Overview

The Military Affairs Program, within the Division of Undergraduate and Interdisciplinary Studies (UGIS), comprises the three distinct military officer commissioning programs: Air Force Reserve Officers Training Corps (AFROTC), Army ROTC, and Naval ROTC. The purpose of the program is to integrate the educational offerings of the separate military services into the regular University curricula. In performing academic functions, the Military Affairs Program operates the same as any other program within UGIS. Its military faculty members, though nominated by the three military services, are subject to the same selection process as other UC Berkeley faculty members, and the Academic Senate's Committee on Courses must approve its curriculum. Military Affairs courses are open to all Berkeley students, as well as to students from other East Bay colleges under cross-enrollment agreements or through UC Berkeley Extension.

No undergraduate majors or minors or graduate degrees are offered in any of the following programs; they are designed to supplement a student's degree program.

Aerospace Studies (Air Force ROTC)

The Department of Aerospace Studies (AS) provides instruction in military history and heritage, leadership principles, and national security. While the Aerospace Studies curriculum is designed to develop aspiring leaders in the US Air and Space Force, AS courses are open to all students and do not require enrollment in AFROTC. The mission of AFROTC is to “develop leaders of character for tomorrow’s Air and Space Force.” As such, AS courses emphasize student participation and involvement. Courses are conducted as seminars and require active student discussion. AS courses are presented in increasing topic depth and complexity as follows (note, AS courses do not pre-requisite requirements):

- **Freshman**: Fall – AEROSP 1A, Spring - AEROSP 1B (1 credit hour each)
- **Sophomore**: Fall - AEROSP 2A, Spring - AEROSP 2B (1 credit hour each)
- **Junior**: Fall - MIL AFF 135A, Spring - MIL AFF 135B (3 credit hours each)
- **Senior**: Fall – MIL AFF 145A, Spring – MIL AFF 145B (3 credit hours each)

In addition to Berkeley students, AS courses are available to students from 38 Bay Area colleges and universities through our crosstown enrollment program (see airforcerotc.berkeley.edu (http://guide.berkeley.edu/undergraduate/departments/military-affairs/airforcerotc.berkeley.edu/) for a list of participating crosstown schools).

The Department of Aerospace Studies provides interested students the opportunity to become a General Military Candidate in the Air Force Reserve Officers’ Training Corps (AFROTC). Enrollment in AFROTC transitions an AS student into an AFROTC cadet, which permits a cadet to compete for a commission as a Second Lieutenant in the United States Air Force or the United States Space Force. To become an active cadet at Detachment 085, each eligible CB or crosstown student must have at least three full academic years remaining in their bachelor's degree program; under certain circumstances, a student may join the AFROTC program while simultaneously completing a graduate degree program.

Developing a leader's character requires more than academics. In addition to the AS courses, active cadets are required to attend:

- A weekly 2-hour leadership laboratory (LLAB) that is restricted to, and mandatory for all AFROTC cadets; LLAB consists of cadets organizing, leading and managing their own cadet military unit while accomplishing leadership training objectives.
- At least two 1-hour, cadet-led physical fitness sessions.
- Complete a military physical fitness assessment each term.

Active cadets further their leadership development through participation in volunteer projects, professional leadership organizations, professional development training, military internships, shadow programs, and support of community outreach. AFROTC cadets are eligible to compete for scholarships, which cover the costs of tuition, books, and fees. In addition, a $300-$350 monthly allowance is paid to scholarship cadets; a $450-$500 monthly allowance paid to all cadets in their last two years in the AFROTC program.

For more information on becoming a leader in AFROTC and a future officer in the US Air or Space Force, see our website at see airforcerotc.berkeley.edu (http://airforcerotc.berkeley.edu/).

Military Science (Army ROTC)

The Army Officer Education Program offers a variety of credit courses focused on the study of the military as an institution, adventure training opportunities, and a program of laboratory work in practical military skills. The program provides an opportunity to examine service in the Army while earning a baccalaureate degree. A student who completes the program may earn a commission in the Regular Army, Army Reserve, or National Guard.

Graduate or undergraduate students can complete the Military Science requirements through a four-year, three-year, or two-year program. The four-year and three-year programs involve the Basic and Advanced Courses; the two-year program involves only the Advanced Course. The Army Reserve Officers’ Training Course (ROTC) Basic Course consists of two distinct components: the classroom introduction to the Army profession and officership of the Military Science and Leadership (MSL) I year, and the experiential examination of leadership, decision-making, and group process of the MSL-II year. Both Basic Course years are designed to enhance student interest in ROTC and the Army.

MSL-I lessons provide an overview of the key subjects of pre-commissioning, which will be treated in much greater depth in the Advanced Course. The MSL-II year places cadets in a wide variety of group exercises designed to emphasize various professional leadership competencies and insights. These events are held both inside the classroom and in outdoor settings. The instructor, acting as facilitator, helps guide student processing, or after-action reviews, of the events to derive the leadership, group dynamics, and problem-solving lessons that the exercises offer. In addition to military skills, practical "life skills" are emphasized throughout the two years.

Cadets may also be required to attend Basic Camp, a four-week summer ROTC training experience at Fort Knox, Kentucky. By the end of the Basic Course, cadets should possess a basic understanding of the unique aspects of the officer corps, individual fitness, and healthy.
lifestyle. The lessons are designed to maximize cadet participation, inspire intellectual curiosity, and stimulate self-study. Upon completion of the course, cadets are eligible to enter the Advanced Course.

The Army ROTC Advanced Course is composed of four courses, MIL SCI 131, MIL SCI 132, MIL SCI 141, and MIL SCI 142, and Advanced Camp, which is a mandatory four-week leader development training course conducted during the summer at Fort Knox, Kentucky.

The Advanced Course is designed to teach all knowledge, skills, and attitudes for commissioning as a new second lieutenant, and to establish a sound foundation for a career as a commissioned Army officer. This approach is taken because the Advanced Course comprises the minimum curriculum that an individual must complete in order to be commissioned. Advanced Course lessons are carefully sequenced and linked and are progressive in their treatment of key officer knowledge and competencies. Students are encouraged to synthesize lessons to form broader perspectives, deeper insights, and more robust problem-solving abilities by the use of earlier lessons. Topics are designed to facilitate entry into military service at the completion of the MIL SCI 142 term.

The two-year program begins with direct placement in the Advanced Course. It is available to undergraduate or graduate students, who have completed any of the following: enlisted military service, completion of ROTC Basic Camp, or three years of Junior ROTC. Students must have at least two academic years left until completion of their degree when they enter the Advanced Course.

**Naval Science (Naval ROTC)**

The Department of Naval Science offers a program of instruction for men and women leading to commissions in either the US Navy or US Marine Corps. Naval Science courses are open to all university students or, subject to approval, may be taken through UC Berkeley Extension.

Students enrolled in the Naval ROTC program will normally complete the following courses during their first two years as part of their overall academic load: NAV SCI 1, NAV SCI 2, NAV SCI 3, and NAV SCI 10. Navy Option students will then complete the following courses during their junior and senior years: NAV SCI 12A, NAV SCI 12B, NAV SCI 401, and NAV SCI 412. Marine Option students will participate in a Marine seminar and complete the Fundamentals of Maneuver Warfare (NAV SCI 154) and Evolution of Warfare (NAV SCI 20). All Navy Option scholarship students must complete one year of calculus and one year of calculus-based physics by the end of their sophomore and junior years respectively.

Students are also required to attend weekly professional development laboratories each Thursday. These three-hour sessions offer the student midshipman an active role in the management and direction of the midshipman battalion and provide time for the midshipmen to explore professional topics. Student midshipmen also participate in four-to-six week summer training cruises throughout the world. While at sea and serving alongside Sailors and Officers, they apply theoretical aspects of their education and training to the real-world environment of the U.S. Navy. Marine Option midshipmen attend Marine Corps Officer Candidates School in the summer between their junior and senior year.

To learn more about various NROTC scholarship opportunities, selection criteria, and the application process, please visit nrotc.navy.mil/scholarships (http://www.nrotc.navy.mil/scholarships.html).

AEROSPC 2A The Evolution of Air and Space Power 1 Unit

Terms offered: Spring 2022, Fall 2021, Spring 2021

This course examines the general aspects of air/space power through historical study and analysis, providing students with knowledge of the capabilities, functions, and doctrinal employment of air/space forces. It covers the period from the first balloons and dirigibles to the employment of air/space power during the Cold War, utilizing historical/operational examples to highlight the development of USAF core competencies, capabilities, and missions that underpin the evolution of today’s USAF.

This course emphasizes oral/written communication skills development. AFROTC cadets must also attend Leadership Lab, a weekly lab providing practical experience in areas like customs and courtesies, health/physical fitness, and drill and ceremonies.

AEROSPC 2B The Evolution of Air and Space Power 1 Unit

Terms offered: Spring 2022, Spring 2021, Spring 2020

This course examines the general aspects of air/space power through a historical perspective, as well as fundamental truths associated with war (e.g., principles of war and tenets of air/space power). As a whole, this course provides students with a knowledge level understanding for the element and employment of air/space power, from an institutional, doctrinal, and historical perspective. Students will also conduct writing and briefing assignments to meet Air Force communication skills requirements. Additionally, AFROTC cadets must attend Leadership Lab, a weekly lab that provides practical experience in areas like customs and courtesies, health/physical fitness, and drill and ceremonies.

AEROSPC 100 Leadership Laboratory 0.0 Units

Terms offered: Spring 2022, Fall 2021, Spring 2021

Leadership Lab (LLAB) represents the hands-on portion of the Aerospace Studies courses. It presents a dynamic and integrated grouping of leadership developmental activities. LLAB is a student planned, organized, and executed practicum intended to maximize cadet leadership experience and preparation for easy transition to their active duty assignments. It is conducted under the supervision of AFROTC cadre. The course focuses on the leadership experiences of senior and junior cadets and provides training in basic military knowledge and skills to underclass cadets. Cadets are trained on proper uniform wear, grooming and appearance requirements, physical fitness, knowledge of military customs and courtesies, and military drill and ceremony.

Military Affairs

MIL AFF 1 Military Physical Fitness 1 Unit
Terms offered: Spring 2022, Fall 2021, Spring 2021
This course teaches the fundamentals of physical fitness employed by the U.S. military to condition ROTC cadets for the physical demands they will face as military officers. The course consists of rigorous physical training under the supervision of military officers and noncommissioned officers. The goal of this course is to not only enhance one’s level of physical fitness, but also to develop leadership qualities in the conduct and planning of physical fitness training. Physical training will include, but is not limited to: running up to five miles, team sports, aerobics, and other activities.

MIL AFF 180 Philosophy of Leadership 3 Units
Terms offered: Fall 2021, Spring 2021, Fall 2020
What is leadership? Does leadership remain fundamentally the same when you change scale or purpose, or does it in some way become fundamentally different? What is good leadership? Are the virtues of leadership universal and unchanging, or are they relative to your historical circumstances? Who can be a leader? Can leadership be taught, or is it something you are born with? How do we gain knowledge about leadership? Can we learn leadership through logic, reasoning from fundamental ideas, or do we require experimentation and empirical evidence? These are some of the questions we will be investigating through the close reading of classic texts on the philosophy of leadership, such as Plato’s Statesman and Machiavelli’s The Prince.

NAV SCI 400E Naval Laboratory 0.0 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
Emphasis is placed on professional training not of an academic nature. The laboratory is intended for topics such as drill and ceremonies, physical fitness and swimming testing, cruise preparation, cruise evaluation, sail training, safety awareness, preparation for commissioning, personal finances, insurance, and applied exercises in naval ship systems, navigation, naval operations, naval administration, and military justice. Other topics and special briefings will be conducted as determined by the Chief of Naval Education and Training or the Professor of Naval Science.

Rules & Requirements
Prerequisites: Consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of laboratory per week
Additional Details
Subject/Course Level: Naval Science/Other professional
Grading: Offered for pass/not pass grade only.
NAV SCI 401 Naval Ship Systems II 3 Units
Terms offered: Fall 2021, Fall 2020, Fall 2019
An introduction to the physical theory of acoustic and electromagnetic wave generation and propagation; the design and use of electronic, electromechanical, and pneumatic systems; and the combination of these systems to perform detection and analysis of objects sharing and traversing common environments.

NAV SCI 412 Leadership and Ethics 3 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
This course is the capstone leadership course. It is intended to provide the ethical foundation and tools required for success as a leader of a diverse work force, often under circumstances of substantial stress. The course is divided between the art of leadership and the technical aspects of integrating personnel development with the management of resources, although the emphasis is on leadership. It is designed to be given as a seminar or lecture/discussion in which principles, concepts, and concrete subjects are presented, discussed, and debated.
