The Interdisciplinary Studies Field Major (ISF) is part of the Office of Undergraduate and Interdisciplinary Studies (UGIS) in the College of Letters and Science. It is one of many interdisciplinary programs, but only one of two (with American Studies) that requires a senior thesis of each major. ISF offers students the unique opportunity to develop an individualized cross-disciplinary Research Program that includes a Course of Study and a Senior Thesis. The Course of Study is made up of courses taken in the social sciences, the humanities, and/or the professional schools and colleges. Each student, with the help of a faculty advisor, follows a coherent Course of Study drawing on upper-division courses. Each student also, under the direction of a faculty advisor, produces a 30-40 page Senior Thesis, a sustained inquiry, based on original, cross-disciplinary research.

ISF has identified a number of Interdisciplinary Research Fields that have engendered excellent scholarship and attracted students across campus. Although ISF students may pursue other research fields identified in consultation with ISF faculty and academic advisors, the ISF Research Fields provide models and resources about scholarly interests shared by many ISF students and across campus. Research fields are dynamic bodies of knowledge that form and develop through a series of debates articulated around a given set of interdisciplinary topics, research questions, and theories. The Research Fields found on the ISF website are there to help ISF students identify their own research interests and customize their own research program and course of study.

Admission

Students must apply to the ISF Major with a well-conceived Research Program, including a proposed course of study and an intellectual justification of their proposed study. Research programs must be interdisciplinary, integrating methodological or theoretical approaches from at least three academic disciplines (departments or programs). Interdisciplinary work may be comparative, historical, regional, thematic, or problem-focused. The Research Program should not replicate an existing major. The purpose of the ISF major is to allow undergraduates to combine work across disciplines in courses and with faculty where no other structured program exists. Finally, the Research Program must be feasible, and the Senior Thesis must answer a manageable research question in a semester's hard work (ISF 190). Each student's proposed Research Program is discussed with and approved by a faculty advisor to assure feasibility, but the final responsibility lies with the student.

The ISF Major emphasizes the role of the faculty advisor and the student-advisor relationship. The nature of the major requires repeated elaboration of the proposed Research Program, Course of Study, and Senior Thesis that best combines students' individual research interests and the ISF program goals. Students are assigned an advisor upon acceptance into the major, although faculty members outside ISF may serve as advisors when appropriate, as approved by the ISF Director.

Graduate Program

There is no graduate program in Interdisciplinary Studies.
ISF 50 Interdisciplinary Perspectives on Artificial Intelligence 3 Units
Terms offered: Spring 2019
It’s hard not to open a newspaper or magazine today and see claims being made for artificial intelligence. Advocates argue that software programs will now be able to even perform creative jobs (as opposed to just routine ones) and that this is both a matter of celebration and concern. Critics argue that these claims are hyperbolic, while others argue that they are too close to reality and an indication of how much autonomy we have ceded to machines. In this course, we will pick apart all of these claims. We will ask: how have different human societies conceived of "intelligence," natural or artificial, and how has this varied with place and time?

Interdisciplinary Perspectives on Artificial Intelligence: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

ISF 60 Technology and Values 3 Units
Terms offered: Fall 2020, Spring 2018, Spring 2008
If science and technology are value-laden activities, then where exactly do the values lie? In this class, we will pick apart the black-box of science and technology and look for values not just in terms of bad actors, corruption, or "implications," but in the processes that constitute modern technoscience itself. These processes include: the ways in which researchers construct problems, solutions, facts, and artifacts; the norms, standards, stories, and patronage relations that underlie science and technology; and finally, how the future is imagined and realized. Readings will include academic and journalistic texts as well as science fiction.

Technology and Values: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

ISF 61 Moral Reasoning and Human Action: The Quest for Judgment 3 Units
Terms offered: Spring 2017, Fall 2016, Spring 2015
This is an interdisciplinary survey course that seeks to understand how we define justice, evil, and individual responsibility in modern society. In particular we are going to probe carefully how humans reflect on and practice the process of moral reasoning. We will focus on human behavior in extreme situations: war, life and death conflicts, genocide and mass killing, as well as competing conceptions of human freedom. The course has a distinctive dual purpose. On the one hand we want to encourage the learning of critical thinking skills. This includes the ability to systematically evaluate information and competing moral claims. Also, it is intended as an exposure to the interdisciplinary approach. That is, how can different perspectives illuminate the same issue? With this in mind the course draws on important work from philosophy and ethics, social psychology, jurisprudential analysis, historical-political accounts, and personal memoirs.

ISF 62 Representations of Self-Deception in the Modern World 3 Units
Terms offered: Fall 2014, Fall 2012, Spring 2012
In this course, we will utilize works in the humanities and the social sciences in order to explore a number of dimensions of self-deception in the modern world. The focus will be upon the willingness to falsify both personal life as well as one's position in the public sphere. The course will begin with an examination of the psychological dimension, emphasizing the importance of the nature of unconscious experience. In this context, we will examine how self-awareness is shaped by personal relationships, especially family arrangements. In addition, we will look at the manner in which people often engage in acts of self-deception with regard to the political realm.

ISF 100A Introduction to Social Theory and Cultural Analysis 4 Units
Terms offered: Fall 2021, Summer 2021 First 6 Week Session, Spring 2021
This course, required of all ISF majors but open to all students, provides an introduction to the works of foundational social theorists of the nineteenth century, including Karl Marx and Max Weber. Writing in what might be called the “pre disciplinary” period of the modern social sciences, their works cross the boundaries of anthropology, economics, history, political science, sociology, and are today claimed by these and other disciplines as essential texts. We will read intensively and critically from their respective works, situating their intellectual contributions in the history of social transformations wrought by industrialization and urbanization, political revolution, and the development of modern consumer society.

ISF 100B Interdisciplinary Theories of the Self and Identity 4 Units
Terms offered: Summer 2021 Second 6 Week Session, Summer 2020 Second 6 Week Session, Summer 2019 Second 6 Week Session
This course will explore how people come to develop and value the self as well their specific social identities. The course will draw on anthropology, sociology, neurobiology and philosophy to grapple with that which is most intimate yet often most opaque to us: our own selves. Yet we shall also explore the cultural limits of our unstable understanding of our individuated selves as well as the dialectic of self and other in the formation of identity.

ISF 100C Language and Identity 4 Units
Terms offered: Spring 2021, Spring 2019, Spring 2018
This course examines the role of language in the construction of social identities, and how language is tied to various forms of symbolic power at the national and international levels. Drawing on case studies from Southeast Asia, Europe, Canada, and the U.S., we will pay special attention to topics such as the legitimization of a national language, the political use of language in nation-building processes, the endangerment of indigenous languages, and processes of linguistic subordination and domination. This course will be interdisciplinary in its attempt to understand language in terms of history, politics, anthropology and sociology.

ISF 100E The Globalization of Rights, Values, and Laws in the 21st Century 4 Units
Terms offered: Summer 2020 First 6 Week Session, Summer 2019 First 6 Week Session, Summer 2018 First 6 Week Session
This interdisciplinary course is an introduction to the complex interplay of transnational values, international rights and legal institutions that increasingly govern social, cultural and geopolitical interactions in our contemporary world. Theoretical and methodological tools from the social sciences, jurisprudence, and philosophy will be applied in the analyses of these interplays. A study of rights and norms presupposes not only an understanding of the empirical evolution of rights traditions (including constitutional traditions) in a variety of global regions, but also an understanding of the theories of rights and laws that support such traditions as they are embedded in them (just war theories, peace theories, etc.) The study of rights and norms also requires an exploration of the transformations of crucial international norms and rights due to the formation of supranational institutions and organizations in the 20th century (UN, UNESCO, GO’s, etc.). The course will provide the students with an opportunity to place emerging transnational rights institutions into a historical and geopolitical framework.

ISF 100F Theorizing Modern Capitalism: Controversies and Interpretations 4 Units
Terms offered: Fall 2021, Spring 2020, Fall 2018
The focus of this course will be on the various ways the nature and trajectory of modern capitalism has been interpreted. Our stress will be on post-Marxist works of analysis. The initial focal point will be on the work of Max Weber and Joseph Schumpeter, as well as important current debates in economic history and social theory generated by their work. Both Weber and Schumpeter display a strong fascination and elaboration with the work of Marx. The way they analyze Marx is very revealing about the way contemporary analysts seek to understand the capitalist system. We will also consider a number of current efforts that look at the systemic nature of capitalism. In particular, we are interested in how economic historians now see the development of capitalism. We also want to examine the Weberian tradition in terms of the role of culture in shaping economic behavior. Debates about the nature of globalization will also be considered as well as analysis of the changing nature of work.

Consumer Society and Culture: Read Less [-]

**ISF 100I Consumer Society and Culture 4 Units**

Terms offered: Fall 2021, Fall 2020, Fall 2019

In many ways, consumption defines our lives – our identities as consumers are even more important, some would argue, our identities as workers or producers. But what are the implications of a society in which “you are what you consume?” In this class, we will address questions such as: Under what conditions does a “consumer society” develop? What does global commodity chain tell us about colonialization, global inequality, and environmental injustice? How can we shape the life cycle of basic commodities—from raw materials to iPhones—in a socially sustainable way? This course will be interdisciplinary in its attempt to understand consumer society and culture in terms of political economy, geography, history, anthropology and sociology.

ISF 100J The Social Life of Computing 4 Units
Terms offered: Spring 2021, Fall 2018, Fall 2017
In this class, we will look at computing as a social phenomenon: to see it not just as a technology that transforms but to see it as a technology that has evolved, and is being put to use, in very particular ways, by particular groups of people. We will be doing this by employing a variety of methods, primarily historical and ethnographic, oriented around a study of practices. We will pay attention to technical details but ground these technical details in social organization (a term whose meaning should become clearer and clearer as the class progresses). We will study the social organization of computing around different kinds of hardware, software, ideologies, and ideas.

ISF 100K HEALTH AND DEVELOPMENT 4 Units
Terms offered: Spring 2021, Spring 2020, Spring 2019
Development is often defined as a process of economic growth. Only recently there has been a growing disagreement about this definition and scholars argue that development should be understood as a process of improving human conditions. Health is an important indicator of human development.

It is still not conclusive whether economic growth automatically translates into better population health and whether healthy population is a precondition of economic growth because there are other factors that affect both health and development. This course will focus on this debate and examine social, political, demographic and epidemiologic determinants of health in relation to levels of economic development.

HEALTH AND DEVELOPMENT: Read More [+]

Objectives & Outcomes
Student Learning Outcomes: Upon completion of this course, students will learn about:
• the main concepts, theories and controversies linking health to broader social and economic development;
• the social, political, demographic and epidemiologic determinants of health in relation to levels of economic development;
• the effect of economic policy, globalization, climate change, and urbanization on health;
• the main components of an effective healthcare policy;
• how to compare health policies of different countries;
• how policy shapes health and development in the developed and the developing world;
• how health inequities within and between countries affect human development.

ISF 190 Senior Thesis 4 Units
Terms offered: Fall 2021, Spring 2021, Fall 2020
The ISF Senior Thesis requirement is the capstone experience and final product of the ISF major. The thesis is a sustained, original, and critical examination of a central interdisciplinary research question, developed under the guidance of the ISF 190 instructor. The thesis represents a mature synthesis of research skills, critical thinking, and competent writing. As the final product of a student's work in the major, the thesis is not the place to explore a new set of disciplines or research problems for the first time, but should develop methods of inquiry and bridge the several disciplines that students have developed in their course of study.
Senior Thesis: Read More [+]
