develops and why; 4) learning the role genes and contexts of development play; 5) investigating multiple levels, and the dynamic reciprocal transactions among them; and 6) applying our knowledge to children’s real-world experiences, to better understand the mental illness, its mechanisms, and its challenges.
Applied Early Developmental Psychopathology: Read More [+]

Rules & Requirements

Prerequisites: Prioritizing Education and Letters and Science Summer-Only Minor Students

Hours & Format

Summer:
6 weeks - 8 hours of seminar per week
12 weeks - 4 hours of seminar per week

PSYCH 135 Treating Mental Illness: Development, Evaluation, and Dissemination 3 Units
Terms offered: Spring 2019, Fall 2016, Spring 2016
Although progress has been made in developing and disseminating evidence-based treatments for most forms of mental illness, there are still huge gaps in our knowledge base. Coverage of serious mental illness with adequate and disseminable intervention strategies is all too limited. Hence, there is a great need for the next generation of clinical scientists to contribute to the mission of treatment development for mental illness. In this course we will learn about, and critique, treatment development models. We will review the steps in treatment development spanning from the study of mechanisms on to proof of concept and to establishing the feasibility of novel treatment ideas.

Rules & Requirements
Credit Restrictions: Students will receive no credit for Psychology 135 after taking Psychology N135. A failing grade in Psychology N135 can be removed by taking Psychology 135.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

PSYCH 136 Human Sexuality 3 Units
Terms offered: Summer 2019 3 Week Session, Summer 2018 Second 6 Week Session, Summer 2017 First 6 Week Session
Biological, social, and clinical issues in sexuality. Topics include psychology and physiology of sexual response, new developments in contraception, homosexuality and lesbianism, variations in sexual behavior, gender identity and role, definition and treatment of sexual dysfunction. Approved for state psychology licensing requirement.
Human Sexuality: Read More [+]

Objectives Outcomes
Course Objectives:
- To be acquainted with cognitive, affective, behavioral treatments and lifestyle change
- To be acquainted with psychological assessment of relevant symptoms and sequelae
- To interpret epidemiological findings from a socio-cultural perspective of health
- To learn relevant terminology in health-related disciplines
- To recognize physical as well as behavioral symptoms of diseases/disorders
- To trace the evolution of the field of psychosomatics
- To uncover the psychosomatic etiology of diseases and disorders covered in the course
- To understand the different types of psychosomatic processes

Hours & Format
Summer:
- 3 weeks - 15 hours of lecture per week
- 6 weeks - 7.5 hours of lecture per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

PSYCH 137 Mind-Body and Health 3 Units
Terms offered: Summer 2019 3 Week Session, Summer 2018 Second 6 Week Session
Course explores psychosomatics or mind-body interactions in a dozen diseases/disorders from recurrent ailments (e.g., asthma, gastrointestinal disorders) and chronic diseases (e.g., hypertension) to “terminal” diseases (e.g., cancer, AIDS); also included are specific disorders of appetite, sleep, and sexual functioning. For each of these, (i) symptoms (physical and psychological) are outlined, (ii) epidemiological data are used to illustrate socio-cultural underpinnings of health, and (iii) etiology examines how emotion, personality, and other psychological variables interact with the biological. Finally, (iv) psychosocial assessment and (v) cognitive-behavioral-affective treatments are presented for each disease/disorder.

PSYCH 138 Global Mental Health 3 Units
Terms offered: Summer 2019 3 Week Session, Spring 2002, Spring 2000
Global mental health seeks to alleviate suffering caused by mental disorders globally. Although most of the world lives in low-and-middle income countries, the majority of mental health resources are concentrated in high-income countries. Therefore, we focus on the mental health burden in low-resource settings. Through primary articles and recent chapters, this course integrates the scientific evidence, cultural and contextual nuances, and interdisciplinary approaches of global mental health.
Global Mental Health: Read More [+]

Objectives Outcomes

Course Objectives:
1) Gain an understanding of the:
   * Global perspectives and priorities in understanding mental health.
   * Multidimensional nature of mental health in low-resource settings—biological, psychological, cultural, economic, community, and organizational dimensions that are central to understanding and addressing mental disorders.
   * Importance of cultural expressions, cultural differences, and contextual nuances that affect diagnosing and treating mental disorders.
   * Major individual, clinical, community and population approaches to preventing, treating and managing mental disorders.
   * Role of the mental health delivery systems in preventing, identifying and treating mental disorders in different contexts.
2) Develop the critical thinking skills necessary to evaluate scientific ideas and research in original scientific papers and popular media.
3) Learn to articulate and communicate both orally and in written form a critical and nuanced understanding of current global mental health research.

Hours & Format

Summer:
3 weeks - 15 hours of lecture per week
6 weeks - 7.5 hours of lecture per week

Grading/Final exam status: Letter grade. Final exam required.

PSYCH 142 Applied Early Developmental Psychology 3 Units
Terms offered: Summer 2019 First 6 Week Session, Summer 2018 First 6 Week Session, Spring 2003
This lecture and small group activity course will examine the development of young children—from the prenatal period to age 8—in the varied contexts in which development occurs. The course is designed to introduce the basic theories and the research approaches that have been used to develop them. We will also explore how the contexts, the influences of environments in which children are growing and living, affect their development and our understanding of children. We will discuss how this understanding may be different, depending on whether one has studied psychology, neuroscience, education, social welfare, public health, or public policy, and how each contributes to our deeper understanding of children's healthy development.

Applied Early Developmental Psychology: Read More [+]

Rules & Requirements

PSYCH 145 Relationships: Development and Clinical Implications of Intimate Ties 3 Units
Terms offered: Summer 2002 10 Week Session, Summer 2001 10 Week Session, Summer 2000 10 Week Session
This lecture course focuses on the close relationships that most individuals – usually, beginning in infancy – will have formed during their lifetime, as well as the way such relationships can favorably or unfavorably influence an individual’s emotions and affect those of others. From infancy through young adulthood and old age, secure vs. insecure (e.g., ambivalent, avoidant, or unpredictable/frightening) relationships affect not only an individual’s happiness and general well-being, but also the eventual presence or absence of clinical symptomatology. Favorable vs. unfavorable relationships with parents, peers, close friends and romantic partners will be discussed, together with their consequences for psychological health and overall well-being.
Relationships: Development and Clinical Implications of Intimate Ties: Read More [+] 
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Relationships: Development and Clinical Implications of Intimate Ties: Read Less [-]

PSYCH 146 Developmental and Biological Processes in Attachment 3 Units
Terms offered: Spring 2017, Spring 2016, Fall 2014
This course on attachment theory provides an integrative (evolutionary/genetic/experiential) approach to studying secure vs. insecure parent-child relationships; their precursors in parental rearing patterns; and favorable vs. unfavorable sequelae. Adult life-history narratives indicative of secure vs. insecure adult attachment have been found associated with care-giving of offspring.
Developmental and Biological Processes in Attachment: Read More [+] 
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Developmental and Biological Processes in Attachment: Read Less [-]

PSYCH 147 Methods in Cognitive Development 3 Units
Terms offered: Spring 2019, Summer 1996 10 Week Session
The goal of this course is to introduce you to the excitement of studying development, primarily in humans. The course covers different methodologies for studying development, and how to interpret the resulting data. Students will become more wise consumers of empirical data on development, whether those data appear in scholarly or popular media. This course provides students with the analytical tools and productive skepticism required to objectively evaluate findings in developmental science.

PSYCH 149 Early Development & Learning Science Core Seminar 3 Units
Terms offered: Summer 2019 First 6 Week Session, Summer 2018 First 6 Week Session, Spring 2009
This course serves as the foundation to the Early Development & Learning Science minor. It will help students understand how best to promote children's robust early development and learning, integrating a variety of different perspectives. A wide range of approaches, representing different disciplines—education neuroscience, psychology, public health, public policy, and social work—will be presented by visiting lecturers to impart key aspects of supporting young children. Each perspective is necessary to understand and integrate with the others to most effectively address the complex problems facing young children and their families today.
Early Development & Learning Science Core Seminar: Read More [+]

Rules & Requirements
Prerequisites: Prioritizing ED&LS Summer-Only Minor Students

Hours & Format
Summer:
6 weeks - 7.5 hours of seminar per week
12 weeks - 4 hours of seminar per week

PSYCH 149A The Developing Child Practicum: Linking Research and Practice 3 Units
Terms offered: Summer 2019, Summer 2018 First 6 Week Session
A new seminar and fieldwork course designed to increase participants' knowledge of interdisciplinary, developmental science and how it applies to interdisciplinary practices when working with or on behalf of children ages 0-8. Participants will learn how to apply and integrate current research findings through hands-on experiences provided through their fieldwork placements. They will learn how to engage in more effective, research-informed interactions with children. The focus is on professional growth, including how to develop a interdisciplinary approach to working with or on behalf of children and their families.
The Developing Child Practicum: Linking Research and Practice: Read More [+]

Objectives Outcomes
Course Objectives: Participants will (further) develop their skills in facilitating Social and Emotional Support, Well-Organized Classrooms, Instructional Interactions. The course is grouped into five modules using these three areas as focal points. Each class meeting will give students the opportunity to know, see, do, and reflect, as the core components of effective and intentional interactions with young children.

Rules & Requirements
Prerequisites: Prioritizing ED&LS Summer-Only Minor Students
1) Sign up for a weekly 5-hour practicum placement
2) Provide copies of records verifying:
   - Tuberculosis (TB) clearance
   - Measles, Mumps, and Rubella Immunization (MMR)
   - Pertussis/Whooping Cough Immunization
   - Influenza (Flu) Vaccination or a signed opt-out statement

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of seminar and 4 hours of fieldwork per week

Summer: 12 weeks - 4 hours of seminar and 5 hours of fieldwork per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.

**PSYCH 149B** Contexts of Early Development  
3 Units  
Terms offered: Summer 2019 First 6 Week Session  
This seminar will examine the developmental context of young children—from the prenatal period to age 8. The course is designed to introduce research on how individual, family, pre-/school, community, and digital media contexts influence children’s development and learning. We will discuss how this understanding may be different, depending on whether one has studied psychology, neuroscience, education, social welfare, public health, or public policy, and how each contributes to our deeper understanding of children’s healthy development.  
Contexts of Early Development: Read More [+]

**Rules & Requirements**  
**Prerequisites:** Prioritizing ED&LS Summer-Only Minor Students

**Hours & Format**  
**Summer:** 12 weeks - 4 hours of seminar per week

**PSYCH 149C** Design Thinking for ED&LS  
3 Units  
Terms offered: Summer 2018 Second 6 Week Session  
This course will teach a human-centered, evidence-based method for finding new ways to solve persistent problems: Design Thinking. Design Thinking is a methodology for collaborative problem solving pioneered at the design firm IDEO and Stanford University to come up with game-changing solutions to difficult problems. As student learners accustomed to taking others’ perspectives and problem solving, we are especially well-suited to use Design Thinking. We will be tackling the problem of children’s school readiness. The goal of this class is to find imaginative and practical solutions -- imaginative enough to be exciting and effective for children and families, and practical enough to be able to pilot these solutions during the class.  
Design Thinking for ED&LS: Read More [+]

**Rules & Requirements**  
**Prerequisites:** Prioritizing ED&LS Summer-Only Minor Students

**Hours & Format**  
**Summer:** 6 weeks - 7.5 hours of seminar per week  
12 weeks - 4 hours of seminar per week

---

**PSYCH 149D** Early Childhood Policy  
3 Units  
Terms offered: Summer 2019 First 6 Week Session  
This seminar examines how the diverse policy contexts in which children are born and raised have dramatic implications for their life trajectories. We will explore how, when and why government intervenes in children’s lives, through family, pre-/school, community, and digital media contexts, aiming to improve their developmental trajectories. From this basis, we investigate the effects of policies on children locally, nationally, and internationally. Drawing from a variety of case studies and empirical research, students will gain a deep understanding of policy goals, development, implementation, and implications. After gaining familiarity with early childhood policies, students will develop their own early childhood policy.  
Early Childhood Policy: Read More [+]

**Course Objectives:** Learn to use new digital tools in creating multimedia texts and artifacts that demonstrate critical understanding of course content. Build collaboration skills. Demonstrate their understanding and skills through designing family, pre-/school, community, and digital media policy that supports the health and development of young children. Gain fluency in writing and analytic thinking by critiquing existing and proposed policy. In this course, students will: Learn to interpret relevant contextual factors that determine the viability and impact of family, pre-/school, community, and digital media policy.

**Rules & Requirements**  
**Prerequisites:** Prioritizing ED&LS Summer-Only Minor Students

**Hours & Format**  
**Summer:** 12 weeks - 4 hours of seminar per week

**Additional Details**  
**Subject/Course Level:** Psychology/Undergraduate  
**Grading/Final exam status:** Letter grade. Alternate method of final assessment during regularly scheduled final exam group (e.g., presentation, final project, etc.).

PSYCH 162 Human Happiness 3 Units
Terms offered: Summer 2011 10 Week Session, Summer 2011 Second 6 Week Session, Summer 2009 Second 6 Week Session
This course will take an interdisciplinary approach to an understanding of happiness. The first part of the course will be devoted to the different treatments of happiness in the world's philosophical traditions, focusing up close on conceptions or the good life in classical Greek and Judeo-Christian thought, the great traditions in East Asian thought (Taoism, Buddhism, Confucianism), and ideas about happiness that emerged more recently in the age of Enlightenment. With these different perspectives as a framework, the course will then turn to treatments of happiness in the behavioral sciences, evolutionary scholarship, and neuroscience. Special emphasis will be given to understanding how happiness arises in experiences of the moral emotions, including gratitude, compassion, reverence and awe, as well as aesthetic emotions like humor and beauty.

Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

PSYCH 164 Social Cognition 3 Units
Terms offered: Fall 2015, Spring 2014, Spring 2010
Surveys empirical and theoretical approaches to our understanding of perception, memory, thought, and language concerning ourselves, other people, interpersonal behavior, and the situations in which social interaction takes place. Emphasis is placed on the integration of problems in social, personality, and clinical psychology with the concepts and principles employed in the study of nonsocial cognition.
Rules & Requirements
Prerequisites: Required Courses: Psych 1, Psych W1, Psych 2, OR CogSci 1.<BR/>Recommended Courses: Psych 150 OR Psych 160
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

PSYCH 165 Psychology of Creativity 3 Units
Terms offered: Fall 2012, Fall 2010
This is a course on creativity, both at the individual and the group level. We will consider traits of highly creative individuals (vs. less creative individuals) and the ways in which they think. We will also investigate the ways in which influence processes affect individual creativity and will then focus on group creativity, including techniques by which creativity is hindered or stimulated. Finally, we will consider applications from organizations as we consider cultures in which creativity thrives. Throughout the course, discussion will be encouraged and we will also do some experiential exercises. The course will be a combination of lecture, discussion, and experiential learning.
Rules & Requirements
Prerequisites: 1. sophomore standing
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
PSYCH 166AC Cultural Psychology 3 Units
Terms offered: Summer 2019 Second 6 Week Session, Summer 2018 Second 6 Week Session, Summer 2017 Second 6 Week Session
The course will review research on culture, race, and ethnicity and will consider the implications of these findings for our understanding of race, culture, and ethnicity in American society. Mounting evidence suggests that psychological processes are culture-specific, theory-driven, and context-dependent. This course will focus on the effects that theories of mind, person, self, and social institutions have on human cognition, motivation, emotion, and social interactions in American society. Students will gain a better appreciation of the ways that cultural traditions and social practices regulate and transform psychological functioning. Simply, the course is about how culture affects psyche and how psyche affects culture.
Cultural Psychology: Read More [+]

Rules & Requirements
Prerequisites: 1; 160 is recommended
Requirements this course satisfies: Satisfies the American Cultures requirement
Hours & Format

Grading/Final exam status: Letter grade. Final exam required.
Cultural Psychology: Read Less [-]

PSYCH 167AC Stigma and Prejudice 3 Units
Terms offered: Fall 2019, Summer 2019 First 6 Week Session, Fall 2018 Traditionally, research on prejudice and stereotyping has focused on the psychological mechanisms that lead people to be biased against others. Recent research has begun to shed light on the psychological legacy of prejudice and stereotyping for their targets. This course will review the major contributions of each of these literatures, providing students with a broad understanding of both classic and current issues in the field. The course will be divided into three sections: bias (i.e., the perpetrator's perspective), stigma (i.e., the target's perspective), and intergroup relations.
Stigma and Prejudice: Read More [+]

Rules & Requirements

Primarily for majors. Introduction to the field of industrial psychology, covering fundamental theory and concepts in personnel and social aspects in the field. Concerned with the processes involved in developing and maintaining organizations.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Summer: 6 weeks - 5 hours of lecture and 2.5 hours of discussion per week

Additional Details
Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.
PSYCH 190A Early Learning: Engaging Interactions and Environments 3 Units

Terms offered: Fall 2015

A new lecture and practice course designed to increase participants’ knowledge and skills in providing preschool children with high quality early learning experiences. Using the research-based CLASS© tool as a framework, students learn how to engage in more effective teacher-child interactions and create environments that promote young children's social-emotional and cognitive development. Observation and analysis of classroom practices, through video recording, enable each student to receive individualized feedback from the instructor, as well as from peers. The focus is on professional growth, including developing abilities to support children's cultural and linguistic diversity.

Objectives

Course Objectives: Participants will (further) develop their skills in facilitating Social and Emotional Support, Well-Organized Classrooms, Instructional Interactions. The course is grouped into five modules using these three areas as focal points. Each class meeting will give students the opportunity to know, see, do, and reflect, as the core components of effective and intentional interactions with young children.

Rules & Requirements

Prerequisites: No previous coursework needed, but students must be currently working in an early education classroom to provide regular access to interacting with young children.

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Instructor: Hinshaw
