Public Health

Bachelor of Arts (BA)

The School of Public Health offers an undergraduate major through the College of Letters & Science (http://ls.berkeley.edu). The goal of the major is to provide students with an interdisciplinary understanding of epidemiology, biostatistics, environmental health, health behavior, and health policy. These areas of emphasis range across the spectrum of natural science to social science. Students in the program will develop and apply knowledge from multiple disciplines for the promotion and protection of the health of the human population, giving due consideration to principles of human rights and cultural perspectives that abound in a multicultural country and world.

Declaring the Major

Although the major remains capped (impacted), the department encourages all qualified students to apply. To qualify, students must have completed the prerequisites in math, biology, and the social sciences. For further information regarding these prerequisites, please see the Major Requirements tab on this page.

Students should apply to declare a major in Public Health after completion of the lower division requirements. Non-transfer students must apply to the major by the end of their fifth semester in attendance at UC Berkeley. Transfer students must apply by the end of their fifth semester in attendance at UC Berkeley.

After completing the prerequisites (http://www.sph.berkeley.edu/undergraduate-major/preparing-apply), students should submit an application, which includes the following:

1. A review of an applicant’s academic preparation (Coursework and GPA)
2. Two essays (Statement of Purpose and Personal History Statement)
3. Resume or CV

For more information, please see the School of Public Health website (http://www.sph.berkeley.edu/undergraduate-major/how-apply).

While completing the prerequisites for Public Health, students should also be taking all necessary steps to prepare themselves to declare an alternate major. While the department will do its best to bring in all qualified students, there is no guarantee that any one particular student will be admitted into the major. Therefore, students interested in the Public Health major should prepare an alternate major in case they are not selected. Public health demands everyone’s attention — there are myriad undergraduate majors at UC Berkeley that will help students prepare to work in this field. All students interested in the major, or the field of public health in general, are encouraged to consult with an academic adviser.

Summer Minor or Certificate Program

Public health seeks to improve human health through the development and application of knowledge that prevents disease, protects the public from harm, and promotes health throughout the state, the nation, and the world. Under the global public health summer minor or certificate, students will develop and apply knowledge from multiple disciplines for the promotion and protection of the health of the human population, giving due consideration to principles of human rights and many cultural perspectives in our multicultural country and world. The summer minor or certificate can serve as a precursor to further study in public health, other health professions, or any fields in which the health of persons and populations is a relevant concern. The summer minor can augment and enhance many different undergraduate bachelor degree programs and prepare students for professional and academic careers. In addition, public health is of interest for its own sake, as a component of a rigorous liberal arts education. Please note: the Summer Minor is only available to Berkeley students, and the Summer Certificate is only available to non-Berkeley students.

In addition to the University, campus, and college requirements, listed on the College Requirements tab, students must fulfill requirements specific to their major program.

General Guidelines

1. All courses taken to fulfill the major requirements below must be taken for graded credit, other than courses listed which are offered on a Pass/No Pass basis only. Other exceptions to this requirement are noted as applicable.
2. No more than one upper division course may be used to simultaneously fulfill requirements for a student’s major and minor programs, with the exception of minors offered outside of the College of Letters & Science.
3. A minimum grade point average (GPA) of 2.0 must be maintained in both upper and lower division courses used to fulfill the major requirements.

For information regarding residence requirements and unit requirements, please see the College Requirements tab.

Lower Division Prerequisites

All prerequisite courses must be completed before declaring the major with a minimum grade of C- or above.

The undergraduate Public Health program accepts Advanced Placement (AP) units for the Social Sciences and Math Prerequisites. AP scores of 3, 4, or 5 are acceptable for the following courses:

- Psychology for PSYCH 1 or PSYCH 2
- Economics (both micro and macro) for ECON 1, 2, or 3
- Government for POL SCI 2 or 4
- Math
  - A minimum score of a 3 on the Math AB or BC exam is equivalent to MATH 1A.
  - A score of 5 on the BC Math is equivalent to MATH 1A and 1B

If students have taken both an AP exam and the equivalent college-level course, we will only take the grade from the college-level course into consideration for admissions purposes. For AP Government, students may take either POL SCI 2 or 4 in combination with their AP score.

Biological Sciences

Select 7 units from the following:

<table>
<thead>
<tr>
<th>Course Code</th>

Elective Requirements

10 Units of Electives

Upper Division Requirements

PB HLTH 142 Introduction to Probability and Statistics in Biology and Public Health 4
PB HLTH 150A Introduction to Epidemiology and Human Disease 4
PB HLTH 150B Introduction to Environmental Health Sciences 3
PB HLTH 150D Introduction to Health Policy and Management 3
PB HLTH 150E Introduction to Community Health and Human Development 3

Capstone Requirement

Choose one:
PB HLTH 196 Special Topics in Public Health (Capstone) 3
PB HLTH H195A Special Study for Honors Candidates in Public Health 6
& PB HLTH H195B Health and Special Study for Honors Candidates in Public Health 4

Courses may be selected from the list below. It is not required for students to choose a specific subject concentration. Any PB HLTH courses (excluding the DeCal, group study, and independent research courses) can also meet elective requirements. Graduate courses at the School of Public Health can also count towards elective units.

Biostatistics

DEM 110 Introduction to Population Analysis 3
MATH 53 Multivariable Calculus 4
MATH 54 Linear Algebra and Differential Equations 4
PB HLTH 145 Statistical Analysis of Continuous Outcome Data 4
STAT 133 Concepts in Computing with Data 3
STAT 134 Concepts of Probability 4
STAT 135 Concepts of Statistics 4
STAT 150 Stochastic Processes 3
STAT 151A Linear Modelling: Theory and Applications 4
STAT 152 Sampling Surveys 4

Infectious Diseases

ESP C138/ MCELLB C114/ PLANTB C110 Introduction to Comparative Virology 4
INTEGBI 114 Infectious Disease Dynamics 4
INTEGBI 131 General Human Anatomy 3
INTEGBI 132 Survey of Human Physiology 4
INTEGBI 137 Human Endocrinology 4
MCELLB C100A/ BIOPHYS C130 Molecules of Life 4
MCELLB 102 Survey of the Principles of Biochemistry and Molecular Biology 4
MCELLB C114 Introduction to Comparative Virology 4
MCELLB 130 Cell and Systems Biology 4
MCELLB 140 General Genetics 4
MCELLB 150 Molecular Immunology 4
MCELLB 160 Cellular and Molecular Neurobiology 4
PLANTB C110L Biology of Fungi with Laboratory 4
PB HLTH C102/ MCELLB C103/ PLANTB C103 Bacterial Pathogenesis 3
PB HLTH 162A Public Health Microbiology 3

Epidemiology

DEM 110 Introduction to Population Analysis 3
GEOG 130 Food and the Environment 4
INTEGBI 131 General Human Anatomy 3
INTEGBI 132 Survey of Human Physiology 4
INTEGBI 140 Biology of Human Reproduction 4
MCELLB 140 General Genetics 4
PB HLTH 112 Global Health: A Multidisciplinary Examination 4

Environmental Health Sciences

CIV ENG 111 Environmental Engineering 3
CIV ENG 113 Ecological Engineering for Water Quality Improvement 3
CIV ENG 114 Environmental Microbiology 3
ECON/ ENVECON C102 Natural Resource Economics 4

NUSCTX 10 Introduction to Human Nutrition 3

Mathematics

Select two of the following, or their equivalents:
MATH 1A Calculus 4
MATH 1B Calculus 4
MATH 10A Methods of Mathematics: Calculus, Statistics, and Combinatorics 4
MATH 10B Methods of Mathematics: Calculus, Statistics, and Combinatorics 4
MATH 16A Analytic Geometry and Calculus 3
MATH 16B Analytic Geometry and Calculus 3
MATH 32 Precalculus (Only if completed Fall 2016 or earlier) 4

Social Science

Select three courses from at least two of the following areas:
Anthropology
ANTHRO 3 Introduction to Social and Cultural Anthropology 4
or ANTHRO 3AC Introduction to Social/Cultural Anthropology (American Cultures) 4

Economics
ECON 1 Introduction to Economics 4
or ECON 2 Introduction to Economics--Lecture Format 4
or ECON 3C Introduction to Environmental Economics and Policy 4

Political Science
POL SCI 2 Introduction to Comparative Politics 4
POL SCI 4 Introduction to Political Theory 4

Psychology
PSYCH 1 General Psychology 3
or PSYCH 2 Principles of Psychology 3

Sociology
SOCIOL 1 Introduction to Sociology 4
or SOCIOL 3AC Principles of Sociology: American Cultures 4
SOCIOL 5 Evaluation of Evidence 4

Upper Division Requirements

PB HLTH 142 Introduction to Probability and Statistics in Biology and Public Health 1
PB HLTH 150A Introduction to Epidemiology and Human Disease 4
PB HLTH 150B Introduction to Environmental Health Sciences 3
PB HLTH 150D Introduction to Health Policy and Management 3
PB HLTH 150E Introduction to Community Health and Human Development 3

Capstone Requirement

Choose one:
PB HLTH 196 Special Topics in Public Health (Capstone) 3
PB HLTH H195A Special Study for Honors Candidates in Public Health 6
& PB HLTH H195B Health and Special Study for Honors Candidates in Public Health 4

1 Alternatively, PB HLTH 141 can be substituted for PB HLTH 142 Introduction to Probability and Statistics in Biology and Public Health.

Elective Requirements
Overview
The summer Global Public Health Minor/Certificate explores health-related issues affecting populations in the United States and worldwide. Students complete courses covering a range of disciplines and methods relevant to promotion and protection of human health, emerging health issues, healthcare systems, and approaches to address and intervene. It will expand knowledge and comprehension of domestic and international challenges for human health. Valuable internship experience, completed locally, nationally, or abroad, and the development of both technical and public health practice skills is part of the available curriculum. The certificate can be pursued by non-UC Berkeley students in or outside of California, including international students.

Please note: this program option is only available during the summer.

The two options available are described below:

Summer Global Public Health Minor for UC Berkeley students: The Summer Minor in Global Public Health consists of three core and two elective courses taught in two consecutive, six-week summer sessions. Completion of core courses and any two electives listed below will satisfy the minor. A local or global public health 8-week internship with required seminar can also serve as one of the elective courses. Students declaring a minor must do so in writing to the Director of Undergraduate Program at the School of Public Health. The minor can be completed in
one or two summers. Students pursuing the 8-week internship as one elective will need two summers to complete the minor.

**Summer Global Public Health Certificate for non-UC Berkeley students:** The Summer Certificate in Global Public Health consists of three core and two elective courses taught in two consecutive, six-week summer sessions. Once the required core courses are completed, any two electives listed below will satisfy the requirements of the certificate. The certificate can be completed in one or two summers.

UC Berkeley and visiting students who do not want to declare the minor or receive a certificate, but are interested in these classes may enroll in as many courses as they wish.

### Core Courses for Summer Global Public Health Minor or Summer Global Public Health Certificate

<table>
<thead>
<tr>
<th>Required Courses/Total Units</th>
<th>11</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>PB HLTH 112</strong></td>
<td>Global Health: A Multidisciplinary Examination (Session A, p.m.) Good health at the individual and community level is central to human happiness, economic development, and societal progress. Good health, which is not simply the absence of illness and injury, is the result of the complex interplay of many factors, including the legal, social, political, and physical environments, economic forces, food availability and nutrition, access to safe water and sanitation, cultural beliefs and human behaviors, religion, and the availability of affordable preventive measures such as vaccines and of curative services, among others. By definition, global health transcends geopolitical borders and standard academic disciplines, so a broad multidisciplinary approach to its study and understanding is required. Students will be expected to read, understand, and use sometimes advanced materials from diverse disciplines. Case-based discussions will be included in the course. This is a three-unit course.</td>
</tr>
<tr>
<td><strong>PB HLTH 250A</strong></td>
<td>Epidemiologic Methods I (Session D, p.m.) This three-unit introductory course presents the principles and methods of epidemiology, including descriptive and analytic approaches to assessing the distributions of health, disease, and injury in populations and factors that influence those distributions. The emphasis is on developing an understanding of concepts, rather than quantitative methods, although calculations are involved. Through the combination of lectures, readings, critical review of papers, and problem sets, students without prior coursework in epidemiology will acquire the core competencies in epidemiology expected of all public health professionals. Examples are drawn from national and international public health issues.</td>
</tr>
<tr>
<td><strong>PB HLTH 141</strong></td>
<td>Introduction to Biostatistics (Session D, a.m.) An intensive five-unit introductory course in statistical methods used in applied research with an emphasis on principles of statistical reasoning, underlying assumptions, and careful interpretation of results. Topics covered include: descriptive statistics, graphical displays of data, introduction to probability, expectations and variance of random variables, confidence intervals and tests for means, differences of means, proportions, differences of proportions, chi-square tests for categorical variables, regression and multiple regression, an introduction to analysis of variance. Statistical software (STATA) will be used to supplement hand calculations.</td>
</tr>
</tbody>
</table>

### Elective Courses for Global Health Minor or Global Health Certificate/Total Units

Undergraduate students in the College of Letters & Science must fulfill the following requirements in addition to those required by their major program.

For detailed lists of courses that fulfill college requirements, please review the College of Letters & Sciences (http://guide.berkeley.edu/undergraduate/colleges-schools/letters-science) page in this Guide.

### Entry Level Writing (http://writing.berkeley.edu/node/78)

All students who will enter the University of California as freshmen must demonstrate their command of the English language by fulfilling the Entry Level Writing requirement. Fulfillment of this requirement is also a prerequisite to enrollment in all reading and composition courses at UC Berkeley.

### American History and American Institutions (http://guide.berkeley.edu/undergraduate/colleges-schools/letters-science/american-history-institutions-requirement)

The American History and Institutions requirements are based on the principle that a US resident graduated from an American university, should have an understanding of the history and governmental institutions of the United States.

### American Cultures (http://americancultures.berkeley.edu/students/courses)

American Cultures is the one requirement that all undergraduate students at Cal need to take and pass in order to graduate. The requirement offers an exciting intellectual environment centered on the study of race, ethnicity and culture of the United States. AC courses offer students opportunities to be part of research-led, highly accomplished teaching environments, grappling with the complexity of American Culture.

### Quantitative Reasoning

The Quantitative Reasoning requirement is designed to ensure that students graduate with basic understanding and competency in math, statistics, or computer science. The requirement may be satisfied by exam or by taking an approved course.

### Foreign Language

The Foreign Language requirement may be satisfied by demonstrating proficiency in reading comprehension, writing, and conversation in a foreign language equivalent to the second semester college level, either by passing an exam or by completing approved course work.

### Reading and Composition

In order to provide a solid foundation in reading, writing, and critical thinking the College requires two semesters of lower division work in composition in sequence. Students must complete a first-level reading and composition course by the end of their second semester and a second-level course by the end of their fourth semester.

### Breadth Requirements

The undergraduate breadth requirements provide Berkeley students with a rich and varied educational experience outside of their major program. As the foundation of a liberal arts education, breadth courses give students a view into the intellectual life of the University while introducing them to a multitude of perspectives and approaches to research and scholarship. Engaging students in new disciplines and with peers from other majors, the breadth experience strengthens interdisciplinary connections and context that prepares Berkeley graduates to understand and solve the complex issues of their day.
Unit Requirements

- 120 total units, including at least 60 L&S units
- Of the 120 units, 36 must be upper division units
- Of the 36 upper division units, 6 must be taken in courses offered outside your major department

Residence Requirements

For units to be considered in “residence,” you must be registered in courses on the Berkeley campus as a student in the College of Letters & Science. Most students automatically fulfill the residence requirement by attending classes here for four years. In general, there is no need to be concerned about this requirement, unless you go abroad for a semester or year or want to take courses at another institution or through UC Extension during your senior year. In these cases, you should make an appointment to meet an adviser to determine how you can meet the Senior Residence Requirement.

Note: Courses taken through UC Extension do not count toward residence.

Senior Residence Requirement

After you become a senior (with 90 semester units earned toward your BA degree), you must complete at least 24 of the remaining 30 units in residence in at least two semesters. To count as residence, a semester must consist of at least 6 passed units. Intercampus Visitor, EAP, and UC Berkeley-Washington Program (UCDC) units are excluded.

You may use a Berkeley Summer Session to satisfy one semester of the Senior Residence requirement, provided that you successfully complete 6 units of course work in the Summer Session and that you have been enrolled previously in the college.

Modified Senior Residence Requirement

Participants in the UC Education Abroad Program (EAP) or the UC Berkeley Washington Program (UCDC) may meet a Modified Senior Residence requirement by completing 24 (excluding EAP) of their final 60 semester units in residence. At least 12 of these 24 units must be completed after you have completed 90 units.

Upper Division Residence Requirement

You must complete in residence a minimum of 18 units of upper division courses (excluding EAP units), 12 of which must satisfy the requirements for your major.

Learning Goals for the Major

1. Critical Thinking Skills
   - Describe the public health framework of the determinants of the health of populations.
   - Recognize the public health perspective of disease prevention and health promotion.
   - Explain how public health studies the interplay between biology, environment, and behavior.
   - Understand the basic concepts from the social and behavioral sciences in public health.

2. Quantitative Skills
   - Recognize commonly used measures of population health.
   - Identify commonly used methods of measuring risk.

   - Describe common study designs for assessing risk from exposures.
   - Assemble and display summary measures using graphs and tables.
   - Recognize the basics of statistical hypothesis testing.
   - Know how to calculate and interpret confidence intervals.

3. Communication Skills
   - Incorporate statistical and scientific findings into written materials.
   - Prepare fact sheets and other health education tools.
   - Know how to interpret public health reports and scientific literature.
   - Create and give presentations on public health issues.

4. Problem-Solving Skills
   - Research and summarize relevant public health literature.
   - Apply the systems thinking approach to issues in public health.
   - Identify problems in public health with upstream-downstream model.

5. Specialized Knowledge
   - Integrate human biology and genetics with public health issues.
   - Comprehend the basics of infectious disease.
   - Understand the basics of chronic disease.
   - Examine and assess environmental health issues.
   - Describe the organization and financing of the United States health care system.

6. Lifelong Learning Skills
   - Identify ethical issues of public health.
   - Be able to perform data collection and research.
   - Acknowledge the role of disparities in public health.

Public Health

PB HLTH 14 Healthy People: Introduction to Health Promotion 4 Units

Terms offered: Spring 2016, Spring 2015, Spring 2014
Introduction to personal and community health, drawing on physical and social sciences. Specific areas include stress, alcohol and drugs, nutrition, exercise, the environment, communication, and sexuality. Readings, lectures, and discussions explore key issues for students and examine those issues in the context of contemporary American society. Public health approaches to disease prevention and health promotion are explored for each topic.

Healthy People: Introduction to Health Promotion: Read More [+]

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Kodama

Healthy People: Introduction to Health Promotion: Read Less [-]
PB HLTH 15 Introduction to Global Health Equity 3 Units
Terms offered: Spring 2018, Spring 2017
This seminar provides an overview of the intersection between global health and social justice, with a specific focus on the ways in which inequity, specifically the conditions that lead to poverty, disproportionately affect health outcomes. Students will learn about the historical and theoretical underpinnings of global health, how social determinants affect medical outcomes and health policy, the principles of international law and health economics, and the structure of health delivery models. In the process, students will engage in topics related to social factors that impact health, including class, race, gender, and poverty. Class discussions will address contemporary global health priorities through the lens of human rights activism.

PB HLTH 101 A Sustainable World: Challenges and Opportunities 3 Units
Terms offered: Spring 2018
Human activity and human numbers threaten the possibility of irreversible damage to the fragile biosphere on which all life depends. The current generation of students is the first one to face this existential problem and it may be the last one that can solve it. The goal of this course is for faculty with expertise in the many variables involved-energy consumption, food security, population growth and family planning, climate change, governance, migration, resource consumption, etc.-to give one-hour presentations on their specific topic. Teacher Scholars supervised by a GSI will facilitate student discussion groups, who will then prepare brief statements responding to the challenge presented, and suggest ways of ameliorating the problems.

A Sustainable World: Challenges and Opportunities: Read More [+]

A Sustainable World: Challenges and Opportunities: Read Less [-]
PB HLTH C102 Bacterial Pathogenesis 3 Units
This course for upper division and graduate students will explore the molecular and cellular basis of microbial pathogenesis. The course will focus on model microbial systems which illustrate mechanisms of pathogenesis. Most of the emphasis will be on bacterial pathogens of mammals, but there will be some discussion of viral and protozoan pathogens. There will be an emphasis on experimental approaches. The course will also include some aspects of bacterial genetics and physiology, immune response to infection, and the cell biology of host-parasite interactions.
Bacterial Pathogenesis: Read More [+]

PB HLTH 107 Violence, Social Justice, and Public Health 2 Units
Terms offered: Summer 2018 First 6 Week Session, Summer 2017 First 6 Week Session, Summer 2016 10 Week Session
This course addresses violence as a public health issue, using an interdisciplinary public health approach to enable undergraduate students to explore and analyze violence from personal, social, community and political perspectives. Students will learn to apply public health strategies to identify causes of violence and develop practical community-based plans to prevent violence and promote safety. This course will examine violence through the lens of the college campus, paying particular attention to the types of violence more commonly seen on, or associated with, collegiate life, and will include a term paper component.

PB HLTH 116 Seminar on Social, Political, and Ethical Issues in Health and Medicine 3 Units
Terms offered: Spring 2018, Fall 2017, Spring 2017
This course offers an introduction to issues and perspectives related to health and medicine. Guest lecturers speak about the week’s topic, which can include a variety of topics such as public health, violence, chronic illnesses, environmental health, and health care economics. Speakers share their first-hand experiences in their fields, discuss current issues, debate ethical dilemmas, and pose and answer questions. During the weekly discussion sections, students delve deeper into the issues, not only exploring and perhaps questioning their own thoughts and beliefs, but also learning from the experiences and perspectives of their fellow students.

PB HLTH C117 Introduction to Global Health Disparities Research 2 Units
This course is designed to prepare trainees in the UC Berkeley “Minority Health/Global Health” (MH/GH) program to conduct a ten-week infectious disease research project in a disease-endemic country. The course provides a background in neglected tropical disease research, international research ethics, and the conduct of health research in low-resource settings.
Introduction to Global Health Disparities Research: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Reingold

PB HLTH 118 Nutrition in Developing Countries 3 Units
Terms offered: Summer 2018 Second 6 Week Session, Fall 2017, Summer 2017 Second 6 Week Session
We will focus on low- and middle-income countries because they experience the greatest burden of malnutrition, and because they face a unique context of limited financial and government resources. In this course, we will discuss the effects of nutrition throughout the lifecycle in pregnancy, infancy, childhood, and adulthood. We will focus on nutrition broadly including issues of undernutrition, micronutrient deficiencies, and obesity. We will also analyze and evaluate actions taken to ameliorate the major nutritional problems facing vulnerable populations in low- and middle-income countries.
Nutrition in Developing Countries: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Summer: 6 weeks - 8 hours of lecture per week
Additional Details
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Instructor: Fernald

PB HLTH 126 Health Economics and Public Policy 3 Units
This course focuses on a selected set of the major health policy issues and uses economics to uncover and better understand the issues. The course examines the scope for government intervention in health markets.
Health Economics and Public Policy: Read More [+]

Rules & Requirements
Prerequisites: Public Health major or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Summer: 8 weeks - 6 hours of lecture per week
Additional Details
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Scheffler
Health Economics and Public Policy: Read Less [-]
PB HLTH 129 The Aging Human Brain 3 Units
Terms offered: Fall 2017
The course will survey the field of the human brain, with introductory lectures on the concepts of aging, and brief surveys of normal neuroanatomy, neurophysiology, neurochemistry, and neuropsychology as well as methods such as imaging, epidemiology, and pathology. The neurobiological changes associated with aging will be covered from the same perspectives: neuropsychology, anatomy, biochemistry, and physiology. Major neurological diseases of aging including Alzheimer’s and Parkinson’s disease will be covered, as will compensatory mechanisms, neuroendocrine changes with aging, depression and aging, epidemiology of aging, and risk factors for decline.
The Aging Human Brain: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Final exam not required.

Instructor: Jagust

The Aging Human Brain: Read Less [-]

PB HLTH 130 Advanced Health Policy 3 Units
Terms offered: Spring 2018, Fall 2017, Spring 2017
This course will give you the opportunity to build upon your understanding of the organization, financing and current policy issues of the US health care delivery system obtained in PH 150D. In this course you will become engaged health policy analysts, applying policy making tools (e.g., policy memos/briefs, legislative analysis, regulatory comments, media advocacy, public testimony) to actual health issues and problems. Through individual and group work, you will draw upon both verbal and written communication skills to effectuate health policy change.
Advanced Health Policy: Read More [+]

Rules & Requirements

Prerequisites: PH 150D

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

Instructor: Flagg

PB HLTH 141 Introduction to Biostatistics 5 Units
Terms offered: Summer 2017 Second 6 Week Session, Summer 2016 10 Week Session, Summer 2016 Second 6 Week Session
An intensive introductory course in statistical methods used in applied research. Emphasis on principles of statistical reasoning, underlying assumptions, and careful interpretation of results. Topics covered: descriptive statistics, graphical displays of data, introduction to probability, expectations and variance of random variables, confidence intervals and tests for means, differences of means, proportions, differences of proportions, chi-square tests for categorical variables, regression and multiple regression, an introduction to analysis of variance. Statistical software will be used to supplement hand calculation. Students who successfully complete Public Health 141 are prepared to continue their biostatistics course work in 200-level courses. With the approval of their degree program, MPH students may use Public Health 141 to fulfill the biostatistics course requirement (contact program manager for approval). Public Health 141 also fulfills the biostatistics course requirement for the Public Health Undergraduate Major.
Introduction to Biostatistics: Read More [+]

Rules & Requirements

Prerequisites: High school algebra

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture, 1 hour of discussion, and 2 hours of laboratory per week

Summer: 6 weeks - 12.5 hours of lecture and 7.5 hours of laboratory per week

Additional Details

Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

Instructor: Flagg

PB HLTH W142 Introduction to Probability and Statistics in Biology and Public Health 4 Units
Terms offered: Spring 2018, Spring 2016, Spring 2015
Descriptive statistics, probability, probability distributions, point and interval estimation, hypothesis testing, chi-square, correlation, and regression with biomedical applications.
Introduction to Probability and Statistics in Biology and Public Health: Read More [+]

Rules & Requirements
Prerequisites: 142 or consent of instructor

Credit Restrictions: This course (or equivalent) is required for students who plan to enroll in 251, Practicum in Epidemiological Methods. Enrollment is limited to School of Public Health students. If space permits, others may enroll with consent of instructor.

Hours & Format
Fall and/or spring: 8 weeks - 2 hours of lecture and 3 hours of laboratory per week

Additional Details
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Lein

Introduction to SAS Programming: Read Less [-]

PB HLTH 144A Introduction to SAS Programming 2 Units
Terms offered: Spring 2016, Spring 2015, Spring 2014
This course is intended to serve as an introduction to the SAS programming language for Windows in an applied, workshop environment. Emphasis is on data management and programming in a public health research setting. Topics include SAS language to compute, recode, label, and format variables as well as sort, subset, concatenate, and merge data sets. SAS statistical procedures will be used to compute univariate and bivariate summary statistics and tests, simple linear models, graphical plots, and statistical output data sets.
Introduction to SAS Programming: Read More [+]

Rules & Requirements
Prerequisites: 142 or consent of instructor

Credit Restrictions: Enrollment is limited to School of Public Health students. If space permits, others may enroll with consent of instructor.

Hours & Format
Fall and/or spring: 8 weeks - 2 hours of lecture and 3 hours of laboratory per week

Additional Details
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Lein

PB HLTH 150B Introduction to Environmental Health Sciences 3 Units
Terms offered: Summer 2018 First 6 Week Session, Fall 2017, Summer 2017 First 6 Week Session
The course will present the major human and natural activities that lead to release of hazardous materials into the environment as well as the causal links between chemical, physical, and biological hazards in the environment and their impact on human health. The basic principles of toxicology will be presented including dose-response relationships, absorption, distribution, metabolism, and excretion of chemicals. The overall role of environmental risks in the pattern of human disease, both nationally and internationally, will be covered. The engineering and policy strategies, including risk assessment, used to evaluate and control these risks will be introduced.
Introduction to Environmental Health Sciences: Read More [+]

Rules & Requirements
Prerequisites: 142 and 150A recommended. May be taken concurrently

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructors: Buehring, Dailey

Public Health Microbiology: Read Less [-]

PB HLTH 162L Public Health Microbiology Laboratory 1 Unit
Terms offered: Fall 2017, Fall 2016, Fall 2015
Laboratory to accompany 162A.
Public Health Microbiology Laboratory: Read More [+]

Rules & Requirements
Prerequisites: One year each of college-level biology and chemistry. Students must take 162A concurrently or have taken it previously

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of laboratory per week
Summer:
6 weeks - 6 hours of laboratory per week
8 weeks - 4 hours of laboratory per week

Additional Details
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Instructor: Loretz

Public Health Microbiology Laboratory: Read Less [-]
PB HLTH 170C Drinking Water and Health 3 Units
The course covers monitoring, control and regulatory policy of microbial, chemical and radiological drinking water contaminants. Additional subjects include history and iconography of safe water, communicating risks to water consumers and a bottled water versus tap water taste test as part of the discussion on aesthetic water quality parameters. A field trip to a local water treatment plant in included.

Student Learning Outcomes: By the end of this course, students will be expected to:

- Recognize the global occurrence of waterborne contaminants and related health impacts.
- Understand water quality monitoring and control of key water quality constituents.
- Appreciate the complexities of the regulatory process as it pertains to public drinking water systems in the US and abroad.
- Read and synthesize published and unpublished sources of information regarding drinking water and health. Prepare a literature review in journal submission format.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Instructor: Smith

PB HLTH 181 Poverty and Population 3 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
Globally one million more births than deaths occur every 112 hours, 90% in the poorest countries. Between 1960 and 1980, considerable attention was focused on rapid population growth. Afterwards, the attention has faded and investment in family planning evaporated. Family size among some of the poorest women is increasing. This course seeks to provide an understanding of the relationships between population growth, poverty, women’s autonomy, and health. It explores the political “fashions” underlying changing paradigms among demographers, and economists, and development specialists.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructors: Campbell, Potts, Prata

PB HLTH H195A Special Study for Honors Candidates in Public Health 3 Units
Terms offered: Fall 2017, Fall 2016, Spring 2016
Regular individual meetings with a faculty advisor culminating in a thesis at completion of H195B. H195A will concentrate primarily on researching a topic in public health. H195B will concentrate on development and writing up results in the form of a thesis. Students must enroll for both semesters of the sequence.

Rules & Requirements
Prerequisites: Senior status; 3.3 overall GPA

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of independent study per week
Summer:
6 weeks - 7.5 hours of independent study per week
8 weeks - 5.5 hours of independent study per week

Additional Details
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. This is part one of a year long series course. A provisional grade of IP (in progress) will be applied and later replaced with the final grade after completing part two of the series. Final exam not required.
PB HLTH H195B Special Study for Honors Candidates in Public Health 3 Units
Regular individual meetings with a faculty advisor culminating in a thesis at completion of H195B. H195A will concentrate primarily on researching a topic in public health. H195B will concentrate on development and writing up results in the form of a thesis. Students must enroll for both semesters of the sequence.

PB HLTH 196 Special Topics in Public Health 1 - 4 Units
Terms offered: Summer 2018 Second 6 Week Session, Spring 2018, Fall 2017
Special topics in various fields of Public Health. Topics covered will vary from semester to semester and will be announced at the beginning of each term.

PB HLTH 197 Field Study in Public Health 1 - 4 Units
Terms offered: Spring 2018, Summer 2017 8 Week Session, Spring 2017
Supervised experience relevant to specific aspects of public health in off-campus organizations. Regular individual meetings with faculty sponsor and written reports required.
