Public Health (PB HLTH)

Courses

PB HLTH 14 Healthy People: Introduction to Health Promotion 4 Units
Terms offered: Spring 2016, Spring 2015, Spring 2014
Introduction to personal and community health, drawing on physical and social sciences. Specific areas include stress, alcohol and drugs, nutrition, exercise, the environment, communication, and sexuality. Readings, lectures, and discussions explore key issues for students and examine those issues in the context of contemporary American society. Public health approaches to disease prevention and health promotion are explored for each topic.

PB HLTH 15 Introduction to Global Health Equity 3 Units
Terms offered: Spring 2019, Spring 2018, Spring 2017
This seminar provides an overview of the intersection between global health and social justice, with a specific focus on the ways in which inequity, specifically the conditions that lead to poverty, disproportionately affect health outcomes. Students will learn about the historical and theoretical underpinnings of global health, how social determinants affect medical outcomes and health policy, the principles of international law and health economics, and the structure of health delivery models. In the process, students will engage in topics related to social factors that impact health, including class, race, gender, and poverty. Class discussions will address contemporary global health priorities through the lens of human rights activism.

PB HLTH 24 Freshman Seminar in Public Health 1 Unit
Terms offered: Spring 2023, Spring 2022, Fall 2021
Seminar limited to 15 freshmen led by senior faculty on broad topics in public health such as financing health care, promoting preventive behavior, controlling major public health problems such as world hunger, AIDS, drugs, and the population explosion.

PB HLTH 84 Sophomore Seminar 1 or 2 Units
Terms offered: Spring 2022, Spring 2020, Spring 2019
Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.

PB HLTH 84 Sophomore Seminar 1 or 2 Units
Terms offered: Spring 2022, Spring 2020, Spring 2019
Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.
PB HLTH 98 Directed Group Study 1 - 4 Units
Terms offered: Spring 2016, Fall 2015, Spring 2015
Directed Group Study: Read More [+]

Rules & Requirements
Credit Restrictions: Enrollment is restricted; see the Introduction to Courses and Curricula section of this catalog.
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1-4 hours of directed group study per week

Additional Details
Subject/Course Level: Public Health/Undergraduate

PB HLTH 99 Supervised Independent Study 1 - 4 Units
Terms offered: Spring 2016, Fall 2015, Spring 2015
Supervised Independent Study: Read More [+]

Rules & Requirements
Prerequisites: Consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 1-4 hours of independent study per week
Summer:
6 weeks - 2.5-10 hours of independent study per week
8 weeks - 1.5-7.5 hours of independent study per week
10 weeks - 1.5-6 hours of independent study per week

Additional Details
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Offered for pass/not pass grade only. Final exam not required.

PB HLTH 101 A Sustainable World: Challenges and Opportunities 3 Units
Terms offered: Spring 2023, Spring 2022, Fall 2021
Students now attending Berkeley will confront an extremely different set of challenges than the current faculty experienced. Economic growth cannot continue exponentially in a finite world. Human activity and human numbers threaten the possibility of irreversible damage to the fragile biosphere on which all life depends. In this 3-unit interdisciplinary course, students will focus on finding creative solutions to the problems faced by their generation. Each week, experts will discuss problems and solutions concerning sustainability and climate change that they’re passionate about. Topics include energy consumption, food security, population growth and family planning, migration, climate change, policy, and governance.

A Sustainable World: Challenges and Opportunities: Read More [+]

Objectives & Outcomes
Course Objectives:
Find ways to roll back the many political, social, and cultural barriers that stand in the way of developing needed, evidence-based policies and investments.
Identify those behaviors that must change, those public policies that must be put in place and the investments that must be made in order to move the current pattern of unsustainable economic activity to a biologically sustainable one.
Learn to appraise critically different and sometimes conflicting sources of information.
Propose solutions to complex interdisciplinary problems that draw on politics, economics, and philosophy and other social sciences as well as the hard sciences.
Understand how adverse trends- for example in global warming and population growth- can interact in adverse ways, sometimes with considerable rapidity.
Understand that the continued exponential growth in energy consumption and human population growth is unsustainable.
Understand the current rate of destruction of natural resources and biodiversity.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Alternate method of final assessment during regularly scheduled final exam group (e.g., presentation, final project, etc.).
Instructors: Maus, van der Walt

PB HLTH 104A Health Promotion in a College Setting 2 Units
Terms offered: Fall 2016, Fall 2015, Fall 2014
Topics include health promotion, medical self-care, and delivery of health care service. Through a combined theory and practice approach, topics are covered as they apply to the campus community. The course is divided into three sections corresponding to particular campus health field experiences in which students may be involved.
Health Promotion in a College Setting: Read More [+]

Rules & Requirements
Prerequisites: Consent of instructor
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1.5 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Offered for pass/not pass grade only. Final exam not required.

PB HLTH 107 Violence, Social Justice, and Public Health 2 Units
Terms offered: Summer 2023 Second 6 Week Session, Summer 2021 First 6 Week Session, Summer 2020 First 6 Week Session
This course addresses violence as a public health issue, using an interdisciplinary public health approach to enable undergraduate students to explore and analyze violence from personal, social, community and political perspectives. Students will learn to apply public health strategies to identify causes of violence and develop practical community-based plans to prevent violence and promote safety. This course will examine violence through the lens of the college campus, paying particular attention to the types of violence more commonly seen on, or associated with, collegiate life, and will include a term paper component.
Violence, Social Justice, and Public Health: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week
Summer: 6 weeks - 6 hours of lecture per week

Violence, Social Justice, and Public Health: Read Less [-]
PB HLTH W108 Women’s Health, Gender And Empowerment 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
The course will provide core knowledge and skills from several disciplines on how to improve women’s health and well-being globally, and it will follow a life course framework. It aims to expand students’ understanding of the interconnected factors that influence women’s health and empowerment - including foundations of sexual and reproductive health, economic development, political frameworks and global reproductive rights, demographic and social changes, basic principles of empowerment theory, educational opportunities, and efforts to ensure gender equity.

Objectives & Outcomes

Course Objectives:
A. [KNOWLEDGE]: To expand students’ understanding of the interconnected cultural, demographic, social, and economic factors that influence women’s health and empowerment globally.
B. [KNOWLEDGE]: To gain knowledge of the historical and present-day contexts of politics, policies, and laws related to women’s health outcomes, human rights, sexual and reproductive rights, and gender inequities.
C. [SKILLS]: To critically engage with contrasting perspectives and changing paradigms about women’s health and empowerment among epidemiologists, clinicians, public health experts, demographers, economists, human rights activists, and development specialists.
D. [SKILLS]: Assess policies, development frameworks and case studies of interventions designed to improve women’s health and empowerment in differing cultural and national contexts with specific attention to gender norms.

Student Learning Outcomes:
Analyze case studies applying the relevant historical context of politics, policies, and laws related to women’s health and human rights.
Analyze the contrasting perspectives and changing paradigms among epidemiologists, public health experts, demographers, economists, human rights activists and development specialists related to women’s health and empowerment
Assess the impact of women’s health on advances in other sectors including child health, education, economic development, and social stability
Compare macro level political, institutional, and structural factors that influence women’s health and empowerment in relation to local, cultural, and regional contexts
Critically examine how gender and women’s empowerment is addressed in the Sustainable Development Goals and other development frameworks
Evaluate case studies of interventions designed to improve women’s health and empowerment in differing cultural and national contexts and recommend improvements
Examine how girls’ education contributes to individual, community, and national development.
Explain the ways in which social, economic, and cultural factors can both promote and impede women’s and girls’ health.
Identify the major institutions and non-governmental organizations that influence women’s health and empowerment and suitable approaches for implementing interventions to ensure gender equity
Identify and analyze gender inequities in health care needs and access to care.

Hours & Format
Fall and/or spring: 15 weeks - 1.5 hours of web-based lecture and 1 hour of web-based discussion per week

Additional Details
Subject/Course Level: Public Health/Undergraduate
Credit Restrictions: Students who complete PH N112 receive no credit for completing PH 112
Instructors: Hemmerling, Decker, Mindry

PB HLTH 112 Global Health: A Multidisciplinary Examination 4 Units
Terms offered: Summer 2017 First 6 Week Session, Spring 2016, Spring 2015
This course examines health at the individual and community/global level by examining the interplay of many factors, including the legal, social, political, and physical environments; economic forces; access to food, safe water, sanitation, and affordable preventive/medical care; nutrition; cultural beliefs and human behaviors; and religion; among others. Students will be expected to read, understand, and use advanced materials from diverse disciplines. Class accompanied by case-based discussions.

Rules & Requirements

Credit Restrictions: Students who complete PH N112 receive no credit for completing PH 112

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week
Summer: 6 weeks - 9 hours of lecture and 3 hours of discussion per week

Additional Details

Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructors: Krishnan, Reingold

Global Health: A Multidisciplinary Examination: Read Less [-]
PB HLTH N112 Global Health: A Multidisciplinary Examination 4 Units
Terms offered: Summer 2023 First 6 Week Session, Summer 2022 First 6 Week Session, Summer 2021 First 6 Week Session
This course examines health at the individual and community/global level by examining the interplay of many factors, including the legal, social, political, and physical environments; economic forces; access to food, safe water, sanitation, and affordable preventive/medical care; nutrition; cultural beliefs and human behaviors; and religion; among others. Students will be expected to read, understand, and use advanced materials from diverse disciplines. Class accompanied by case-based discussions.
This class is the Summer Session version of PH 112; same units and content, increased lecture and discussion hours.
Global Health: A Multidisciplinary Examination:

Rules & Requirements
Credit Restrictions: Students who complete PH 112 receive no credit for completing PH N112.

Hours & Format
Summer: 6 weeks - 6 hours of lecture and 6 hours of discussion per week

Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructors: Reingold, Colford

Introduction to Global Health Equity:

Objectives & Outcomes
Student Learning Outcomes:
- Critically analyze and critique key grassroots global health advocacy efforts and models
- Formulate comprehensive and equitable policy recommendations on global health cases
- Think critically about and articulate the history, pathology, and causation of contemporary global health inequity
- Utilize basic research methods and work collaboratively in a team setting to complete a group case project

Rules & Requirements
Credit Restrictions: Students will receive no credit for PB HLTH 115 after completing PB HLTH 15. A deficient grade in PB HLTH 115 may be removed by taking PB HLTH 15.
Repeat rules: Course may be repeated for credit with advisor consent.

Hours & Format
Summer: 6 weeks - 4 hours of lecture and 4 hours of discussion per week

Additional Details
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

Introduction to Global Health Equity:
PB HLTH 116 Seminar on Social, Political, and Ethical Issues in Health and Medicine 3 Units
Terms offered: Spring 2023, Fall 2022, Spring 2022
This course offers an introduction to issues and perspectives related to health and medicine. Guest lecturers speak about the week’s topic, which can include a variety of topics such as public health, violence, chronic illnesses, environmental health, and health care economics. Speakers share their first-hand experiences in their fields, discuss current issues, debate ethical dilemmas, and pose and answer questions. During the weekly discussion sections, students delve deeper into the issues, not only exploring and perhaps questioning their own thoughts and beliefs, but also learning from the experiences and perspectives of their fellow students.

Seminar on Social, Political, and Ethical Issues in Health and Medicine: Read More [+]

Objectives & Outcomes

Course Objectives: Consider various socio-economic, ethical, political, and social justice issues in health and medicine from an interdisciplinary perspective, and learn something new. This course will help students form a more comprehensive picture of what public health is and how various levels interact to impact population health. In the process, students will become better acquainted with their own beliefs, as they pertain to the issues discussed, and will learn how to productively engage in discussion with others who may or may not share these same beliefs.

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Public Health/Undergraduate

Grading/Final exam status: Offered for pass/not pass grade only. Final exam required.

Instructors: Francis, Keller

PB HLTH C117 Introduction to Global Health Disparities Research 2 Units
Terms offered: Spring 2020, Spring 2019, Spring 2018
This course prepares students to conduct a 10-week global health research project in a low or middle-income country (LMIC); provides a background in global health, emphasizing infectious disease research, international research ethics, and the conduct of health research in low-resource settings. Leads students through the process of preparing for, conducting, and completing a short-term research project, with modules focused on cultural communication, the role and pace of research in these other countries, presentation preparation, project development, and troubleshooting skills; gaining perspective into the relationship between global health and health disparities in the USA.

Introduction to Global Health Disparities Research: Read Less [-]
PB HLTH 118 Global Nutrition 3 Units
Terms offered: Summer 2023 First 6 Week Session, Summer 2022 First 6 Week Session, Summer 2021 First 6 Week Session
We will focus on low- and middle-income countries because they experience the greatest burden of malnutrition, and because they face a unique context of limited financial and government resources. In this course, we will discuss the effects of nutrition throughout the lifecycle in pregnancy, infancy, childhood, and adulthood. We will focus on nutrition broadly including issues of undernutrition, micronutrient deficiencies, and obesity. We will also analyze and evaluate actions taken to ameliorate the major nutritional problems facing vulnerable populations in low- and middle-income countries.

Global Nutrition: Read More [+]

Objectives & Outcomes

Course Objectives:
1. Describe and interpret the prevalence and trends of public health nutrition issues faced by mothers and children living in low- and middle-income countries, ranging from undernutrition to overweight and obesity.
2. Discuss the political, environmental, cultural, and socioeconomic factors underlying a wide range of nutrition issues in low- and middle-income countries and understand how interventions affect these factors.
3. Identify the ways in which historical, social, cultural, economic, commercial, and institutional factors promote or act as barriers to the design and implementation of agriculture, food, and nutrition policies and programs, and the ways in which these policies and programs affect health and other outcomes.
4. Integrate knowledge of nutritional issues and policy to analyze methods through which stakeholder groups affect the design and implementation of food and nutrition programs and policies.

Student Learning Outcomes:
- Ability to conduct a literature review of a specific public health nutritional problem using reputable sources and communicate important findings to various audiences
- Ability to understand how pressing public health nutritional problems in low- or middle-income contexts affect different stakeholder groups;
- Critical analysis of issues in public health nutrition relating to the context of a low- or middle-income country;
- Understanding of the biological and social roles of nutrition in health through the life cycle, particularly as they relate to issues of poor nutrition in a global context;

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week
Summer: 6 weeks - 8 hours of lecture per week

Additional Details

Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Instructor: Fernald

Global Nutrition: Read Less [-]

PB HLTH 124 Health Care and Public Health Management 3 Units
Terms offered: Not yet offered
Examines the management of health care and public health organizations and covers organizational design, human resources, leadership, and change management competencies. Introduces management tools and techniques for monitoring and managing change within organizations. Emphasizes how leaders use data to solve problems. Case studies emphasize how to manage human relations and demands from the external environment.

Health Care and Public Health Management: Read More [+]

Objectives & Outcomes

Student Learning Outcomes:

a) Describe key priorities and challenges for health care and public health organizational leaders.
b) Analyze health care and public health operational, financial, and quality of care data to inform organizational decision-making.
c) Assess the tradeoffs of diverse organizational structures and designs, including divisional, functional, and matrix designs.
d) Apply the enabling conditions for effective teams to design and facilitate high performing teams.
e) Describe different leadership theories and how they apply to leading health care and public health organizations.
f) Formulate strategies for the effective recruitment, engagement, and integration of effective governing and advisory boards.
g) Analyze the key steps involved in organizational change management.
h) Apply performance improvement and operational efficiency methods to health care and public health organizational performance problems.

Rules & Requirements

Prerequisites: Junior or senior status
Repeat rules: Course may be repeated for credit with instructor consent.

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Instructor: Rodriguez

Health Care and Public Health Management: Read Less [-]
PB HLTH 126 Health Economics and Public Policy 3 Units
Terms offered: Spring 2023, Spring 2021, Spring 2020
This course focuses on a selected set of the major health policy issues and uses economics to uncover and better understand the issues. The course examines the scope for government intervention in health markets.

Prerequisites: Public Health major or consent of instructor

Rules & Requirements

Health Economics and Public Policy: Read More [+]

PB HLTH 129 The Aging Human Brain 3 Units
Terms offered: Fall 2021, Fall 2019, Fall 2017
The course will survey the field of the human brain, with introductory lectures on the concepts of aging, and brief surveys of normal neuroanatomy, neurophysiology, neurochemistry, and neuropsychology as well as methods such as imaging, epidemiology, and pathology. The neurobiological changes associated with aging will be covered from the same perspectives: neuropsychology, anatomy, biochemistry, and physiology. Major neurological diseases of aging including Alzheimer’s and Parkinson’s disease will be covered, as will compensatory mechanisms, neuroendocrine changes with aging, depression and aging, epidemiology of aging, and risk factors for decline.

Prerequisites: PH 150D: Introduction to Health Policy and Management

Rules & Requirements

Health Economics and Public Policy: Read Less [-]

PB HLTH 130 Advanced Health Policy 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
This course will give you the opportunity to build upon your understanding of the organization, financing and current policy issues of the US health care delivery system obtained in PH 150D. In this course you will become engaged health policy analysts, applying policy making tools (e.g., policy memos/briefs, legislative analysis, regulatory comments, media advocacy, public testimony) to actual health issues and problems. Through individual and group work, you will draw upon both verbal and written communication skills to effectuate health policy change.

Prerequisites: PH 150D: Introduction to Health Policy and Management

Rules & Requirements

Advanced Health Policy: Read More [+]

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Summer: 8 weeks - 6 hours of lecture and 2 hours of discussion per week

Instructor: Fulton

Grading/Final exam status: Letter grade. Final exam required.

Additional Details

Subject/Course Level: Public Health/Undergraduate

Instructor: Flagg

Grading/Final exam status: Letter. Alternative to final exam.

Advanced Health Policy: Read Less [-]
PB HLTH 132 Artificial Intelligence for Health and Healthcare 3 Units
Terms offered: Fall 2021
Over the coming decades, data and algorithms will transform medicine and our health care system. Whether you plan to be a doctor, an algorithm developer, or a manager or policy maker in the health sector, this course will help you understand: (1) the tremendous upside of artificial intelligence for health, and (2) how well-intentioned efforts to apply these tools can do harm. The course will be quantitative (e.g., technical readings; problem sets requiring statistical software), and is designed for students with at least intermediate coursework in statistics, economics, computer science, etc.

Artificial Intelligence for Health and Healthcare: Read More [+]

Objectives & Outcomes

Course Objectives: Finally, students will learn to identify new unsolved problems where data and algorithms could improve health and medicine, and start to think about developing solutions. Students will also come away with a list of several ‘red flags’ – unique challenges of health data that make it difficult to apply algorithms that have been successful in other fields. This will help them become better and more critical consumers of literature and news in this area. Students will learn about several problems in health care where artificial intelligence is helping doctors and policy makers.

Rules & Requirements

Prerequisites: An intermediate coursework in statistics (e.g., C100), economics (e.g., 100A/B), computer science (e.g., CS88), etc. is recommended

Hours & Format

Fall and/or spring: 15 weeks - 1.5 hours of lecture and 1.5 hours of discussion per week

Additional Details

Subject/Course Level: Public Health/Undergraduate

Grading/Final exam status: Letter grade. Alternative to final exam.

Instructor: Obermeyer

Artificial Intelligence for Health and Healthcare: Read Less [-]

PB HLTH 141 Introduction to Biostatistics 5 Units
Terms offered: Summer 2017 Second 6 Week Session, Summer 2016 10 Week Session, Summer 2016 Second 6 Week Session
An intensive introductory course in statistical methods used in applied research. Emphasis on principles of statistical reasoning, underlying assumptions, and careful interpretation of results. Topics covered: descriptive statistics, graphical displays of data, introduction to probability, expectations and variance of random variables, confidence intervals and tests for means, differences of means, proportions, differences of proportions, chi-square tests for categorical variables, regression and multiple regression, an introduction to analysis of variance. Statistical software will be used to supplement hand calculation. Students who successfully complete Public Health 141 are prepared to continue their biostatistics course work in 200-level courses. With the approval of their degree program, MPH students may use Public Health 141 to fulfill the biostatistics course requirement (contact program manager for approval). Public Health 141 also fulfills the biostatistics course requirement for the Public Health Undergraduate Major.

PB HLTH 144A Introduction to SAS Programming 2 Units
Terms offered: Spring 2016, Spring 2015, Spring 2014
This course is intended to serve as an introduction to the SAS programming language for Windows in an applied, workshop environment. Emphasis is on data management and programming in a public health research setting. Topics include SAS language to compute, recode, label, and format variables as well as sort, subset, concatenate, and merge data sets. SAS statistical procedures will be used to compute univariate and bivariate summary statistics and tests, simple linear models, graphical plots, and statistical output data sets.
Introduction to SAS Programming: Read More [+]

Rules & Requirements

Prerequisites: 142 or consent of instructor
Credit Restrictions: This course (or equivalent) is required for students who plan to enroll in 251, Practicum in Epidemiological Methods. Enrollment is limited to School of Public Health students. If space permits, others may enroll with consent of instructor.

Hours & Format

Fall and/or spring: 8 weeks - 2 hours of lecture and 3 hours of laboratory per week

Introduction to Epidemiology and Human Disease: Read Less [-]
PB HLTH 150B Human Health and the Environment in a Changing World 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
The course will present the major human and natural activities that lead to release of hazardous materials into the environment as well as the causal links between chemical, physical, and biological hazards in the environment and their impact on human health. The basic principles of toxicology will be presented including dose-response relationships, absorption, distribution, metabolism, and excretion of chemicals. The overall role of environmental risks in the pattern of human disease, both nationally and internationally, will be covered. The engineering and policy strategies, including risk assessment, used to evaluate and control these risks will be introduced.

PB HLTH 150D Introduction to Health Policy and Management 3 Units
Terms offered: Summer 2023 First 6 Week Session, Fall 2022, Summer 2022 First 6 Week Session
This course is intended to introduce students to health policy making and health care organizations in the United States. Students will be introduced to concepts from public policy, economics, organizational behavior, and political science. Students will also be introduced to current issues in U.S. health policy and the present organization of the U.S. health care system.

Objectives & Outcomes
Course Objectives:
1. Provide an overview of the structure and financing of the U.S. healthcare system at the end of the first half of the course as measured by the midterm exam.
   a. Compare the US healthcare system to the systems in other developed countries (as measured on the final exam).
2. Identify the principal functions of health insurance, the structure of public and private health insurance plans, and trends in enrollment and expenditures by the end of the first half of the course as measured by the midterm exam.
3. Describe the involvement and policy goals of different stakeholders in the U.S. healthcare system measured by the midterm exam, article presentations and demonstrated in the course paper.
4. Explain the health care policy making process in the U.S. and the respective roles of government and markets in this process. Understand the legal, ethical, economic, and regulatory dimensions of health care. To be measured by the final exam.
5. Demonstrate critical thinking and ability to analyze health policies as demonstrated in the final term paper.
6. Explain the socio-economic behavioral, biological, environmental, and other factors that impact human health and contribute to health disparities, as assessed in the final exam.
   a. Comprehend the impact of structural racism on health and health care
7. Explain the innovation and adaptation cycle in biomedical and health information technologies in the U.S health care system as measured in the final exam.
8. Recognize the structural racism that exists within our healthcare system; consider each person’s role in perpetuating the status quo in order to move towards breaking it down.
9. Apply the concepts learned to understand health/health care crisis (i.e., COVID-19)

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week
Summer:
6 weeks - 8 hours of lecture and 2 hours of discussion per week
8 weeks - 6 hours of lecture and 2 hours of discussion per week
PB HLTH 150E Introduction to Community Health and Human Development 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
This course will consist of a survey of the major social, cultural, and bio-behavioral patterns of health and well-being among individuals, families, neighborhoods, and communities. The course also will address the design, implementation, and evaluation of leading social and behavioral interventions and social policies designed to improve community and population health. This course will satisfy one of the core requirements for the undergraduate major in public health.

Introduction to Community Health and Human Development: Read More [+]

Rules & Requirements

Prerequisites: Third or fourth undergraduate standing or consent of instructor

Requirements this course satisfies: Satisfies the American Cultures requirement

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Public Health/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

Instructor: Corburn

PB HLTH N150B Human Health and the Environment in a Changing World 3 Units
Terms offered: Summer 2023 First 6 Week Session, Summer 2022 First 6 Week Session, Summer 2021 First 6 Week Session
The course will present the major human and natural activities that lead to release of hazardous materials into the environment as well as the causal links between chemical, physical, and biological hazards in the environment and their impact on human health. The basic principles of toxicology, microbial ecology, GIS, exposure assessment and risk assessment among others, are covered. The overall role of environmental risks in the pattern of human disease, both nationally and internationally, are covered. The policy strategies, used to evaluate and control these risks are discussed.

Human Health and the Environment in a Changing World: Read More [+]

Objectives & Outcomes

Student Learning Outcomes:
1. Ability to describe the basic model of environmental health.
2. Ability to demonstrate an understanding of environmental health sciences (EHS) core areas: toxicology, microbial ecology, GIS, exposure assessment, risk assessment and environmental epidemiology at a basic level.
3. Demonstration of oral and written communication skills in the context of environmental health sciences.
4. Ability to describe methods used to mitigate or control adverse health impacts from environmental hazards.
5. Demonstrate proficiency in finding primary literature sources in search engines such PubMed and WebofScience and manage citations using Zotero or equivalent software.

Rules & Requirements

Credit Restrictions: Students will receive no credit for PB HLTH N150B after completing PB HLTH 150B, or PB HLTH 150. A deficient grade in PB HLTH N150B may be removed by taking PB HLTH 150B, or PB HLTH 150.

Hours & Format

Summer: 6 weeks - 8 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Public Health/Undergraduate

Grading/Final exam status: Letter grade. Alternative to final exam.

Instructor: Smith

Human Health and the Environment in a Changing World: Read Less [-]
PB HLTH 155A Senior Research Seminar in Public Health 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This applied course will help students understand how to conduct and interpret research in human health and disease, building on knowledge of epidemiology and biostatistics. The course will provide skills in: critically reading the literature related to public-health-related research, developing a research question and a testable hypothesis creating an analysis plan, applied statistical analysis of epidemiologic data, developing a research protocol for human subjects research, and case-based approaches to health issues.

Senior Research Seminar in Public Health: Read More [+]
Objectives & Outcomes

Course Objectives: 1. Develop and define a research question.
2. Conduct case-based analysis in areas of public health and medicine.
3. Be proficient in finding primary literature sources and managing literature citations using bibliographic management software (such as EndNote, RefWorks, or Zotero).
4. Be able to critically interpret information from peer reviewed medical, public health or social science literature.
5. Know basic data management skills and have working knowledge of R.
6. Know how to appropriately visualize data & select appropriate statistical tests.
7. Be able to execute & interpret basic statistical tests in R (bivariate, non-regression).
8. Be able to execute & interpret regression analyses in R (bivariate & multivariate).
9. Develop a research protocol and consent form for study of human subjects.
10. Be familiar with laboratory, analytic, survey/questionnaire and other methods used in human research.

Student Learning Outcomes: LEARN: Laboratory, analytic, survey/questionnaire and other methods used in human research.
SKILLS: Be able to critically interpret information from peer reviewed medical, public health or social science literature.
SKILLS: Be proficient in finding primary literature sources and managing literature citations using bibliographic management software (such as EndNote, RefWorks, or Zotero).
SKILLS: Develop a research protocol for study of human subjects.
SKILLS: Develop and define a research question/write Specific Aims.
SKILLS: Learn basic data management skills and have working knowledge of R software in research.

Rules & Requirements
Prerequisites: Completion of PH 142 and PH 150A (or approval from instructors). Note, it is expected that capstone students will be 4th year graduating seniors, unless otherwise given permission to enroll by the course instructors. It is expected that capstone students will have no more than two Public Health Major core course to complete at time of enrollment
Repeat rules: Course may be repeated for credit with instructor consent.

PB HLTH 155B Women's Global Health and Empowerment 2 - 3 Units
Terms offered: Summer 2023 Second 6 Week Session, Summer 2022 Second 6 Week Session, Summer 2021 Second 6 Week Session
The course will provide core knowledge and skills from several disciplines on how to improve women's health and well-being globally. It aims to expand students' understanding of the interconnected factors that influence women's health and empowerment - including foundations of sexual and reproductive health, economic development, political frameworks and global reproductive rights, demographic and social changes, basic principles of empowerment theory, educational opportunities, and advances in gender equality.
The sessions follow a life course framework, and will be taught in a seminar style with plenty of opportunities for group discussions and case studies.

Women's Global Health and Empowerment: Read More [+]
Objectives & Outcomes

Student Learning Outcomes: 1. Identify and analyze gender inequities in health care needs and access to care.
2. Analyze the contrasting perspectives and changing paradigms among epidemiologists, public health experts, demographers, economists, human rights activists and development specialists related to women's health and empowerment.
3. Explain the major theories of gender, sexuality and power.
4. Demonstrate foundational knowledge of female anatomy, physiology and health conditions when discussing broader issues of women's health and empowerment.
5. Critically examine how gender and women's empowerment is addressed in the Sustainable Development Goals and other development frameworks.
6. Evaluate case studies of interventions designed to improve women's health and empowerment in differing cultural and national contexts and recommend improvements.
7. Compare macro level political, institutional, and structural factors that differentially influence men's and women's health and empowerment in relation to local, cultural, and regional contexts.
8. Identify the major institutions and non-governmental organizations that influence women's health and empowerment and suitable approaches for implementing interventions to ensure gender equality.
9. Assess the impact of women's health on advances in other sectors including child health, education, economic development, and social stability.

Hours & Format
Summer: 6 weeks - 6-6 hours of lecture per week
PB HLTH 155C War and Public Health 3 Units

Course covers global Public Health effects of war in context of war's destruction of the health care infrastructure within the Social Ecological framework. Topics include war's impact on infectious disease & as barrier to control of vaccine-preventable diseases; maternal child health; health of those displaced; psychosocial toll & environmental health consequences. Curriculum focuses on ongoing global conflicts & ramifications of U.S. wars in Iraq and Afghanistan, includes modules focusing on public health prevention approach to war & research methods for studying health outcomes in conflict zones. Students work in teams & apply the course material to a specific war that they will follow. Panel discussions to feature veterans & refugees.

Course Objectives:
The course will provide students with a foundation on which they can build their own line of future inquiry exploring how war impacts public health. The objectives of this course include providing students a new paradigm through which they can identify the sustained impact of armed conflict on communities, families and individuals, and understand that those effects linger long after the dead are buried or buildings are reconstructed.

Student Learning Outcomes:
Finally, they will be able to evaluate how public health's prevention approach can be applied to armed conflict. In addition, students should be able to place the public health effects of war within the Social Ecological framework. Moreover, upon completion of the course, students should be able to explain the effects of war on environmental health, nutrition and psychological health. Students should also be able to explain how war can prevent control of infectious diseases, has contributed to outbreaks or re-emergence of diseases that were previously eliminated, and has prevented the eradication of vaccine preventable diseases. Students who take the course will apply critical thought to media reports about community violence or adverse health and place them in the framework of the public health consequences of war. The learning outcomes of the course include the ability to explain how war's destruction of the health care infrastructure impedes Public Health's mission globally — particularly in war zones in low-resource countries — and how war has also impacted Public Health in US communities.

PB HLTH C155 Sociology of Health and Medicine 4 Units

This course covers several topics, including distributive justice in health care, the organization and politics of the health system, the correlates of health (by race, sex, class, income), pandemics (e.g., AIDS, Avian Flu and other influenzas, etc.), and the experience of illness and interactions with doctors and the medical system.

Rules & Requirements:
Prerequisites: Sociology 1, 3, 3AC or consent of instructor
Credit Restrictions: Students will receive no credit for Sociology C115 after taking Sociology 155, Sociology C155/Public Health C155. A deficient grade in Sociology 155 may be removed by taking Sociology C115/Public Health C155.

Hours & Format:
Fall and/or spring: 15 weeks - 3-3 hours of lecture and 0-2 hours of discussion per week
Summer:
6 weeks - 7.5-7.5 hours of lecture and 0-2 hours of discussion per week
8 weeks - 6-6 hours of lecture and 0-2 hours of discussion per week

Additional Details:
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Also listed as: SOCIOL C115
PB HLTH 155D Preparation for Public Health Practice and Leadership Seminar 3 Units
Terms offered: Fall 2022, Fall 2021
This capstone course will enhance student preparation to be effective public health practitioners and leaders through application of core knowledge, strengthening essential professional skills and development of post-graduation career and graduate education plans. Students will tackle real-world public health cases and emerging local challenges to enhance essential problem solving and innovation skills. Students will also enhance key communication, team and project skills. Through these activities, students will strengthen their ability to lead themselves, work effectively with others and lead health improvement.
Preparation for Public Health Practice and Leadership Seminar:
Read More [+]
Objectives & Outcomes
Course Objectives: Through lecture, readings, and course activities, students will develop the capacity to:
# Apply public health knowledge acquired in core courses to case-based scenarios.
# Analyze the impact of a public health problem on a community/population level.
# Develop and apply innovative approaches to addressing public health issues and present recommendations.
# Develop interpersonal skill building, conflict resolution, and practical problem-solving skills.
# Enhance oral and written communication and other key skills necessary for effectiveness as a professional and in demand by employers including: project management, human centered design and process improvement.
# Increase knowledge of public health career and graduate education options and how to choose a path.
# Prepare career-related materials. Strengthen interviewing and networking skills.
# Strengthen effectiveness at working in teams to address public health challenges.

Rules & Requirements
Prerequisites: Completion/concurrent enrollment of Public Health Major core courses: PH142, PH150A, PH150B, and P150D. Note, it is expected that capstone students will be 4th year graduating seniors, unless otherwise given permission to enroll by the Course Instructor. It is expected that capstone students will have no more than two Public Health Major core course to complete at time of enrollment

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

PB HLTH 155E Seeing People: Understanding Homelessness' Roots, Stigmas & Solutions-A Berkeley Changemaker Course 3 Units
Terms offered: Fall 2022
The goal is to support you as an informed citizen who understands homelessness, its roots, the multilevel systems & services that exist to address it, & the levers at each level to effect change. We will focus on developing skills to be a changemaker by working together to address homelessness & “housism” in our community. “Housism” is the belief that people experiencing homelessness are intrinsically less worthy/human. We will be informed in our growth by counter-narratives by people experiencing homelessness & by theoretical frameworks, such as the Social Determinants of Health, Critical Race Theory, Intersectionality, the Ecological Model, & theories of stigma. Students who have experienced homelessness or unstable housing are welcome.

Seeing People: Understanding Homelessness’ Roots, Stigmas & Solutions-A Berkeley Changemaker Course:
Read More [+]
Objectives & Outcomes
Course Objectives: 1. Explain the causes of homelessness from historical, systems, and social-ecological perspectives.
2. Discuss the roots of homelessness in the United States and in the Bay Area in systemic racism against BIPOC populations, homophobia, transphobia, and sexism.
3. Inspect and unpack your housism and begin to develop and apply an antihousist framework.
4. Categorize the different subpopulations of people experiencing homelessness and the unique forces leading to their vulnerability.
5. Demonstrate the relationship between homelessness, individual wellbeing and public health.
6. Apply changemaker principles to the goal of eliminating housism in the Bay Area.

Rules & Requirements
Requirements this course satisfies: Satisfies the American Cultures requirement
Repeat rules: Course may be repeated for credit with advisor consent.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

PB HLTH 170C Drinking Water and Health 3 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
The course covers monitoring, control and regulatory policy of microbial, chemical and radiological drinking water contaminants. Additional subjects include history and iconography of safe water, communicating risks to water consumers and a bottled water versus tap water taste test as part of the discussion on aesthetic water quality parameters. A field trip to a local water treatment plant is included.
Drinking Water and Health: Read More [+]

Objectives & Outcomes
Student Learning Outcomes: By the end of this course, students will be expected to:
Recognize the global occurrence of waterborne contaminants and related health impacts.
Understand water quality monitoring and control of key water quality constituents.
Appreciate the complexities of the regulatory process as it pertains to public drinking water systems in the US and abroad.
Read and synthesize published and unpublished sources of information regarding drinking water and health. Prepare a literature review in journal submission format.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Instructor: Smith
Drinking Water and Health: Read Less [-]
PB HLTH 177 Applied GIS for Public Health 3 Units
Terms offered: Summer 2023 8 Week Session, Summer 2022 8 Week Session, Summer 2021 8 Week Session
Course is to familiarize students with principles, methods, & techniques necessary to apply GIS in public health settings. Weekly readings, discussions, case studies are presented to introduce application of GIS technologies: maps for visualizing clusters, mobile phone-Apps for data collection, & spatial analyses such as proximity analysis or site suitability. Course includes assignments aimed & acquiring experience on the use of GIS for infectious disease control, disease cluster detection, environmental justice, health services data mapping, & spatial risk assessment. Culminating project: Story Map where students use maps they’ve created as well as additional narrative text images & optional videos for community health education or policy
Applied GIS for Public Health: Read More [+]
Objectives & Outcomes
Course Objectives:
# Create a Story Map to convey information related to an important health issue.
# Create a mobile-GIS tool for capturing geo-located health or asset data.
# Know how to define, design, implement and apply spatial data to a health-related issue.
# The ability to develop disease surveillance maps.
# The objective of this course is to provide technical training.
# Understand how maps relate to policies such as redlining and how those relate to current health inequities.
# Understand the rewards and challenges of working with spatial data.

Student Learning Outcomes: Obtain marketable skills (eg. StoryMaps and Dashboards)

Rules & Requirements
Repeat rules: Course may be repeated for credit with advisor consent.

Hours & Format
Summer: 8 weeks - 6 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Instructor: Smith

PB HLTH 177A Public Health Maps and Spatial Analysis for Health Equity 3 Units
Terms offered: Spring 2023
Students will acquire geospatial skills and apply them in the context of structural inequity, health disparities, and racial justice. Geospatial skills will be applied to public health problems that continue to demonstrate differences in health exposures, risks, and adverse outcomes for BIPOC living in the US, as well as to contribute to much poorer outcomes in the US than in other high income countries. The main learning objective in the course is to understand the importance of place in the display, analysis, and reporting of health data at local, national, and global scales. Each week, case studies will provide context for the specific ways in which place matters when thinking about public health and health services delivery.
Public Health Maps and Spatial Analysis for Health Equity: Read More [+]
Objectives & Outcomes
Course Objectives: Communicate information related to an important health issues including their geographic and demographic contexts. 
# How: Use the ESRI StoryMap Builder to incorporate short narratives, maps, infographics, and images into a web-based interactive communication tool. Demonstrate the ability to design, implement, and apply spatial data to determine and display relative prevalence of diseases. 
# How: Create maps and perform kernel density and cluster/hot spot analysis for a specific disease
# How: Create a dashboard to illustrate the location and incidence of disease cases
Illustrate how maps were used to contribute to structural racism by relating historic redlining maps to current health inequities.
# How: Create a social vulnerability index from demographic and health indicators, and map the index by county
# How: Compare a current map that illustrates social vulnerabilities to historic redlining maps from the Federal Housing Administration. Illustrate the limitations of political boundaries (census areas, cities, counties), in predicting disease prevalence, and equity issues associated with health risks.
# How: Use appropriate classification schema to overcome the “Modifiable Areal Unit Problem”
Predict concentrations of an environmental contaminant where data are missing
# How: Use Kriging to interpolate values in an area that has some missing data. Report survey data cartographically.
# How: Develop and execute a geo-enabled survey on a public health issue
# How: Create an interactive map of survey results

Hours & Format
Fall and/or spring: 15 weeks - 1.5 hours of lecture and 3 hours of discussion per week

**PB HLTH 181 Poverty and Population 3 Units**
Terms offered: Fall 2022, Fall 2021, Fall 2020
Globally one million more births than deaths occur every 112 hours, 90% in the poorest countries. Between 1960 and 1980, considerable attention was focused on rapid population growth. Afterwards, the attention has faded and investment in family planning evaporated. Family size among some of the poorest women is increasing. This course seeks to provide an understanding of the relationships between population growth, poverty, women's autonomy, and health. It explores the political "fashions" underlying changing paradigms among demographers, and economists, and development specialists.

Poverty and Population: Read More [+]

PB HLTH 200A Current issues in Public Health Ethics: Research and Practice 3 Units  
This course seeks to examine the ethical challenges inherent in public health practice, research, and policy. It covers a range of topics in ethics through cases representative of different public health dilemmas. The cases considered include treating homeless people with TB, rationing medical care in the United States, conducting HIV studies of maternal-fetal transmission in Africa, managed care policies and setting priorities, the deaf community and cochlear implants, and the societal implications of genetic information. The goal is to enable students to develop an analytical methodology that has practical application for their future work.

PB HLTH 200C Public Health Core Breadth Seminar 3 Units
Terms offered: Fall 2015, Fall 2009, Fall 2008
This course is designed to provide students with a brief introduction to the field of public health and a basic understanding of the contributions of the environmental, behavioral, and management and policy sciences to the practice of public health. Central foci of the course include the interactions of biology, behavior and environment; the community and population-based nature of public health; health disparities; the relationships among health care access, cost and quality of care; the performance of the health care delivery system; the concepts of risk and burden of disease; the importance of ecological and life course perspectives; and theory- and evidence-based public health research and practice. By the conclusion of this course, students will be able to discuss and describe seminal concepts and approaches, as well as current theories and methods underlying societal efforts to study and address key public health problems.

PB HLTH 200J Health Policy and Management Breadth Course 2 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
Health policy and management applies concepts from economics, organizational behavior, and political science to the structure, financing, and regulation of the public health and health care delivery systems. This breadth course is designed to give MPH students a basic set of competencies in the domains central to the field.

Objectives & Outcomes

Course Objectives:
# Compare the organization, structure, and functions of health care, public health, and regulatory systems across US and selected international settings;
# Critically evaluate the role that structural racism plays in the US healthcare system; and
# Identify the core functions of public health and the essential services that together comprise public health;
# Identify the principal functions of health insurance, the structure of public and private health insurance plans, and trends in enrollment and expenditures;
# Understand and be able to discuss dimensions of the policy-making process, including the roles of ethics and evidence;
# Understand and explain basic principles and tools of finance, budgeting, and resource management;
# Understand the drivers of innovation in preventive, diagnostic, and therapeutic technologies;
# Understand various barriers to healthcare access, and discuss potential strategies to mitigate these challenges

Hours & Format

Fall and/or spring: 15 weeks - 1 hour of lecture and 1 hour of discussion per week

PB HLTH 200K Environmental Health Sciences Breadth Course 2 Units
Terms offered: Spring 2023, Spring 2022, Fall 2021
This course will give an introduction to the major human and natural activities that lead to release of hazardous materials into the environment as well as the causal links between chemical, physical, and biological hazards in the environment and their impact on human health, including those related to climate change. The basic principles of toxicology, exposure assessment, risk assessment, risk perception, and environmental health policy will be presented. The overall role of environmental risks in the pattern of human disease, both nationally and internationally, will be covered.

Objectives & Outcomes

Course Objectives:
# Compare the organization, structure, and functions of health care, public health, and regulatory systems across US and selected international settings;
# Critically evaluate the role that structural racism plays in the US healthcare system; and

**PB HLTH W200 Foundations of Public Health Practice 1 Unit**

Terms offered: Spring 2023, Fall 2022, Fall 2021

Today, graduates of public health programs must be prepared for evidence-based practice and the generation of practice-based evidence. They must have the ability to work in an increasingly interdisciplinary, interprofessional and cross-sectoral environment and settings. Foundations of Public Health Practice introduces 12 areas of critical public health content to bridge the chasm between public health practice and theory. This course serves as an orientation to the various subjects, fields, and concepts that students will encounter in their education. While no single professional is expected to be an expert in all of these practice areas, everyone must be aware of their importance.

**PB HLTH W200F Environmental Health Sciences Breadth Course 2 Units**

Terms offered: Spring 2023, Fall 2022, Spring 2022

This survey course covers the breadth of hazards from chemical, biological, and physical agents of concern to environmental health professionals. Lectures are presented by experts on particular topics that emphasize the activities involved in professional practice.

Environmental Health Sciences Breadth Course: Read More [+]

**Objectives & Outcomes**

**Course Objectives:** Communicate environmental health issues to lay public and professionals, using appropriate terminology and data. Define and describe major ways in which the environment and human health are linked in different parts of the world and for different populations. Develop a case study on an environmental health and justice issue and propose solutions that integrate the main components of environmental health (exposure assessment, toxicology, epidemiology, and risk assessment).

Define and describe the key components of environmental health, including exposure assessment, toxicology, epidemiology, and risk assessment.

Describe ways by which the health impact from major environmental health risks, such as climate change, can be effectively controlled.

Learn effective ways to communicate important information in Environmental Health.

Learn the concepts of environmental justice, water sanitation and hygiene (WASH), health risks associated with disasters, food systems, and public health.

Understand the associated health effects from developmental, adult and occupational chemical exposures.

**Hours & Format**

PB HLTH W200G Health and Social Behavior Breadth 3 Units
Terms offered: Spring 2023, Fall 2022, Spring 2022
Course focuses on social, cultural, bio-behavioral determinants of health & health behavior, issues related to social & behavioral interventions, policies aimed at improving community & population health. Students will have experience in/be able to apply range of Health & Social Behavior perspectives, approaches to critically analyze public health issues, conceptualize research & interventions at different levels of ecological model. Topics designed to convey key concepts, highlight approaches in Health & Social Behavior via lectures, readings, videos & online resources. Group assignments focus on community context & health. Will require students to synthesize/apply concepts from course. Assignments will culminate in a final group project.
Health and Social Behavior Breadth: Read More [+]

Objectives & Outcomes

Course Objectives: Describe a range of major themes, theories and conceptual frameworks, research and practice approaches commonly encountered in Health and Social Behavior.
Describe and apply ecological public health frameworks and concepts emphasizing multilevel interactions between biology, behavior, environments and the distribution of life opportunities.
Describe the rationale for community involvement in public health actions and the key principles of community-based approaches to public health.
Understand how socially constructed concepts of race, ethnicity, immigration, gender and social class influence health and structure population health inequities.
Understand relationships between human behavior and public health to critically assess models of human behavior and to explore strengths-based, multi-level intervention design.

Rules & Requirements

Credit Restrictions: Students will receive no credit for PB HLTH W200G after completing PB HLTH 200L. A deficient grade in PB HLTH W200G may be removed by taking PB HLTH 200L.

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of seminar per week

PB HLTH 201E Public Health Interventions: Theory, Practice, and Research 2 or 3 Units
Terms offered: Spring 2021, Spring 2020, Spring 2019
This course focuses on the primary factors that affect health and the interventions that can promote health. Students examine the determinants of health and the theory, history, types, ethics, and approaches of public health interventions. Community level interventions and multidisciplinary approaches receive special emphasis. The course stresses a rigorous critique of the outcomes of interventions and practical ways to improve them. Students take an active role in the design and conduct of the course.

PB HLTH 202G Advanced Alcohol Research Seminar 1 Unit
Terms offered: Spring 2023, Fall 2022, Spring 2022
This course is an advanced alcohol research seminar in which presentations are made by alcohol research scientists nationally and internationally, as well as pre-and post-doctoral fellows, and focus on special topical areas related to psychosocial research in the field each semester. Areas covered include the epidemiology of drinking patterns and alcohol-related problems, issues related to treatment of alcohol-related problems, and health services research. Guest presentations are also provided (related to topics outside psychosocial research) to provide a breadth of understanding in the field. The seminar also includes sessions focused on methodological issues in alcohol-related research and grant writing, and has a research ethics component covering a number of sessions.

PB HLTH 204F Culture, Public Health Practice, and Eliminating Health Disparities: From Ideas to Action in the 21st Century 3 Units
Terms offered: Spring 2016, Spring 2015, Spring 2013
Public health literature and practice make frequent reference to the terms culture, cultural competence, race, racism, ethnicity, and health disparities. Understanding these terms, their complex meanings and current application in public health practice is the subject matter of this course. By the end of the course students will be able to describe the concepts of culture, race, racism, ethnicity, cultural competence, cultural humility, health disparities and their use in public health theory and practice; identify and describe the application of these concepts in local public health practice; and demonstrate an understanding of these concepts and their application in public health practice through the completion of a group project.

PB HLTH 204G Research Advances in Health Disparities: Multidisciplinary Perspectives 1 - 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
Understanding and addressing persistent racial inequities in health status is a core public health problem. Ethnic minorities are much more likely to experience much higher rates of poor birth outcomes, infant mortality, infectious and chronic diseases, hospitalization rates, and early death rates from all causes. This course examines racial and ethnic health inequities as a function of social inequality. Topics are drawn from a social determinants of health framework emphasizing the importance of the economic, social, and political features that adversely affect the health status of many underrepresented racial and ethnic minorities in the U.S. from a multidisciplinary approach: Public Health, sociology, anthropology, and social welfare.

PB HLTH 205 Program Planning and Needs Assessment 4 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
This course provides the necessary skills to plan effective public health programs. Examines principles and methods underlying program planning, emphasizing multi-disciplinary, collaborative and “real world” planning processes. Provides students with conceptual and experiential understanding of how to plan, conduct and present community health needs assessments by covering both theory and practical skills. Students will become familiar with the theory and methods related to ecologically valid assets-based and needs-based community health assessments and translate them into practice. Students will work with a community organization to apply the program planning principles and needs assessment taught throughout the course.

Program Planning and Needs Assessment: Read More [+]

Objectives & Outcomes

Course Objectives: Students will work in a community organization to apply the knowledge and skills acquired in this class. Real world application of program planning principles and needs assessment will be taught throughout the course. Students will complete this course with the development of a complete program plan for a community organization or collect, analyze and present community health assessment data and develop feasible programmatic recommendations.

PB HLTH 206D Programs and Policies in Global Nutrition 3 Units
Terms offered: Spring 2022, Fall 2019, Fall 2017
This course will use a case-based approach to examine the ways in which governments in developing countries design and implement policies and programs that affect food production and access to safe, affordable, and nutritionally adequate diets. In the course we will analyze, assess and evaluate ways to take action to ameliorate the major nutritional problems facing vulnerable populations in developing countries.

Programs and Policies in Global Nutrition: Read More [+]

Objectives & Outcomes

Course Objectives:

# Critical analysis of issues in public health nutrition relating to the context of a developing country;

# Demonstration of effective organizational skills and the ability to communicate with and enlist the support of potential participants and stakeholders; and

# Participation in making policy related to health and nutrition within services, programs, and projects.

# Understanding of the biological and social roles of nutrition in health, particularly as they relate to issues of poor nutrition in a global context;

Student Learning Outcomes:

1. Describe and interpret the prevalence and trends of public health nutrition issues faced by mothers and children living in low- and middle-income countries, ranging from malnutrition to micronutrient deficiencies to overweight and obesity.

2. Discuss the political, environmental, cultural, and socioeconomic factors underlying a wide range of nutrition issues in low- and middle-income countries and predict how interventions affect these factors.

3. Identify the ways in which historical, social, cultural, economic, commercial, and institutional factors promote or act as barriers to the design and implementation of agriculture, food, and nutrition policies and programs, and the ways in which these policies and programs affect health and other outcomes.

4. Integrate knowledge of nutritional issues and policies to analyze methods through which stakeholder groups affect the design and implementation of food and nutrition programs and policies.

**PB HLTH W206 Maternal and Child Health Nutrition 3 Units**

Terms offered: Summer 2023 Second 6 Week Session, Summer 2022 Second 6 Week Session, Summer 2021 Second 6 Week Session

Nutrition plays a vital role in human reproduction, child growth/development. Course provides an overview of the major nutritional issues for infants, children, adolescents, and reproductive age women in the United States. One module on malnutrition offers global content. Reviews programs, interventions aimed at improving MCH nutrition, builds student familiarity with evidence-based MCH nutrition practice guidelines. Demonstrates a methodology for applying this knowledge to food choices at a personal, programmatic level. Students will be asked to engage in a "hands on" experience with the USA's Supplemental Nutrition Assistance Program (formerly The Food Stamp Program). Supplemental learning activities for this course are highly interactive.

**PB HLTH W206A Nutrition Assessment 3 Units**

Terms offered: Spring 2023, Spring 2022

Nutrition assessment tools are used to evaluate an individual’s or population’s nutrition status and/or risk of specific nutrient excess or deficiency. This 3-unit course will discuss various dietary, anthropometric, clinical, and biochemical nutrition assessment tools and provide you with skills to determine which assessment tools are needed based on program/research project goals, how to interpret nutrition assessment survey results and apply them to populations, and critically evaluate the metrics used to define different types of malnutrition.

Nutrition Assessment: Read More [+]

**Objectives & Outcomes**

Course Objectives: 1. Recommend the appropriate nutrition assessment tool needed based on the target population, nutrient/nutrition issue of interest, and goal of the assessment.

2. Critically evaluate nutrition assessment tools based on their required resources, applications, limitations, and biases.

3. Interpret nutrition assessment results and apply them at the population level.

**Hours & Format**

Fall and/or spring: 8 weeks - 6 hours of lecture per week

Online: This is an online course.

Subject/Course Level: Public Health/Graduate

Grading: Letter grade.

Instructor: Zyba

Nutrition Assessment: Read Less [-]
PB HLTH W206B Food and Nutrition Policy 3 Units
Terms offered: Fall 2022
Course examines ways in which the US govt designs & implements policies/programs that affect access to nutritionally adequate, safe, affordable diets. We analyze how multiple stakeholders in the food system interact to affect policy design & implementation; historical, social, economic, environmental & political factors that determine stakeholder positions on policy issues; & ways these factors promote or act as barriers to achieving a system that promotes optimal food access, nutrition & health. We cover contemporary food & nutrition policy issues, as well as the history of these issues & ideas. Students will understand the broad spectrum of policies that affect human diets & will become familiar with the policy processes.
Food and Nutrition Policy: Read More [+]

Objectives & Outcomes

Course Objectives: a. Describe the principal areas of domestic food and nutrition policy (e.g., food assistance, dietary guidance and education, agricultural support, food industry regulation, food safety regulation, food and nutrition research) and the most important current issues related to these policy areas.
b. Identify the governmental agencies primarily responsible for each area of food and nutrition policy and explain their roles.
c. Identify the ways in which historical, social, cultural, economic, commercial, and institutional factors promote or act as barriers to the design and implementation of agriculture, food, and nutrition policies and programs, and the ways in which these policies and programs affect health.
d. Describe the major federal food programs—their history, purpose, reach, and effectiveness, as well as current policy and political questions being raised about them.
e. Identify and apply the methods through which stakeholder groups affect the design and implementation of agriculture, food, and nutrition policies.
f. Recognize your potential to engage in and influence food and nutrition policy throughout your career.

Rules & Requirements

Credit Restrictions: Students will receive no credit for PB HLTH W206B after completing PB HLTH 206B. A deficient grade in PB HLTH W206B may be removed by taking PB HLTH 206B.
Repeat rules: Course may be repeated for credit with advisor consent.

Hours & Format

Fall and/or spring: 8 weeks - 7 hours of lecture per week
Online: This is an online course.

PB HLTH 207 Transforming the Food System: From Agroecology to Population Health 3 Units
Terms offered: Fall 2022, Fall 2021
This course will take a solutions-oriented approach to addressing the pressing problems in current food systems. We will explore strategies used by the disciplines of agroecology, policy, law, public health, and business in working to improve food systems and apply their varied approaches to real-world case studies. Through weekly readings, discussions, and problem-solving sessions with Berkeley’s leading food systems experts, students will gain a broad understanding of food systems and the leverage points that can be targeted to improve the health of people and the planet.
Transforming the Food System: From Agroecology to Population Health: Read More [+]

Objectives & Outcomes

Course Objectives: 1. Define and explain food systems, explain interdependence within those systems, and understand their impacts on the health of people and the planet
2. Identify leverage points for transforming food systems based on evidence
3. Understand various strategies—legal, political, agro-ecological, economic, behavioral, etc.—that different disciplines use to target leverage points
4. Articulate different perspectives on food systems issues and explain the pros and cons of strategies for food systems change
5. Adapt communication styles to various audiences and media

Rules & Requirements

Prerequisites: Graduate student standing
Repeat rules: Course may be repeated for credit with advisor consent.

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of seminar per week

PB HLTH 207A Public Health Aspects of Maternal and Child Nutrition 2 or 3 Units

Terms offered: Fall 2022, Fall 2021, Fall 2020
Nutrition plays a vital role in human reproduction and child growth and development. This course provides an overview of the major nutritional issues faced by women of childbearing age, infants, children, and adolescents in the United States and around the world, with selected topics explored in greater depth. Nutritional problems are multi-factorial and occur at multiple levels and we will study them from a variety of viewpoints (biological, psychological, socio-cultural, economic, political, and behavioral) as well as from individual and population perspectives. Participants in the course will become acquainted with nutritional research, policies, and interventions designed to enhance reproduction, growth, and development. This course will also explore health disparities in maternal and child nutrition in both a domestic and international context.

Public Health Aspects of Maternal and Child Nutrition: Read More [+]

Rules & Requirements

Prerequisites: Course in epidemiology required; previous coursework in biology and nutritional science highly recommended

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture per week

PB HLTH 209A Introduction to Plant-Centric Food Systems 1 Unit

Terms offered: Spring 2023, Spring 2022
This is an energizing and exciting symposium that explores the robust opportunities and accompanying challenges of plant-forward solutions. The gathering is convened to underscore the urgency of shifting to plant-based diets for healthier, more equitable, and resilient food systems and to explore how students will play a pivotal role in the transformation of the food system. Plant Futures is the first program at UC Berkeley to feature in depth multidisciplinary conversation aimed at exploring the role and importance of plant-based foods as a critical lever for change, and provides a unique opportunity for students to directly connect to prominent leaders, creators and influencers and forge pathways for future professional engagement.

Introduction to Plant-Centric Food Systems: Read More [+]

Objectives & Outcomes

Course Objectives: 1.
Deepen students' knowledge of the impacts of our diets and current food production systems on personal health and planetary boundaries that directly drive climate change by understanding the urgent challenges and most critical levers for transformation in food systems.
2. Build critical systems thinking competencies at the intersection of agriculture, nutrition, climate science, behavioral science, economics, entrepreneurship and ethics with plant-centric food systems.
3. Provide a multisectoral opportunity for students to build community and connect with leaders in different disciplines working in the plant-based sector through networking opportunities that converge the scientific, business, and academic communities.
4. Create an opportunity for students to engage and directly collaborate with food industry business leaders, experts, and researchers working on the forefront of innovation and sustainability, specifically in the plant-based sector.
5. Provide students with frameworks, examples and skill sets to design and implement innovative plant-centered food systems that are sustainable and driven by public health principles.
6. Equip students with the foundation and tools to become advocates and change makers for plant-centered food systems in their personal lives, on campus, and beyond. Ultimately, prepare students at a personal and professional level to accelerate the transition to a healthy, sustainable and just food system.

Hours & Format

Fall and/or spring: 1 weeks - 20 hours of seminar per week

PB HLTH 209B Plant Futures Challenge Lab 3
Units
Terms offered: Spring 2023, Fall 2022, Spring 2022
A collaborative, multidisciplinary applied learning journey in systems entrepreneurship, ethical leadership and innovation models intended to accelerate the transition to a healthy, sustainable and just food system.
Plant Futures Challenge Lab: Read More [+]

Objectives & Outcomes

Course Objectives:
1. Develop systems-thinking and analysis capabilities while developing ‘food-systems intelligence’ and ‘triple-bottom line’ business design capabilities. Understand the complex interdependencies and trade-offs involved in solving food systems challenges.
2. Develop an understanding of mission-driven organizational strategies and practices, based on clear ethical principles.
3. Combine and apply entrepreneurial skill sets, mind sets and tool sets needed for leadership, team building, and initiating and managing innovative change. Learn to transform an idea into a tangible, viable plan of action.
4. Learn to recognize and “size” unmet needs, issues, and opportunities in the food system and apply creativity, research, and discipline to create the type of solutions that make meaningful, lasting impacts.
5. Expand your personal capacities for collaboration while reaching out of your comfort zone by contacting and enrolling experts who can assist your project.
6. Lead and collaborate with other students from different disciplines across the University to apply the team building strategies and leadership necessary to develop a plant-forward solution to solve complex food systems challenges.
7. Grow and cultivate your professional network and experience by building deep relationships with mentors and professional allies.
8. Develop, through practice, the foundation and tools needed to become advocates for plant-forward solutions in your personal lives, at Berkeley, and beyond!

PB HLTH W209 Comparative Health Systems
3 Units
Terms offered: Spring 2023, Spring 2021, Spring 2020
In the past decade, health systems and their role in global health have received increasing focus. While disease-focused, ‘vertical programs’, such as malaria and HIV/AIDS still command the lion’s share of donor resources, it has become clear that the sustainability of disease programs depends on embedding them into a country’s health system. This course provides a real world, practical understanding of health systems, based on a solid academic foundation. It introduces current debates about health systems, health financing, and universal health coverage in the international community. Students will use five key structural questions to analyze health care systems and their performance on quality, cost and access metrics.
Comparative Health Systems: Read More [+]

PB HLTH 210 Foundations of Maternal and Child Health Policy, Practice and Science 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This course will explore issues related to maternal, child, and adolescent health throughout the life course with a focus on the social determinants of health, health disparities, and social justice. Discussion will focus on current issues central to maternal and child health policy and practice; the history and organization of MCH health services in the US; and analyze the ways in which the political context in the US and internationally affects the health and well-being of families, including critical examination of the ways in which knowledge about an issue, an understanding of the social strategies to address that issue, and political will are all leveraged to influence the creation of MCH policy.

PB HLTH 210B Adolescent Health 3 Units
Terms offered: Spring 2023, Spring 2022, Fall 2021
This course is designed to provide an understanding of the epidemiology and etiology of critical health issues among adolescents, including complex contextual influences and individual processes related to this dynamic period of life. Each adolescent health outcome will be considered in light of developmental issues related to the pubertal transition and multilevel influences that contribute to adolescent health and well-being, including 1) biological, 2) cognitive, 3) behavioral, and 4) social-culture factors. The course will emphasize: empirical evidence for the etiology of adolescent health problems, documented risk and protective factors, and content and timing of preventive intervention efforts to ameliorate risk.

PB HLTH 211 Health and Human Rights 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
The course examines the origins of health and human rights concerns and outlines a conceptual basis for human rights among health professionals. It provides an overview of the epidemiology of human rights violations worldwide and an analysis of the psychology of abuse. The course considers the role of health professionals in (1) documenting the health and social consequences of human rights violations and war; (2) treating survivors of abuse; (3) addressing specific human rights concerns of women and children; (4) identifying the impact of health policy on human rights; and (5) participating in human rights education and advocacy. The course will also examine issues of universality of human rights and cultural relativism and the role of accountability for the past abuses in prevention.

PB HLTH W212 Foundations of Global Health 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This course introduces students to the basic principles of global public health that are used to improve population health at all levels. The course will start with an introduction to essential concepts from public health disciplines that are the foundations of global health practice. Students will then apply these concepts to current global health challenges through course activities, assignments, and readings that will provide a real world context. Global health experts will share their experiences and lessons learned from implementing global health research and programs. Throughout the course, students will gain critical and creative-thinking experience in applying tools and frameworks towards addressing diverse global health needs.

PB HLTH 213A Family Planning, Population Change, and Health 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
Course examines the determinants of family size and the role played by contraception, voluntary sterilization, and induced abortion in the transition to small families. It looks at the factors controlling access to fertility regulation in developed and developing countries and discusses the factors that have made for successful family programs as well as those that have generated controversy. The course looks at the relationship between family planning and the health of women and children and at the role of family size in economic development and environmental problems. It looks at advances in family planning, organization, and promotion of services and discusses ethical issues facing providers.

PB HLTH W213 Global Health Ethics 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2019
This course provides an overview to ethical issues within a global health context. The course starts with an introduction to ethical frameworks, theories, and historical references that elevate the ethics conversation to the global stage. The course will then link theory to practice as we delve deeper into ethical issues in research, experiential learning, and delivery. We will consider ethical questions about the discipline of global public health and the roles of governments, academic institutions, organizations, health professions, and members of the public as stewards of health. Students will gain a deeper understanding of the diverse international perspectives on the concepts of ethics and health.

PB HLTH 214 Eat.Think.Design 3 Units
This course is a team-oriented, project-based course designed around the case-based and learning-by-doing models. The critical elements of the human-centered design process – discovering, ideating, and prototyping – are learned through didactic sessions and an 8-week project students work on in teams. Working with community partners on a public health issue related to food, the student teams apply human-centered design skills to the problem, and design and pilot (when possible) a solution with and for their community partner.

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor

PB HLTH 215 Anti-Racist and Racial Justice Praxis Spring Student Elective 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2000
The Anti-Racist and Racial Justice Praxis Spring Student Elective is a semester-long student elective course for continuing students. This class will cultivate up to 40 student champions to develop an anti-racist analysis of public health, present a set of anti-racist public health tools, and build skills necessary for advancing an anti-racist agenda within the field.

Objectives & Outcomes
Course Objectives:
Analyze how systems of racism operate in a modern context and impact health
Apply new skills when working to implement an anti-racist agenda at the institutional and governmental levels.
Recognize common challenges and problems in racial dialogue and learn skills to overcome these issues.

Rules & Requirements
Prerequisites: A Health and Social Behavior breadth course; PBHLTH 200L, PBHLTH W200G or PBHLTH 203A
Hours & Format
Fall and/or spring: 15 weeks - 2.5 hours of lecture per week
Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Malawa, Gaarde
PB HLTH 216A Biological Embedding of Social Factors 2 Units
Terms offered: Fall 2019, Fall 2017, Spring 2016
This is an interdisciplinary course which will adopt a broad-based ecological perspective of health and behavior. This class will emphasize the interconnected and multidirectional relationships between biology, behavior, and the social environment. This course will be conducted as a seminar series (with a focus on biological processes). We will investigate the assertion that biological, psychological, and social processes interact over a lifetime to influence health and vulnerability to disease (a developmental epigenetic perspective). Rather than focusing on “if” social factors can influence health and disease we will focus on “how” social factors may regulate/change biological measures. Three very general themes will be addressed: development, “social” neuroscience and gene-environment interactions as they relate to behavior. Topics such as constraints/plasticity and behavior, genetic determinism, vulnerability versus resilience, gene-environment interactions, fetal/developmental programming, and stress will all be touched upon.
Biological Embedding of Social Factors: Read More [+]

PB HLTH 217C Aging and Public Health 3 Units
Terms offered: Spring 2017, Spring 2016, Spring 2015
The purpose of this course is to provide an overview of research, practice, and policy in the area of aging and public health. Topics will include the epidemiology of aging; race, class, gender, and aging; nutrition and the elderly; and current health policy surrounding aging. Themes running throughout the course and linking a number of the topics covered will include the diversity of the elderly; the importance of co-morbidity and functional health status in this population group; the family and broader environmental contexts in which aging takes place; and the influence of public and private sector policies on health and health-related behavior in the elderly. Weekly lectures by the faculty will be complemented by presentations by prominent Bay Area researchers in the areas of geriatrics and gerontology. This is the core course for the School of Public Health specialty in aging and public health.

PB HLTH C217D Biological and Public Health Aspects of Alzheimer's Disease 3 Units
Terms offered: Spring 2017, Spring 2015, Spring 2014, Spring 2013
This course will survey the field of Alzheimer's disease (AD) from a biological and public health perspective by reading original research papers in the fields of medicine, neuroscience, and epidemiology. The course will begin with a historical survey of the concept of AD, followed by a description of clinical and neuropathological features. Subsequent classes will cover the genetics and molecular biology of the disease, as well as biomarkers, epidemiology, risk factors, treatment, development of new diagnostic approaches, and ethical issues. The course will also serve as a model for the analysis of complex diseases with multiple genetic and environmental causes, and late onset neurodegenerative diseases. The course will also serve as a model for the analysis of complex diseases with multiple genetic and environmental causes and late-onset neurodegenerative disease.

PB HLTH 220C Health Risk Assessment 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
This course introduces the basic scientific principles of environmental health risk assessment, develops the understanding necessary to carry out and interpret quantitative risk assessments, and describes the context in which decisions manage environmental health risks are made. The course presents the quantitative methods used to assess the human health risks associated with exposure to microbial and chemical agents, focusing on the four major components of risk assessment: hazard identification, dose-response assessment, exposure assessment and risk characterization. The course examines the application of environmental health risk assessment to contemporary issues including the associated complexities, challenges and controversies.

PB HLTH 220E Global Health Policy 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This course will provide an intensive, case-based introduction to global health policy. Students will simulate working on teams asked to advise Ministries of Health in low- and middle-income countries and other global policymaking institutions grappling with health policy questions. Over a series of four cases, the course will introduce students to key concepts in health policy and economics, including allocating scarce resources, pandemic response, financial incentives to shape provider behaviors, and policies to influence the private sector to improve population health. Students will also become familiar with the major actors and institutions that shape international health policy.

**PB HLTH W220M Health Policy Methods 3 Units**

Terms offered: Summer 2023 Second 6 Week Session, Fall 2022, Summer 2022 Second 6 Week Session

This course serves as an introduction to key topics in health policy making in the United States, with a focus on the policy process and policy analysis methods. Using the policy analysis framework of Eugene Bardach’s Eightfold Path first introduced in PBHLTH W200E, the course will explore the entire policy analysis process from the identification of a problem, to the evaluation of policy solutions, and finally to the techniques and formats for effective health policy communications. This analysis method is contextualized within the process of public policy making within the U.S. government.

Health Policy Methods: Read More [+]

**Objectives & Outcomes**

**Course Objectives:**
- Apply learned policy analysis skills to proposed and existing public health policies.
- Build critical policy analysis skills to identify and evaluate the methods used for developing policy alternatives and understand the impact of existing public health policies.
- Critique the role of research and evidence in public health policy formation and evaluation.
- Describe our country’s institutional players (i.e., legislative, administrative, judicial), their roles in policy making and how to influence policy outcomes.
- Leverage critical analysis tools of language and framing to develop and advocate health policies in verbal and written communication deliverables.

**Student Learning Outcomes:**
- Conduct policy advocacy: understand the gaps in community needs and articulate these needs in the policy setting. Develop innovative strategies for influencing health policy for diverse groups.
- Conduct policy analysis: evaluate and analyze policy solutions that are culturally competent. Communicate evidence and recommendations succinctly and persuasively.
- Deepen understanding of the dimensions of the policy-making process, including the roles of ethics and evidence.
- Examine current public health issues and their impacts on public health and health equity.
- Learn about the health policy context and the institutions, stakeholders, advocacy groups and processes that shape policy outcomes.
- Recognize the disparate impacts of policies on communities with intersectional identities.

**Rules & Requirements**

**Prerequisites:** PB HLTH W200E

**Credit Restrictions:** Students will receive no credit for PB HLTH W220M after completing PB HLTH 220. A deficient grade in PB HLTH W220M may be removed by taking PB HLTH 220.

**PB HLTH 221 Mental Health Policies, Programs, and Services 2 Units**

Terms offered: Spring 2017, Spring 2015, Spring 2013

This course provides a foundation for understanding mental illness and mental health services and the evolution and current state of our thinking about them. It presents the most frequent varieties of mental illness and addresses their frequency of occurrence, and it addresses the social disability from mental illness and the societal response to mental illness. It also considers treatments, services, effectiveness, quality of care, and financing, as well as considering financing, legal issues, and special concerns and services for children and youth. In addition, the course provides a forum to critically examine the knowledge base on mental illness, epidemiology, policies, programs, and services as it presents major controversies and highlights the best available evidence.

**PB HLTH 221B Understanding and Overcoming Health Care Disparities 2 Units**

Terms offered: Spring 2018, Spring 2016, Fall 2013

In this class, we will construct a framework to formulate explanations for health care disparities and to construct responses that have the potential for a policy-oriented, and therefore widespread, response. Taking advantage of selected developments in social science theory and research that can provide insight into how health care disparities come about, we will draw from anthropological and psychological theories of cultural orientation, cultural framing of problems, and cultural identity; as well as drawing from psychological theories of stress and coping. We also will draw from sociological theories of individual and community poverty, and theories characterizing health care system design and service delivery.

Understanding and Overcoming Health Care Disparities: Read Less [-]
PB HLTH 222A Biomedical Innovation Policy
3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
Course examines the policy framework for biomedical technology, including medical devices, drugs, diagnostics, digital therapeutics and algorithms. Emphasis will be placed on the funding of research and development, the protection of intellectual property, FDA market authorization, insurance coverage and algorithm design. Focus will be on the US but will examine industrial policy and innovation nationalism within a global context. Students are required to read peer-reviewed articles, keep up with journalistic reports and participate in classroom discussions. Lectures will be pre-recorded and posted on bCourses and it is expected that students will have watched these lectures and done the readings prior to class.

Course Objectives:
1. Be able to explain the principles of health technology assessment (HTA) and the challenges raised in their application to insurance coverage and pricing for Medicare.
2. Compare the strengths and limits of alternative mechanisms for stimulating R&D investments in the life sciences: research grants, commercialization grants, tax credits, patent-protected pricing, innovation prizes, and advanced market commitments, among others. Be able to apply these principles to develop a package of policy incentives to encourage investment in novel antibiotics.
3. Discuss the basic principles and applications of intellectual property policy and the tradeoffs between greater access to current treatments, via low product prices, and greater incentives for investment in new treatments, via high prices.
   a. Intellectual property policy with respect to generics and biosimilars
4. Discuss the basic structure of regulatory market authorization:
   a. FDA review of safety and efficacy for pharmaceuticals
   b. Accelerated review and the evolution of evidentiary demands
   c. Market authorization for medical devices, diagnostic tests, digital therapeutics
5. Explain the basic principles of health technology assessment and their applicability to insurance coverage and pricing.

Rules & Requirements

Credit Restrictions: Students will receive no credit for PB HLTH W222A after completing PB HLTH 222A. A deficient grade in PB HLTH W222A may be removed by taking PB HLTH 222A.

Hours & Format
Fall and/or spring: 8 weeks - 6 hours of lecture per week
Online: This is an online course.

PB HLTH 223C Strategic Management and the Health Sector 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
The overall purpose of this course is to assist the student in managing health care organizations from a strategic perspective. This is accomplished by systematically addressing systemwide, organization-wide, group- and individual-level issues in strategy formulation, content, implementation, and performance. Emphasis is placed upon the manager’s role in simultaneously taking into account a wide variety of internal and external factors to improve organization and system performance in meeting the health needs of individuals and communities. Emphasis is also placed on the development and implementation of strategies to meet multiple stakeholder demands, particular attention given to continuous quality improvement/total quality management.

Rules & Requirements
Prerequisites: Business Administration 205 or 224A and 223A or consent of instructor. Students are required to have a general background knowledge of the health services system.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Shortell, Oxendine

PB HLTH 223D Foundations of Health Policy and Management 2 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This course is designed as a first semester seminar for master’s students in the Division of Health Policy and Management. The purposes of this course are fourfold: 1) to provide an overview of the U.S. medical and health care systems; 2) to provide an introduction to basic concepts and competencies in health policy analysis and health management; 3) to provide internship preparation and career development activities; and 4) to provide opportunities to develop relationships with 1st- and 2nd-year HPM students and with faculty, alumni, and healthcare leaders.

Rules & Requirements
Prerequisites: Graduate standing in Health Policy and Management or consent of instructor.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Oxendine, Solomon

PB HLTH 223E Capstone Seminar in Health Policy and Management 2 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
This course is an integrative seminar that builds on the core curriculum requirements of the school and HPM specialty. Participants are master’s degree students advancing to candidacy. After sharing their internship experiences and the impact on career decisions, the students are required to draw on situations from their internship to demonstrate what they have learned by leading fellow seminar participants in facilitated discussions, culminating in a specific management recommendation or policy position. Students will gain exposure to a range of HPM issues based on the experiences of their peers. Each student is also required to produce a 20-page paper and prepare and deliver a formal presentation to seminar participants and invited faculty. The paper will address an HPM topic of interest that has been selected by the student and approved by the course faculty and the student’s academic advisor. Suggested formats for the paper are a policy or strategic management analysis, but other options may be proposed and approved by the instructor.

Rules & Requirements
Prerequisites: Graduate standing in HPM and completion of 297 internship.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of seminar per week

PB HLTH W223 Strategy in Health Care Organizations 3 Units
Terms offered: Summer 2023 Second 6 Week Session, Summer 2022 Second 6 Week Session, Summer 2021 Second 6 Week Session
This course is an introduction to health care strategy in which students will have an immersive, practical, hands-on experience in the strategic management of a real or fictitious health care organization. This course will familiarize students with the requisite skills and techniques to lead strategic change at a division, department, or enterprise level within a health care organization.

Strategy in Health Care Organizations: Read More [+]

Objectives & Outcomes

Course Objectives: 1. Strategic Management Theory and Leading Practices. Students will learn this through a combination of lectures, readings from the textbook and business journal articles, and “how to” instructional videos.
2. Real World Experience. Students will learn this through a combination of Executive Interviews, Case Studies, and personal reflection.
3. Hands-on Practice. Students will learn this through a carefully designed, team-based practical experience in which they for a real or fictitious health care organization of their choice.

Student Learning Outcomes: Adjust organizational strategy in response to real-time crises.
Define and align their organization’s mission, vision, values, and strategy.
Learn how to define and measure key performance indicators (KPIs).
Learn how to successfully implement a strategy by creating a Strategic Roadmap, high level Project Plan, and Risk Mitigation Plan.
Learn various common strategies, including: Growth by Concentration/Horizontal Integration, Growth by Related Diversification/Vertical Integration, and Innovation.
Learn various tools and techniques that may be used in informing a strategy including: Value Chain Analysis, Benchmarking, SWOT Analyses, Root Cause Analysis, Porter’s Five Forces Model, Scenario Planning, and Balanced Scorecards.
Understand the important influences of leadership and culture on the successful execution of the strategy.
Understand the pros and cons of strategic alternatives including: Internal Development, Internal New Venture Creation, Investment in New Ventures, Acquisition, Mergers, Joint Ventures/Strategic Alliances/Partnerships, and Innovation.

Hours & Format
Fall and/or spring: 7 weeks - 6 hours of web-based lecture per week
Summer: 7 weeks - 6 hours of web-based lecture per week

PB HLTH 224A Organizational Behavior and Management in Health Care 3 Units
Terms offered: Fall 2021, Fall 2020, Spring 2019
Introduction to health administration, focusing on theories of management, organizations, and environments as they relate to the administration of health services. Cases, simulation, and structured experiences will be used to tie theory to practice.

PB HLTH 235 Impact Evaluation for Health Professionals 3 Units

Terms offered: Fall 2016, Fall 2015, Fall 2014

This course will review the methods for the design and analysis of impact evaluations relevant to health professionals, especially those working in low and middle-income countries. The class will emphasize the challenges involved in identifying the causal relationship between a program or project and its outcomes while providing students with some experience in drafting a proposal that might be submitted to a funding agency for support of an impact evaluation. For doctoral students the course may help concretely to identify potential dissertation projects; for masters students the course will provide skills useful in obtaining a future job in the field.

Impact Evaluation for Health Professionals: Read More [+]

Rules & Requirements

Prerequisites: Public Health 142 or equivalent Probability and Statistics course

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

PB HLTH W236A Regulatory Science, Drug Development and Public Health 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This basic and introductory course in regulatory science addresses the demand for increased training in the US and abroad by providing an overview of the basic elements of regulation of health practice and health products; providing students with information needed to understand the most important health practice and product regulation issues from the perspective of current regulatory standards, their standards for evidence and the role of innovation in regulatory science.

PB HLTH 237A Theories and Methods in Health Policy and Health Services Research 2 or 4 Units
Terms offered: Fall 2020, Fall 2018
The first half of the course focuses on the application of organization theories to health sector organizations. The second half of the course focuses on the application of public administration and political science theories to health sector organizations. Students will also be exposed to basic research designs, logic models and hypothesis development. Emphasis is placed on critique of existing theories and the associated empirical literature. This PhD seminar course is primarily intended for first year PhD students in the Berkeley PhD program in Health Policy administered by the School of Public Health on behalf of the Graduate School. The course is also open with the consent of the instructors to students in other PhD programs.

PB HLTH 237D Health Policy PhD Dissertation Seminar 2 Units
Terms offered: Spring 2023, Fall 2022, Spring 2022
This PhD dissertation seminar is restricted to advanced students (Year 3+) of the PhD Program in Health Policy. Draw together skills developed in coursework in the preparation and conduct of one's own dissertation project. For students already advanced to candidacy, this will entail presenting research findings. For students not yet advanced, this will involve developing the dissertation prospectus. Students learn to incorporate colleague feedback to improve research projects. Practices associated with human subjects and ethics of research are also emphasized.

PB HLTH 237F Doctoral Seminar in Health Economics 2 Units
Terms offered: Fall 2022
The seminar is required for all first and second-year students in the PhD Program in Health Policy. This seminar focuses on health economics. Students critically examine empirical research focused on moral hazard, adverse selection, modeling demand, cost-effectiveness analysis, market influences, provider payment, behavioral economics, and benefits design in health care and public health.
Doctoral Seminar in Health Economics: Read More [+]

Objectives & Outcomes

Course Objectives:
a) To provide an initial exposure to the major economic theories and frameworks relevant to the study of health policy and health services research.
b) To introduce key empirical methodologies used by economists.
c) To critique empirical studies conducted from the methodological perspectives typically applied by economists.
d) To provide overall socialization to the norms and values of the component disciplines as well as the health policy and health services research field as a whole.

Rules & Requirements

Prerequisites: Doctoral student status or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of seminar per week

PB HLTH C240A Introduction to Modern Biostatistical Theory and Practice 4 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
Course covers major topics in general statistical theory, with a focus on statistical methods in epidemiology. The course provides a broad theoretical framework for understanding the properties of commonly-used and more advanced methods. Emphasis is on estimation in nonparametric models in the context of contingency tables, regression (e.g., linear, logistic), density estimation and more. Topics include maximum likelihood and loss-based estimation, asymptotic linearity/normality, the delta method, bootstrapping, machine learning, targeted maximum likelihood estimation. Comprehension of broad concepts is the main goal, but practical implementation in R is also emphasized. Basic knowledge of probability/statistics and calculus are assumed.

Introduction to Modern Biostatistical Theory and Practice: Read More [+]

Rules & Requirements

Prerequisites: Statistics 200A (may be taken concurrently)

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week

PB HLTH C240B Biostatistical Methods: Survival Analysis and Causality 4 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020, Fall 2019
Analysis of survival time data using parametric and non-parametric models, hypothesis testing, and methods for analyzing censored (partially observed) data with covariates. Topics include marginal estimation of a survival function, estimation of a generalized multivariate linear regression model (allowing missing covariates and/or outcomes), estimation of a multiplicative intensity model (such as Cox proportional hazards model) and estimation of causal parameters assuming marginal structural models. General theory for developing locally efficient estimators of the parameters of interest in censored data models. Computing techniques, numerical methods, simulation and general implementation of biostatistical analysis techniques with emphasis on data applications.

PB HLTH C240C Biostatistical Methods: Computational Statistics with Applications in Biology and Medicine 4 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This course provides an introduction to computational statistics, with emphasis on statistical methods and software for addressing high-dimensional inference problems in biology and medicine. Topics include numerical and graphical data summaries, loss-based estimation (regression, classification, density estimation), smoothing, EM algorithm, Markov chain Monte-Carlo, clustering, multiple testing, resampling, hidden Markov models, in silico experiments.

Prerequisites: Statistics 200B (may be taken concurrently)
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week
Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.

PB HLTH C240D Biostatistical Methods: Computational Statistics with Applications in Biology and Medicine II 4 Units
Terms offered: Fall 2017, Fall 2015, Fall 2013
This course and Pb Hlth C240C/Stat C245C provide an introduction to computational statistics with emphasis on statistical methods and software for addressing high-dimensional inference problems that arise in current biological and medical research. The courses also discusses statistical computing resources, with emphasis on the R language and environment (www.r-project.org). Programming topics to be discussed include: data structures, functions, statistical models, graphical procedures, designing an R package, object-oriented programming, inter-system interfaces. The statistical and computational methods are motivated by and illustrated on data structures that arise in current high-dimensional inference problems in biology and medicine.

PB HLTH 241 Intermediate Biostatistics for Public Health 4 Units

Terms offered: Spring 2023, Spring 2022, Fall 2021

In this course, students will study biostatistical concepts and modeling relevant to the design and analysis of multifactor population-based cohort and case-control studies, including matching. Key topics include: measures of association, causal inference, confounding interaction, with modeling focusing on logistic regression.

Intermediate Biostatistics for Public Health: Read More [+]

Course Objectives:

1. Draw directed acyclic graphs to show the causal relationships between covariates, intervention and outcome; and define the counterfactual outcomes of interest.
2. Fit a logistic regression model or conduct a statistical test of independence, trend, goodness-of-fit, or homogeneity to assess statistical significance from a dataset, single 2x2 table, series of 2x2 tables, or stratified 2x2 tables.
3. Fit a linear regression model with multiple exposure measures. Apply transformation to fit non-linear outcomes. Estimate and interpret model coefficients and obtain inference for them.
4. Conduct and interpret analysis of variance and co-variance.
5. Estimate, obtain inference for, and interpret the following parameters: relative risk, attributable risk, excess risk, odds ratio (pooled, adjusted, log, stratum-specific).
6. Calculate and interpret linear and logistic regression model coefficients in the presence of confounding and interaction, and for matched studies.
7. Use tools in the R programming language to fit linear and logistic regression models; test null hypotheses; and summarize, transform and visualize data.
8. Be aware of other modeling strategies not covered in depth in this course, including the Cox proportional hazards model, generalized linear models and machine learning techniques.

Rules & Requirements

Prerequisites: PB HLTH 142, PB HLTH W142 or equivalent introductory course in statistics with consent of instructor

Credit Restrictions: Students will receive no credit for PB HLTH 241 after completing PB HLTH W241R. A deficient grade in PB HLTH 241 may be removed by taking PB HLTH W241R.

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture and 2 hours of laboratory per week

PB HLTH C242C Longitudinal Data Analysis

4 Units
Terms offered: Fall 2021, Fall 2019, Fall 2018
Course covers statistical issues surrounding estimation of effects using data on units followed through time. Course emphasizes a regression model approach for estimating associations of disease incidence modeling, continuous outcome data/linear models & longitudinal extensions to nonlinear models forms (e.g., logistic). Course emphasizes complexities that repeated measures has on the estimation process & opportunities it provides if data is modeled appropriately. Most time is spent on 2 approaches: mixed models based upon explicit (latent variable) maximum likelihood estimation of the sources of the dependence, versus empirical estimating equation approaches (generalized estimating equations). Primary focus is from the analysis side.

Longitudinal Data Analysis: Read More [+]

Objectives & Outcomes

Course Objectives: After successfully completing the course, you will be able to:

• frame data science questions relevant to longitudinal studies as the estimation of statistical parameters generated from regression,

• derive consistent statistical inference in the presence of correlated, repeated measures data using likelihood-based mixed models and estimating equation approaches (generalized estimating equations; GEE),

• implement the relevant methods using R.

• interpret the regression output, including both coefficients and variance components and

Rules & Requirements

PB HLTH 243A Targeted Learning

4 Units
Terms offered: Fall 2022, Fall 2021, Fall 2015
PH 243A teaches students to construct efficient estimators & obtain robust inference for parameters that utilize data-adaptive estimation strategies (i.e., machine learning). Students perform hands-on implementation of novel estimators using high-dimensional data structures, providing students with a toolbox for analyzing complex longitudinal, observational & randomized control trial data. Students learn & apply the core principles of the Targeted Learning methodology, which generalizes machine learning to any estimand of interest; obtains an optimal estimator of the given estimand, grounded in theory; integrates state-of-the-art ensemble machine learning techniques; & provides formal statistical inference in confidence intervals & testing.

Targeted Learning: Read More [+]

Objectives & Outcomes

Course Objectives: Design an ensemble of machine learning algorithms, Super Learner, such that the optimality theory (i.e., oracle inequalities for the general cross-validation selector) is likely to hold for the data at-hand.

Explain the importance of asymptotic linearity and efficiency/inference to non-statistician collaborators, and reason whether or not the current estimator meets these conditions.

Query subject-matter experts, study designers, and others involved in the data generation process in order to

# use the data at-hand to formulate a statistical estimation problem that’s realistic, reliable, and reproducible;

# check assumptions that are required to use this data to answer causal questions (i.e., identifiability);

# build a library of machine learning algorithms that is consistent with the process that generated the data;

# design improved (potentially hypothetical) studies that would permit answering the relevant scientific question of interest, and evaluate if this ideal experiment is possible/ethical in the real-world; and

# translate the final scientific question of interest into a statistical question whose answer can be reliably estimated from the data.

Use R’s tlvverse software ecosystem to

# define a machine learning task that mirrors your estimation problem;

# specify the question of interest in terms of a tlvverse Spec; and

# design simulations that can be used to evaluate the behavior of estimators and their inference, ultimately informing your final choice for estimation.

Rules & Requirements

Prerequisites: STAT 201A-B or instructor’s consent. PBHLTH C240A / STAT C245A, PBHLTH 252D or STAT C239A recommended

Repeat rules: Course may be repeated for credit with advisor consent.

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of laboratory per week

Subject/Course Level: Public Health/Graduate

Grading: Letter grade.

Instructor: van der Laan

Targeted Learning: Read Less [-]
PB HLTH 243B Targeted Learning in Practice
2 - 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2004
This course follows PBHLTH 243A as a two part series. It provides a self-contained introduction to the computational tools for Targeted Learning through its accompanying software ecosystem, the tlverse. Each class incorporates a concise preliminary lecture, vignette-guided live coding exercises, and discussion. Students will have the opportunity to perform hands-on implementation of novel estimators for answering causal questions with real-world cross-sectional data using the tlverse software ecosystem of R packages.
Targeted Learning in Practice: Read More [+]

Objectives & Outcomes

Course Objectives:
- Apply standard cross-validation schemes using the origami R package, including V-fold, stratified, ad cluster-specific cross-validation.
- Approximate causal effects under stochastic treatment regimes with the tmle3shift R package by defining a single shift, grid of counterfactual shifts, or individual-level shifts of the treatment.
- Differentiate stochastic, dynamic, optimal dynamic, and static treatment regimes from each other, and interpret effects under each kind of intervention.
- Estimate direct and indirect effects based on decompositions of the total causal effects of static and stochastic interventions with the tmle3mediate R package.
- Estimate the effect of a static intervention using the appropriate “Spec”, as defined in the tmle3 R package, and apply tmle3’s delta method in order to estimate transformations of existing parameters.
- Follow the roadmap of statistical learning to define estimation problems in realistic statistical models, and obtain valid inferences.
- Obtain and interpret variable importance metrics from the following tlverse R packages: sl3, tmle3, tmlenopttx, tmle3shift, and tmle3mediate.
- Train a super learner using the sl3 R package by selecting an appropriate loss function, metalearner, and assembling a library of candidate machine learning algorithms.
- Use the tmle3nopttx R package to learn the optimal individualized treatment regime, and to estimate effects under such data-adaptive regimes.

Rules & Requirements

Prerequisites: PB HLTH 243A

PB HLTH 243C Information Systems in Public Health
2 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
An introduction to new information systems, such as the Internet and interactive television, and how they may be used to improve human health. The course has three objectives: first, to familiarize students with new information technologies; second, to review how these technologies will be used by public health professionals, consumers, health care providers, and others; and third, to study related ethical and legal issues such as privacy, access, and liability. The course is designed for people with minimal understanding of interactive technologies.

PB HLTH 243D Special Topics in Biostatistics: Adaptive Designs
3 Units
Terms offered: Fall 2018, Fall 2015, Fall 2014
This course examines the theory and statistical methods for analyzing data generated by adaptive group sequential designs. It also considers the construction of targeted adaptive group sequential designs that adapt in a way that is optimal for the estimation of a particular target feature of the data generating experiment (i.e., causal effect of the treatment). Topics to be covered include: sequential testing, adaptive sample size, martingale estimating functions to construct estimators, targeted maximum likelihood estimation for adaptive designs, targeted Bayesian learning for adaptive designs, martingale theory for the analysis of estimators for adaptive designs.

PB HLTH 244 Big Data: A Public Health Perspective 3 Units
Terms offered: Spring 2023, Spring 2022, Fall 2021
Big Data deluge now engulfs almost every brand of science and business, requiring expertise in combination of statistics and computing. This course aims to help students develop a set of useful skills to cope with the Big Data challenges, with particular focus on Public Health applications. It covers a wide range of modern statistics and machine learning techniques, as well as state of the art computational tools, and emphasizes statistical modeling and inference (e.g., how to properly formulate a hypothesis and a model, develop intuitive insights and interpretations, and evaluate uncertainty of the outcomes) and covers important computational and algorithmic components (modern computational paradigm of Map-Reduce).

PB HLTH 249 Grant Writing 3 Units
Terms offered: Fall 2022, Spring 2004, Spring 2003
The objective of this course is to introduce students to the fundamentals of proposal writing for epidemiologic research. The course will focus primarily on developing an NIH Research Grant (R Series), though we will also discuss other grant mechanisms. In addition, the course will cover the grant submission process and grand review. Students will write a formal proposal focusing on a specific research question of their choice. Emphasis will be placed on development of significant and innovative research aims, critical evaluation of the previous literature and proposing a valid and feasible approach to address their research question.
Grant Writing: Read More [+]

Objectives & Outcomes
Course Objectives:
• Demonstrate critical thinking and communication skills
• Describe principles of grant writing
• Design an epidemiologic study
• Explain about the grant submission and review process

Rules & Requirements
Prerequisites: PBHLTH 250A, PBHLTH 250B & PBHLTH 293: Epidemiology Doctoral Seminar is recommended. Developing a research topic, writing a 1st draft of your Specific Aims takes time. Accomplishing these tasks, writing a full grant proposal is a tall order for a semester. Recommend that prior to taking this class you take PH 293: Epidemiology Doctoral Seminar, which focuses on developing a research topic & Specific Aims. PH 249 picks up where PH 293 leaves off & requires a strong first draft of your Aims page
Credit Restrictions: Students will receive no credit for PB HLTH 249 after completing PB HLTH 249, or PB HLTH 249. A deficient grade in PB HLTH 249 may be removed by taking PB HLTH 249, or PB HLTH 249.

Hours & Format

PB HLTH 250A Epidemiologic Methods I 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This course is designed to introduce principles and methods of epidemiology, including types and sources of descriptive epidemiologic data, analytic study designs (intervention trials, cohort, case-control, cross-sectional and ecological), screening, confounding and other types of bias, and causal inference. The course will provide a basic understanding of epidemiology for those pursuing a career in public health.

Rules & Requirements
Prerequisites: 142 (may be taken concurrently)

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: McCoy

PB HLTH 250B Epidemiologic Methods II 4 Units
Terms offered: Spring 2023, Spring 2022, Fall 2020
This course is intended as an intermediate level course in the field of epidemiology. Topics include causal inference; measurement of disease rates; inferential reasoning; and research study designs including ecologic, case-control, cohort, intervention trials, and meta-analytic designs (potential sources of bias, confounding, and effect modification in each research design are explored in depth); topics in clinical epidemiology including the use of likelihood ratios, receiver operator curves, and the sensitivity, specificity, predictive value of a test; and a brief introduction to logistic regression, survival analysis, and decision analysis. The readings from this course are drawn primarily from advanced epidemiology textbooks (Kleinbaum, Rothman, Miettinen).

Rules & Requirements
Prerequisites: 250A or an equivalent introductory course in epidemiology or advanced degree (M.D., Ph.D., D.V.M.) in a biomedical field

Hours & Format
Fall and/or spring: 15 weeks - 4 hours of lecture and 2 hours of laboratory per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Ahern or Colford (alternating years)
PB HLTH 250C Advanced Epidemiologic Methods 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
This course will cover a series of advanced analytical methods for epidemiologic research, drawing heavily on concepts covered in PH 250B. The course consists of a series of modules, including modeling of epidemiological measures of effect, Bayesian methods, instrumental variable analysis, mediation analysis, missing data, sensitivity analysis and methods to address sources of systematic error in epidemiologic research. Hands-on application is emphasized. Class time will consist of lectures, class discussion, student presentations and a weekly practicum. Advanced Epidemiologic Methods: Read More [+]

Rules & Requirements
Prerequisites: 241, 245, 250B, 252, or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 2 hours of laboratory per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Bradshaw
Advanced Epidemiologic Methods: Read Less [-]

PB HLTH N250A Epidemiologic Methods 3 Units
Terms offered: Summer 2023 Second 6 Week Session, Summer 2022 Second 6 Week Session, Summer 2021 Second 6 Week Session
This introductory graduate-level course presents the principles and methods of epidemiology, including descriptive and analytic approaches to assessing the distributions of health, disease, and injury in populations and factors that influence those distributions. The emphasis is on developing an understanding of concepts, rather than quantitative methods, although calculations are involved. Through the combination of lectures, readings, critical review of papers, and problem sets, students without prior coursework in epidemiology will acquire the core competencies in epidemiology expected of all MPH graduates. Epidemiologic Methods: Read More [+]

Objectives & Outcomes
Course Objectives: Calculate basic epidemiology measures. Communicate epidemiologic information to lay and professional audiences. Critically evaluate the strengths and limitations of epidemiologic research publications. Draw appropriate inferences from epidemiologic data. Identify key sources of data for epidemiologic purposes. Recognize the important contribution of epidemiology to scientific, ethical, economic and political discussion of health issues. Understand basic ethical principles pertaining to epidemiologic studies. Understand public health problems in epidemiologic terms. Use the basic terminology and definitions of epidemiology.

Rules & Requirements
Prerequisites: There are no prerequisites, although it is advantageous to have taken or be concurrently taking an introductory course in biostatistics (e.g., PH 141 or PH 142)
Credit Restrictions: Students will receive no credit for PB HLTH N250A after completing PB HLTH 250A, PB HLTH W250, or PB HLTH N250A. A deficient grade in PB HLTH N250A may be removed by taking PB HLTH 250A, PB HLTH W250, or PB HLTH N250A.

Hours & Format
Summer: 6 weeks - 8 hours of lecture and 4 hours of discussion per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Mujahid
Epidemiologic Methods: Read Less [-]
PB HLTH W250 Epidemiologic Methods I 3 Units
Terms offered: Spring 2023, Fall 2022, Spring 2022
This introductory graduate course presents principles & methods of epidemiology, including descriptive & analytic approaches to assessing the distributions of health, disease & injury in the population & factors influencing those distributions. Emphasis is on developing an understanding of concepts, rather than quantitative methods. Basic calculations are involved. Course consists of readings, critical review of epidemiology papers, brief video lectures to explain key concepts, quizzes & exams that allow students to practice applying epidemiological concepts. Students without prior coursework in epidemiology will acquire the core competencies in epidemiology expected of all MPH graduates. Course shares the same content & learning of PH 250A

Objectives & Outcomes
Course Objectives: Calculate basic epidemiology measures. Communicate epidemiologic information to lay and professional audiences. Critically evaluate the strengths and limitations of epidemiologic research publications. Draw appropriate inferences from epidemiologic data. Identify key sources of data for epidemiologic purposes. Recognize the important contribution of epidemiology to scientific and ethical discussion of health issues. Understand basic ethical principles pertaining to epidemiologic studies. Understand public health problems in epidemiologic terms. Use the basic terminology and definitions of epidemiology.

Rules & Requirements
Prerequisites: Concurrent or previous enrollment in an introductory biostatistics course (e.g., W142)

Hours & Format
Fall and/or spring: 7 weeks - 6 hours of web-based lecture per week 15 weeks - 3 hours of web-based lecture per week

Online: This is an online course.

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: McCoy

PB HLTH W250B Epidemiologic Methods II 4 Units
Terms offered: Fall 2022, Fall 2021, Spring 2021
This course is an intermediate level course in epidemiology. It replaces previously approved and delivered courses PHW250F and PHW250G. Topics include causal inference; measurement of disease rates; inferential reasoning; research study designs, ecologic, case-control, cohort, intervention trials, meta-analytic designs; potential sources of bias, confounding, effect modification in research design are explored in depth; topics in clinical epidemiology, likelihood ratios, receiver operator curves, the sensitivity, specificity, predictive value of a test; brief introduction to logistic regression and survival analysis. Topics are covered at a advanced level than PH250A or PHW250. Readings from this course provide a firm foundation for PH250C.

Objectives & Outcomes
Student Learning Outcomes:
• Apply causal frameworks to the assessment of causality in associations
• Assess the extent of bias in studies and calculate bias-corrected measures
• Calculate and interpret measures of disease and association.
• Define the major study designs, including their strengths and weaknesses, and demonstrate their appropriate applications
• Define, calculate and interpret effect measure modification on different scales
• Define, calculate and interpret power, sample size, confidence intervals and p-values.
• Explain sources of bias in studies
• Explain the purposes, mechanics and limitations of matching in study designs
• Identify and apply appropriate analytic techniques for study questions, and interpret coefficients and other quantities estimated using these techniques.
• Identify appropriate applications of measures of disease and association.
• Identify design and analysis approaches to reduce bias in studies
• State the purposes of screening, and calculate and interpret screening measures.
• Explain the purposes and process of systematic review and meta-analysis.

Rules & Requirements
Prerequisites: PBHLTH 150A, PBHLTH 250A or PBHLTH W250

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of web-based lecture and 2 hours of web-based discussion per week

Online: This is an online course.

Additional Details
PB HLTH W250F Epidemiologic Methods II: Part 1 3 Units
Terms offered: Fall 2019, Fall 2018
This course is intended as an intermediate level course in the field of epidemiology. Topics include causal inference; measurement of disease rates; inferential reasoning; and research study designs including ecologic, case-control, cohort, intervention trials, and meta-analytic designs. These topics are covered at a more advanced level than in PH250A or PHW250. The readings from this course are drawn primarily from advanced epidemiology textbooks (e.g., Kleinbaum, Rothman). The course is intended to provide a firm foundation for students who will later enroll in 250C.
Epidemiologic Methods II: Part 1: Read More [+]

Rules & Requirements

PB HLTH 251C Causal Inference and Meta-Analysis in Epidemiology 2 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
This course will review the theoretical aspects of causal inference, literature review, and meta-analysis, but its focus will be more on the practical aspects of these topics that are not commonly found in textbooks or presented in classes on epidemiologic theory. It is hoped that the student develops the day-to-day skills necessary to complete and present a well-documented, accurate, and thorough review of epidemiologic literature.

Causal Inference and Meta-Analysis in Epidemiology: Read More [+]

Rules & Requirements
Prerequisites: Students in the first semester of the second year of the epidemiology/biostatistics Master's of Public Health program. (Students from other programs welcome.)

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: A. Smith, Steinmaus

Causal Inference and Meta-Analysis in Epidemiology: Read Less [-]

PB HLTH 251D Applied Epidemiology Using R 2 Units
Terms offered: Fall 2019, Fall 2018, Fall 2017
This is an intensive, one-semester introduction to the R programming language for applied epidemiology. R is a freely available, multi-platform (Mac OS, Linux, and Windows, etc.), versatile, and powerful program for statistical computing and graphics (http://www.r-project.org). This course will focus on core basics of organizing, managing, and manipulating epidemiologic data; basic epidemiologic applications; introduction to R programming; and basic R graphics.

Applied Epidemiology Using R: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Aragon

Applied Epidemiology Using R: Read Less [-]

PB HLTH W251 R for Public Health 2 Units
Terms offered: Fall 2022, Fall 2021
The course examines principles & methods underlying the use of R, emphasizing multi-disciplinary, collaborative, & real world uses. We will emphasize practices for collaborative coding using Git/GitHub repositories for storing & sharing code to benefit not only your current collaborators but your most frequent collaborator. We will introduce best practices for organizing data & projects, how to create reproducible examples (a.k.a. reproxf) for when you get stuck and need to ask the R community for help (but can’t share a full dataset because it’s too large or contains confidential information). Application of principles will be taught through scenarios that public health practitioners encounter.

R for Public Health: Read More [+]

Objectives & Outcomes
Course Objectives:
Effectively engage with public health practitioners in the use of R to address current public health and/or policy issues;

Apply knowledge of R to support ongoing analytic work in epidemiology and biostatistics;

Create meaningful visualizations of data and have a basic understanding of tools available through R to present data (including R markdown, R Shiny)

Develop strategies for addressing issues that arise when combining data from multiple, complex data sources;

Identify best practices for project management, programming, and version control when contributing data to evaluate and/or support effective public health interventions;

Leverage existing open-source resources for continued learning and problem solving.

Select appropriate methods for importing, cleaning, and analyzing data within R;

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture per week

Online: This is an online course.

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Wheeler

R for Public Health: Read Less [-]
PB HLTH W251B Data Visualization for Public Health 2 Units
Terms offered: Fall 2022
In this course we will discuss the theory behind effective graphical design, how to apply this theory to communicating health data to different audiences, and how to produce a variety of graphical types using primarily the ggplot command in the statistical analysis program R. There are two lectures per week accompanied by readings. Generally, the course content and assignments alternate weekly between theory and R programming.
Data Visualization for Public Health: Read More [+]
Objectives & Outcomes
Course Objectives:
• Apply color theory and accessibility principles to reach the widest audience.
• Create a data dashboard using REDCap or Tableau.
• Create graphics for print and digital media.
• Effectively communicate your messages, both graphically and verbally.
• Leverage existing graphical applications, including mapping/census data
• Produce different styles of graphics using R.
• Understand the theory behind good graphical design for presenting health data.
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week
Online: This is an online course.
Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Mocello
Data Visualization for Public Health: Read Less [-]

PB HLTH 252 Epidemiological Analysis 4 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This 4-unit course will cover modern quantitative methods relevant to epidemiologic research drawing heavily on concepts covered in PB HLTH 250B. Course topics include generalized linear models, Kaplan-Meier estimation, survival distributions, and models for parametric and semi-parametric survival analysis. We will also cover methods for confounder selection, dose-response modeling, and interaction and effect modification.
Epidemiological Analysis: Read More [+]
Objectives & Outcomes
Course Objectives: Apply the appropriate statistical model to estimate epidemiologic effects of interest
Articulate necessary assumptions for different methods, and accurately interpret results
Identify measures of association that can be estimated under various study designs
d.
Understand analyses presented in epidemiologic literature, and evaluate their soundness
e.
Follow future developments in epidemiologic research
Rules & Requirements
Prerequisites: PB HLTH 250B, PB HLTH 241, or consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week
Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Bradshaw
Epidemiological Analysis: Read Less [-]
PB HLTH 252B Infectious Disease Modeling 2
- 4 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
This course will lead students through the process of designing mathematical models of infectious diseases, fitting these models to data, and using them as public health tools to design effective control strategies. Examples are drawn from COVID-19, HIV, influenza, Ebola, and mosquito-borne diseases such as malaria and Zika virus. Each class consists of a lecture followed by a computer-based activity to apply the material. Students also work on a project in which they design their own model and use it to answer a specific research question.

Course Objectives
1. Design compartmental models of infectious diseases,
2. Understand the role of heterogeneity, especially in sexually-transmitted infectious,
3. Understand the importance of stochasticity in outbreak modeling,
4. Estimate parameters, such as the basic reproductive number, R0, from epidemiological data,
5. Fit mathematical models to incidence and prevalence data,
6. Incorporate interventions into infectious disease models.

Rules & Requirements
Prerequisites: Students should be able to write and interpret ordinary differential equations, and to manipulate beginner-level code in R

Hours & Format
Fall and/or spring: 15 weeks - 3-3 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Marshall

PB HLTH 252C Intervention Trial Design 2
Units
Terms offered: Spring 2023, Fall 2022, Spring 2022
Students learn through pre-recorded lectures. There are graded student presentations of final course project to interpret and design clinical and population-level field trials in addition to a written midterm. Topics: formulation of a testable trial hypothesis; identification of appropriate study populations; blinding (including indices for assessment); randomization (including traditional and adaptive); sample size estimation; recruitment strategies; data collection systems; quality control and human subjects responsibilities; adverse effects monitoring; improving participant adherence; use of surrogate outcomes; preparation of a meta-analysis summarizing a group of trials.

Student Learning Outcomes
3) identify whether appropriate steps have been taken to provide transparency in a published Trial;
4) be able to design a basic Intervention Trial in the student’s area of interest;
5) prepare a summary meta-analysis for a group of published Trials published on one topic of interest to the student.

At the completion of the course, students will be able to: 1) critique published Intervention Trials with respect to design and potential sources of bias:

Rules & Requirements
Prerequisites: PBHLTH 250A or equivalent introductory Epidemiology course

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture and 1 hour of discussion per week

PB HLTH 252D Introduction to Causal Inference 4 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
This course presents a general framework for causal inference using directed acyclic graphs, non-parametric structural equation models, and counterfactuals. Marginal structural models and causal effect estimation using inverse probability of treatment weighting, G-computation, and targeted maximum likelihood are introduced. In two-part presentations, students will define and implement research questions.  

Introduction to Causal Inference: Read More [+]

**Rules & Requirements**

**Prerequisites:** 241 or C240A (can be taken concurrently); 245 or similar course covering multivariable linear and logistic regression analysis; for epidemiology students, 250C, or consent of instructor

**Hours & Format**

**Fall and/or spring:** 15 weeks - 2-2 hours of lecture, 0-2 hours of discussion, and 2-0 hours of laboratory per week

**Additional Details**

**Subject/Course Level:** Public Health/Graduate

**Grading:** Letter grade.

**Instructor:** Petersen

PB HLTH 252E Advanced Topics in Causal Inference 4 Units
Terms offered: Spring 2023, Fall 2021, Fall 2020
The course will be conducted as a seminar with readings and discussions on a range of more advanced topics. We will cover case-control designs; longitudinal causal models, identifiability and estimation; direct and indirect effects; dynamic regimes (individualized treatment rules); approaches for diagnosing and responding to violations in the positivity assumption. Additional topics may include stochastic interventions, community-based interventions, and Collaborative-TMLE. There will also be some guest lectures and presentations from current students and faculty members.

Advanced Topics in Causal Inference: Read More [+]

**Rules & Requirements**

**Prerequisites:** Public Health 252D or consent of instructor

**Hours & Format**

**Fall and/or spring:** 15 weeks - 2 hours of lecture, 1 hour of discussion, and 1 hour of laboratory per week

**Additional Details**

**Subject/Course Level:** Public Health/Graduate

**Grading:** Letter grade.

Advanced Topics in Causal Inference: Read Less [-]
PB HLTH W252A Introduction to Causal Inference for Public Health Professionals 4 Units
Terms offered: Spring 2023
With the ongoing "data explosion", methods to delineate causation from correlation are perhaps more pressing now than ever. This course will introduce a general framework for Causal Inference in Public Health: 1) clear statement of the research question, 2) definition of the causal model and effect of interest, 3) assessment of identifiability, 4) choice and implementation of estimators including parametric and non-parametric methods, and 5) appropriate interpretation of findings. The statistical methods include G-computation, inverse probability weighting (IPW), and targeted minimum loss-based estimation (TMLE) with machine learning.
Introduction to Causal Inference for Public Health Professionals: Read More [+]

Objectives & Outcomes

Course Objectives:
1. Translate a research question and background knowledge into a causal model (directed acyclic graphs and non-parametric structural equation models).
2. Define the target causal parameter with counterfactuals.
3. Assess identifiability of the target causal parameter and express it as a parameter of the observed data distribution.
4. Understand the challenge posed by parametric estimation approaches and apply machine learning methods.
5. Understand the properties of and apply 3 estimators: G-computation, inverse probability weighting (IPW), and targeted minimum loss-based estimation (TMLE) with Super Learner.
6. Understand how to appropriately address missing outcomes, which may be differentially measured.
7. Apply course concepts to address cause-and-effect in a real data application.
8. Be ready to explore more advanced settings for Causal Inference.

Rules & Requirements

Prerequisites: Required: A graduate-level Biostatistics course covering basic probability theory and multivariable regression analysis (e.g., PHW241 Intermediate Biostatistics for Public Health); or instructor permission. Recommended: - A graduate-level course in Epidemiology (e.g., PHW250 Epidemiologic Methods). - Prior programming experience with R

Hours & Format
Fall and/or spring: 15 weeks - 4 hours of lecture per week

Online: This is an online course.

PB HLTH 253D Behavior and Policy Science in HIV Treatment and Prevention 3 Units
Terms offered: Spring 2016, Spring 2015, Spring 2014
This course will integrate various social science disciplines and apply these perspectives to problems of HIV treatment and prevention, particularly in the developing world. Throughout the academic term, students will apply knowledge of behavioral science, epidemiology, quantitative and qualitative methods in the analysis of developing and evaluating HIV-related treatment and prevention interventions, including policy interventions. Course requirements will include the preparation of a major paper recommending interventions, country level budgets and evaluation designs for a specific developing country. Specific requirements for this paper will be distributed during the third class session.

Occupational and Environmental Epidemiology: Read Less [-]
PB HLTH 255A Social Epidemiology 4 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
This is a breadth course intended to provide an overview of the field of social epidemiology and its role in understanding the social determinants of population health and health disparities. Given the breadth of social epidemiology, 255A provides a systematic and selective overview of literature covering the history and development of the field, theoretical perspectives and conceptual approaches, major topical areas and current controversies related to theory, research methods and research findings. Principles emphasized throughout the course (ecological model, measurement and causality) will provide a framework for critical analysis and synthesis across content areas. This is not a methods course.

Prerequisites: Consent of instructor. 142, 145, and 250A-250B recommended

Hours & Format
Fall and/or spring: 15 weeks - 4 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Nuru-Jeter

PB HLTH 255C Mental Health and Psychopathology 3 Units
Terms offered: Spring 2021, Spring 2019, Fall 2013
This doctoral seminar is designed to provide an understanding of the complex (and often interactive) individual and environmental conditions that increase the risk of psychopathology in individuals across the life span. We will start by learning about general concepts important to an understanding of psychopathology and prevention of psychopathology, including the "biopsychosocial model," "psychological resilience," and different levels of preventive interventions. For each different area of psychopathology, we will consider: a) the core feature of disorder; b) key theory and empirical evidence regarding etiology and course, with a particular emphasis on understanding the range of risk and protective factors on the individual, family, and community level; and c) the implications of etiological understanding for public health efforts to prevent the particular disorder.

Prerequisites: Open to doctoral students or with consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of seminar per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Ozer
PB HLTH 255D Methods in Social Epidemiology 2 Units
Terms offered: Fall 2022, Spring 2022, Spring 2020
This course is designed to review, evaluate, and apply methods currently used in the field of social epidemiology. The course aims to teach approaches to forming clear research questions, and selecting the best method(s) to answer the questions posed. Initially we will discuss approaches to defining clear and specific research questions. We will then discuss recent controversies around the meaning of questions posed in social epidemiology, and the ability of currently used methods to answer questions in social epidemiology. Finally we will review, evaluate, and apply a range of different methods that are or could be used to answer questions in social epidemiology, again emphasizing the types of questions answered by these methods, and their ability to address the challenges to effectively answering questions in social epidemiology. There will be a mixture of discussion and lecture depending on the topic, with student participation and questions strongly encouraged.

PB HLTH 255E Structural Inequalities and Reproductive Health 2 Units
Terms offered: Spring 2015, Spring 2012, Spring 2011
This course will address the role that structural inequalities assume in shaping reproductive health disparities. We will examine relevant epidemiological research, review and critique public health interventions, and discuss how research in this area can inform policy. The course will be organized around three modules, each linked to reproductive health: poverty, gender-based violence, and migration. Within each module, students will examine measurement, research design, and ethical challenges.

PB HLTH 256 Human Genome, Environment and Public Health 4 Units
Terms offered: Spring 2019, Spring 2018, Spring 2016
This course will cover basic principles of human/population genetics and molecular biology relevant to understanding approaches to molecular and genetic epidemiology: approaches to genome-wide association studies; application of biomarkers to define exposures; recent developments in genomics, epigenomics and other -omics, including next generation sequencing technology and genomics in personalized medicine and health. Hands-on computer and wet laboratory will provide experience with modern research tools.

Prerequisites: College-level biology course or consent of instructor. Introductory biostatistics recommended
PB HLTH C256 Human Genome, Environment and Public Health 4 Units
Terms offered: Spring 2023, Fall 2020, Spring 2019
This introductory course will cover basic principles of human/population genetics and molecular biology relevant to molecular and genetic epidemiology. The latest methods for genome-wide association studies and other approaches to identify genetic variants and environmental risk factors important to disease and health will be presented. The application of biomarkers to define exposures and outcomes will be explored. Recent developments in genomics, epigenomics and other ‘omics’ will be included. Computer and wet laboratory work will provide hands-on experience.

Human Genome, Environment and Public Health: Read More [+]

Rules & Requirements

Prerequisites: Introductory level biology/genetics course, or consent of instructor. Introductory biostatistics and epidemiology courses strongly recommended.

Credit Restrictions: Students who complete PB HLTH 256 receive no credit for completing PH C256.

Hours & Format
Fall and/or spring: 15 weeks - 4 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Barcellos, Holland
Also listed as: CMPBIO C256

PB HLTH C256A Human Genome, Environment and Human Health 3 Units
Terms offered: Spring 2017
This introductory course will cover basic principles of human/population genetics and molecular biology relevant to understanding how data from the human genome are being used to study disease and other health outcomes. The latest designs and methods for genome-wide association studies and other approaches to identify genetic variants, environmental risk factors and the combined effects of gene and environment important to disease and health will be presented. The application of biomarkers to define exposures and outcomes will be explored. The course will cover recent developments in genomics, epigenomics and other ‘omics’, including applications of the latest sequencing technology and characterization of the human microbiome.

Human Genome, Environment and Human Health: Read More [+]

Rules & Requirements

Prerequisites: Introductory level biology course. Completion of introductory biostatistics and epidemiology courses strongly recommended and may be taken concurrently.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Barcellos, Holland
Also listed as: CMPBIO C256A

Human Genome, Environment and Human Health: Read Less [-]
PB HLTH C256B Genetic Analysis Method 3 Units
Terms offered: Prior to 2007
This introductory course will provide hands-on experience with modern wet laboratory techniques and computer analysis tools for studies in molecular and genetic epidemiology and other areas of genomics in human health. Students will also participate in critical review of journal articles. Students are expected to understand basic principles of human/population genetics and molecular biology, latest designs and methods for genome-wide association studies and other approaches to identify genetic variants, environmental risk factors and the combined effects of gene and environment important to human health. Students will learn how to perform DNA extraction, polymerase chain reaction and methods for genotyping, sequencing, and cytogenetics.

Genetic Analysis Method: Read More [+]

Rules & Requirements
Prerequisites: Introductory level biology course. Completion of introductory biostatistics and epidemiology courses strongly recommended and may be taken concurrently with permission. PH256A is a requirement for PH256B; they can be taken concurrently

Hours & Format
Fall and/or spring: 15 weeks - 2-2 hours of lecture and 1-3 hours of laboratory per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Barcellos, Holland

PB HLTH 260C Infectious Disease Laboratory 2 or 4 Units
Terms offered: Spring 2017, Spring 2016, Spring 2015
Module I: Practice in standard techniques for the isolation, identification, and characterization of infectious agents; laboratory safety. Module 2: Application of molecular methods to the identification and characterization of infectious agents, vectors, and hosts.
Infectious Disease Laboratory: Read More [+]
Rules & Requirements
Prerequisites: 260A or consent of instructor

PB HLTH 260E Molecular Epidemiology of Infectious Diseases 2 - 3 Units
Terms offered: Fall 2022, Fall 2020, Fall 2018
The course will cover general principles and practical approaches in the use of molecular laboratory techniques to address infectious disease epidemiologic problems. It is designed for students with experience in the laboratory or in epidemiology, but not both. The principles to be discussed will include the use of molecular techniques in outbreak investigations, characterizations of dynamics of disease transmission, identifying vehicles, and quantifying attributable risks in sporadic infections, refining data stratification to assist case-control studies, distinguishing pathovars from non-pathogenic variants of organisms, doing surveillance, and identifying genetic determinants of disease transmissions. 3-units if a five-page paper completed.
Molecular Epidemiology of Infectious Diseases: Read More [+]
Rules & Requirements
Prerequisites: 150A

PB HLTH 260F Infectious Disease Research in Developing Countries 2 Units
Terms offered: Spring 2023, Fall 2021, Spring 2021
The objective of this course is to provide M.P.H. and Ph.D. students with an appreciation and understanding of the complex issues involved in conducting scientific, laboratory-based investigation in developing countries. We will discuss the many obstacles to establishing and sustaining research projects, such as poor infrastructure, insufficient financial and material resources, and lack of scientific information and interaction. More importantly, we will identify innovative solutions to overcoming these obstacles. The first half of the course will consist of presentations by U.S. and developing countries investigators who have long-term research experience in Latin America, Asia, and Africa. We will also discuss related issues such as ethical considerations, equitable collaborations, research capacity strengthening. During the second half of the course, students will give presentations on topics of their choice.

Infectious Disease Research in Developing Countries: Read Less [-]
PB HLTH W260 Infectious Diseases 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
The purpose of this course is to provide students with knowledge and approach to understand key principles that apply to infectious diseases recognized to be of major public health importance in the USA and globally. The students will learn about the important infectious disease issues and obstacles that arise at the population level, and how to address them through science, public health practices, and policy.
Infectious Diseases: Read More [+]

Objectives & Outcomes
Student Learning Outcomes:
1. understand definitions used in discussing, describing, and reporting about infectious diseases.
2. understand US and WHO-recommended immunization practices and policies, as well as common obstacles to their universal implementation.
3. propose new ideas about how to address obstacles related to immunization policies; challenges in developing new vaccines.
4. know about the major drug-resistant infectious disease problems in the US and abroad; factors that select for drug resistance, and what needs to be done to prevent and control the spread of drug-resistant infections.
5. describe hospital infection surveillance systems; hospital infection control stewardship principles.
6. understand the rationale behind screening tests for HIAIDs and other STIs.
7. describe approaches to hepatitis screening, blood donation and blood bank screening for hepatitis viruses; differences in TB contact tracing programs in the US and elsewhere; BCG vaccination vs preventive treatment for latent TB infection in the USA.

Rules & Requirements
Prerequisites: Students must be matriculated in the On-campus Online MPH Program to enroll in this course.
Repeat rules: Course may be repeated for credit with instructor consent.

Hours & Format
Fall and/or spring: 7 weeks - 6 hours of web-based lecture per week
Online: This is an online course.

PB HLTH 262 Molecular and Cellular Basis of Bacterial Pathogenesis 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
This course for graduate students will explore the molecular and cellular basis of bacterial pathogenesis. The emphasis will be on model bacterial pathogens of mammals. The course also will include some aspects of bacterial genetics and physiology, immune response to infection, and the cell biology of host-parasite interactions. Taught concurrently with. Students enrolled in 262 also will be required to attend a weekly discussion of the primary literature, both current and classic. Each student will be required to present one paper.

PB HLTH 263 Public Health Immunology 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This course will be the principal immunology course for students in the field of public health. It is designed to teach both the basic biology of the human immune system and its response in health and disease, especially the specific response of the human immune system to major human pathogens. Four areas will be explored: 1) components of the immune system (spectrum of cell types and cell products); 2) different arms of the immune system including humoral, cell-mediated, innate, and mucosal immunity; 3) specific immune response to infection caused by viral, bacterial, fungal, and parasitic pathogens; and 4) disorders of the immune system unrelated to infectious disease. Through this course, students should not only gain a basic understanding of the human immune system, but also learn the functions and responses of the human immune system to diseases of infectious and non-infectious nature, and the relevance of these interactions in the context of public health problems.

Rules & Requirements
Prerequisites: 260A (prior or concurrent). Graduate standing. Public Health majors by consent of instructor
Credit Restrictions: Students will receive no credit for 263 after taking Molecular and Cell Biology 150.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Stanley

PB HLTH 264 Capstone Seminar in Infectious Diseases and Vaccinology 2 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
Examination of scientific, social, and policy dimensions of issues involving infectious diseases. Students select one topic for in-depth analysis and present findings in a public debate. Topics vary from year to year.

Rules & Requirements
Prerequisites: Second-year Infectious Diseases MPH students only

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Liu
Formerly known as: 264A-264B

PB HLTH 265 Molecular Parasitology 3 Units
Terms offered: Fall 2021, Fall 2019, Fall 2017
Advanced course in the molecular aspects of parasite immunology, molecular biology, genetics, biochemistry, and genomics. For each parasite, the following areas will be covered: biology; disease spectrum; epidemiology; pathogenesis, immunology; and vaccine development. The lectures will focus on “state-of-the-art” research in relation to molecular mechanisms of pathogenesis, parasite adaptations for survival within the host, and strategies for drug and vaccine development and disease control and prevention. Course content will rely heavily on current literature.

Rules & Requirements
Prerequisites: Upper division courses in molecular biology, parasitology, biochemistry, immunology, microbiology, or consent of instructor. Familiarity with reading primary research is recommended
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 10 weeks - 3 hours of lecture and 2 hours of discussion per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Harris

PB HLTH 266A Foodborne diseases 2 Units
Terms offered: Spring 2019, Fall 2016, Fall 2015
This course will cover public health, microbiological, social, and economical issues related to foodborne diseases. Three areas will be explored: 1) categories, clinical manifestations, and disease processes of foodborne illnesses; 2) etiological agents causing foodborne illnesses; 3) investigation and prevention of foodborne illness. The course will discuss different types of foodborne diseases, clinical manifestations, and the interactions between etiological agents (pathogens and non-pathogens) and human hosts. We will cover pathogens that are the most frequently associated with foodborne illness including bacterial and viral pathogens such as Salmonella, E coli, hepatitis viruses and Norwalk-like gastroenteritis viruses. We will also study non-pathogen agents such as heavy metal, pesticide, and toxic chemicals. Furthermore, the course will discuss how to identify the etiological agents in outbreaks and possible measures that can be taken to minimize the risk to the public including vaccines and education. Finally, we will explore the social and economic issues involved in the food production, distribution, and consumption that contribute to foodborne diseases.
Foodborne diseases: Read More [+]
Rules & Requirements

Foodborne diseases: Read Less [-]
PB HLTH 266B Zoonotic Diseases 2 Units
Terms offered: Fall 2021, Spring 2021, Fall 2020
This is a graduate (Ph.D. and MPH) level course designed to describe the major zoonoses and their life cycle, disease manifestations, epidemiology, and methods for prevention and control. Available treatments, diagnostics, and public health and agriculture surveillance and “forecasting” programs will also be discussed. The most recent research on the molecular and cellular basis of the mechanisms and consequences of the “species” jump from other animals to humans will be reviewed. The global nature of zoonotic diseases and the integration of multiple disciplines (molecular biology, immunology, epidemiology, evolutionary biology, ecology, animal science, veterinary medicine, etc.) will be emphasized.

Objectives & Outcomes

Course Objectives: Recognize, understand and be able to describe the public health importance of presented zoonotic diseases
Understand the agent’s life cycle (agent, host, and environment interaction), including the source(s) or reservoir(s) and host range
Understand the factors involved in the susceptibility and resistance of the human host to the cross-species transmission of disease

Rules & Requirements

Prerequisites: Public Health 260A or equivalent Infectious Diseases course (may be taken concurrently)

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details

Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Dailey

Zoonotic Diseases: Read Less [-]

PB HLTH 266C Healthcare-Associated Infections 2 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This course will examine the principles underlying the control of infections in healthcare facilities (the emphasis will be on hospitals), the causes of these infections, current important topics in this field, and future trends. Students will develop an understanding of the national and local programs involved in healthcare-associated infections (HAI’s), the major causes of HAI’s antimicrobial stewardship, specific agents and procedures causing HAI’s and how to prevent HAI’s.

Objectives & Outcomes

Course Objectives: 1) Understand the public health impact of HAI’s.
2) Know the important causes of HAI’s.
3) Formulate a plan to address each of the causes.
4) Address in-depth one important issue about HAI’s.

Student Learning Outcomes: At the conclusion of the course, students will understand the public health import of HAI’s, why they occur, and what to do to prevent them. They will also appreciate how we obtain and process the data that informs our interventions.

Rules & Requirements

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Public Health/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.
Instructor: Swartzberg

Healthcare-Associated Infections: Read Less [-]
PB HLTH 266D Homelessness and the Public's Health 2 Units
Terms offered: Spring 2023
Homelessness is an epidemic in the United States affecting more than 500,000 people each day. It impacts people of all races, age, and family situations, and it has enormous consequences for physical and mental health. There is no single cause, and no single solution. The focus of this course is the relationship between homelessness and health. We will discuss the range of causes for homelessness and how each of these is correlated to individual health, public health, public policy, and the law. We will explore various strategies and approaches through readings, guest lecturers, and student-led discussions.

Homelessness and the Public's Health: Read More [+]

Objectives & Outcomes

Course Objectives:
• Develop plans to address this important public health problem.
• Understand the consequences of homelessness on an individual’s health.
• Understand the obstacles to addressing homelessness.
• Understand the root causes of homelessness and various strategies to address them.

Student Learning Outcomes:
1) Understand the root causes of homelessness and various strategies to address them.
2) Understand the consequences of homelessness on an individual’s health.
3) Understand the obstacles to addressing homelessness.
4) Develop plans to address this important public health problem.

Rules & Requirements

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format

Fall and/or spring: 15 weeks - 1 hour of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Public Health/Graduate

Grading: Letter grade.

Instructor: Hammond

Characterization of Airborne Contaminants: Read Less [-]
Water, Sanitation and Hygiene (WaSH) for Health and Development: 3 Units

Terms offered: Summer 2023 Second 6 Week Session, Summer 2022 Second 6 Week Session

This course is designed for students who may be interested in working in countries where contaminated water, inadequate sanitation and poor hygiene (WaSH) are the cause of serious health problems. In this course, important concepts in WaSH will be covered so that students can understand what is needed to develop, implement, monitor and evaluate a WaSH program. It emphasizes concepts that are needed to develop effective, appropriate, accessible and affordable WaSH interventions to reduce the global burden of disease.

Water, Sanitation and Hygiene (WaSH) for Health and Development: Read More [+]

Objectives & Outcomes

Course Objectives:
1. Identify major water, sanitation and hygiene hazards and understand how hazards differ between different countries, watersheds, climates, cultures and regions.
2. Describe key social determinants of health that drive WaSH inequities.
3. Understand the primary WaSH interventions that have been shown to be effective at reducing morbidity and mortality.
4. Conduct vulnerability assessments of community supplies of water and sanitation systems to assess ability to provide essential services.
5. Describe the relationship between WaSH technologies, behavioral change communications and the enabling environment and how the three must work in tandem to result in sustained improvements.
6. Critically analyze WaSH-related issues associated with rapid growth of urban populations in developing countries.

Hours & Format

Summer: 7 weeks - 5.5 hours of lecture per week

Online: This is an online course.

Additional Details

Subject/Course Level: Public Health/Graduate

Grading: Letter grade.

PB HLTH 270 Introduction to Environmental Health Sciences 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
This survey course covers the breadth of hazards to chemical, biological, and physical agents of concern to environmental health professionals. Lectures are presented by experts on particular topics that emphasize the activities involved in professional practice. Students will also meet twice monthly with the instructor to discuss advanced readings and assignments related to the lecture topics. Students will conduct a project on a topic of current interest in some aspect of environmental health (under the guidance of the instructor). This course is designed for MPH students in Environmental Health Sciences and other graduate-level students interested in an overview course on environmental health.

Introduction to Environmental Health Sciences: Read More [+]

Rules & Requirements
Prerequisites: One epidemiology course; one biostatistics course (may be taken concurrently.)

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Balmes

PB HLTH 270A Exposure Assessment and Control 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
Direct and indirect methods and procedures for the estimation and control of human exposure to chemical, physical, and biological agents of concern to health in the community and in occupational settings. Includes review of measurement technologies, exposure assessment strategies, and multipathway analyses used by regulatory agencies. Also covers exposure control options and strategies, including administrative procedures, personal protective equipment, and various engineering control approaches.

Exposure Assessment and Control: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing in the School of Public Health or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Nicas, Spear

Exposure Assessment and Control: Read Less [-]

PB HLTH 270B Toxicology I 3 Units
Terms offered: Spring 2018, Fall 2016, Fall 2015
Introduction to toxicology covering basic principles, dose-response, toxicity testing, chemical metabolism, mechanisms of toxicity, carcinogenesis, interpretation of toxicological data for risk assessment, and target organ toxicity.

Toxicology I: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: M. Smith

Toxicology I: Read Less [-]
PB HLTH 270C Practical Toxicology 2 Units
Terms offered: Spring 2019, Spring 2017, Spring 2016
This course will focus on cutting-edge issues involving real-world toxicology in drug discovery, pesticide regulation, stem cell research, etc. Many well-known toxicologists, regulators, and consultants from pharmaceutical companies, petroleum industry, private consulting firms, non-profit institutes, federal and state regulatory agencies in the Bay Area will be invited to talk to our participating students. Some of the speakers are our school’s alumni who understand exactly what our students need to know before entering the real world. Learning outside the classroom will be another major focus and different from other existing toxicology courses offered at Berkeley. This new class will provide students a chance to visit some of the real-world sites allowing students to see and feel what they really need to know and to learn. To better prepare our students for the real world, we will use combined teaching/learning styles including lecture with discussion sections, site-visits, hand-on experience in a toxicology laboratory, and student group assignments or projects.

Practical Toxicology: Read More [+]

Rules & Requirements

Prerequisites: 270B or Nutrition Science and Toxicology 110 or equivalent course in toxicology

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Zhang

Practical Toxicology: Read Less [-]

PB HLTH 271C Drinking Water and Health 3 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
The course covers monitoring, control and regulatory policy of microbial, chemical and radiological drinking water contaminants. Additional subjects include history and iconography of safe water, communicating risks to water consumers and a bottled water versus tap water taste test as part of the discussion on aesthetic water quality parameters.

Drinking Water and Health: Read More [+]

Objectives & Outcomes

Student Learning Outcomes: By the end of this course, students will be expected to:
Recognize the global occurrence of waterborne contaminants and related health impacts.
Understand water quality monitoring and control of key water quality constituents.
Appreciate the complexities of the regulatory process as it pertains to public drinking water systems in the US and abroad.
Read and synthesize published and unpublished sources of information regarding drinking water and health. Prepare a literature review in journal submission format.
Using an established rubric, review and comment on a literature review (prepared by a fellow student). Rank the paper as acceptable, acceptable with minor revision, acceptable with major revision, unacceptable.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Smith

Drinking Water and Health: Read Less [-]
**PB HLTH C271G Health Implications of Climate Change 3 Units**

The course will provide a basic foundation in the physical mechanisms of, responses to, and health implications of climate change. We will explore the variety of epidemiologic, risk assessment, and statistical methods used to understand the impacts of climate change on health across diverse demographic groups. The public health implications, positive and negative, of efforts to mitigate and adapt to climate change will be elaborated, including discussions of ethical, political, and economic aspects of these efforts. Students will be responsible for leading class discussions and presenting a poster on their choice of a topic related to climate change and health.

Health Implications of Climate Change: Read More [+]

**Rules & Requirements**

**Prerequisites:** The material will be presented with minimal expectation of a background in physical science, although some additional reading may be needed for students with no university science courses. A background in epidemiology is also helpful, but not necessary

**Hours & Format**

Fall and/or spring: 15 weeks - 3 hours of lecture per week

**Additional Details**

**Subject/Course Level:** Public Health/Graduate

**Grading:** Letter grade.

**Instructors:** Jerrett, Morello-Frosch

**Also listed as:** ESPM C282

---

**PB HLTH 271D Global Burden of Disease and Comparative Risk Assessment 3 Units**

Terms offered: Spring 2016, Spring 2015, Spring 2013

The Global Burden of Disease (GBD) database utilized by provides estimates of illness, injury, and death by disease type, age, sex, and world region in a consistent and coherent manner. The course will explore the ways such a detailed database makes possible a wide range of new types of analysis of health priorities and the relationship of database will also be introduced. This seminar will also provide an opportunity for reading and discussion of the basic assumptions, data limitations, critiques, and methodological difficulties of the GBD. It is intended to be a true seminar relying heavy on class participation. The homework assignments will be greatly facilitated by use of computer spreadsheets.

Global Burden of Disease and Comparative Risk Assessment: Read More [+]

**Rules & Requirements**

**Prerequisites:** Graduate standing or consent of instructor. Introductory epidemiology (250A or equivalent) is recommended

**Hours & Format**

Fall and/or spring: 15 weeks - 3 hours of lecture per week

**Additional Details**

**Subject/Course Level:** Public Health/Graduate

**Grading:** Letter grade.

**Instructor:** K. Smith

Global Burden of Disease and Comparative Risk Assessment: Read Less [-]
PB HLTH 271E Science and Policy for Environment and Health 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
Scientific knowledge and analyses are important to the development of public policies that address the impact of the environment on health. The limits of existing knowledge and uncertainties in research results create significant challenges in applying science to answer critical questions. This course critically examines how scientific information is used in policy decisions. Case studies of current issues address characterization of scientific knowledge, interpretation of science in policy contexts, scientific integrity, and factors in addition to science that influence decisions. Assignments prepare students to effectively translate technical knowledge for multi-disciplinary and lay audiences and to participate in public policy proceedings. Core materials address differences between regulatory and market-based approaches; emerging paradigms including the precautionary principle and environmental justice; and key elements of risk assessment and cost-benefit analysis.
Science and Policy for Environment and Health: Read More [+]
Rules & Requirements
Prerequisites: Graduate standing or consent of instructor

PB HLTH 271G Health Implications of Climate Change 3 Units
Terms offered: Spring 2023, Spring 2022, Fall 2021
This course explores the Public Health effects of global climate change: physical basis of climate change, including causes & projections; burden of disease stemming from global climate change, emphasis on impacts in the developing world, global & local equity issues, interaction between climate change mitigation/adaptation activities & existing global health initiatives; direct exposures (extreme heat, drought, precipitation, sea-level rise), indirect exposures (vector-borne & zoonotic diseases, ecosystem disruption, water quantity & quality, land arability & food production, population displacement). After taking this course, students will be well positioned for further work on global environmental change and health.
Health Implications of Climate Change: Read More [+]

PB HLTH 271H Greener Solutions: A Safer Design Partnership 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
Green chemistry seeks to promote the design and adoption of safer chemicals and materials. The development and adoption of safer chemicals and materials depends on solving a number of design and selection challenges. The Greener Solutions course pairs interdisciplinary teams of 3-5 graduate students with a partner organization seeking to solve these challenges in a specific application. This 3-unit interdisciplinary, project-based course is intended for graduate students in public health, chemistry, environmental studies, and engineering. The course draws on students’ disciplinary expertise and teaches new skills to identify safer alternatives to hazardous chemicals currently used in a product or manufacturing process.
Greener Solutions: A Safer Design Partnership: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor

Fall and/or spring: 15 weeks - 2 hours of lecture per week
Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Schwarzman, Hart-Cooper
Greener Solutions: A Safer Design Partnership: Read Less [-]
PB HLTH 271J Social Justice and Worker Health 2 Units
Terms offered: Fall 2022
Course is an overview on work as a key social determinant of health. The workplace is commonly viewed as a setting for health promotion of individual behavior change, while its potential to be a source of critical exposures that directly impact health, safety & well-being of working populations is often overlooked. Purpose of the class is to help public health practitioners build a framework for understanding the role that work & workplace conditions play in individual & community health, to introduce strategies that address work-related health inequities & facilitate the development of concrete skills in these areas. The course emphasizes worker & community organization & participation in effecting social justice & public health change.

Objectives & Outcomes

Student Learning Outcomes: Define the concept of a healthy job, and describe work as a social determinant of health with an emphasis on its impact on the lives of low-wage, immigrant, and other vulnerable workers and communities. Describe the "landscape" of work and labor dynamics, including current issues and topics in worker health and safety and the populations most affected by workplace hazards and risks. Discuss basic theoretical and experiential concepts underlying the following public health strategies:

* Community organizing
* Labor organizing
* Training for action
* Effective partnerships
* Work-related policies

Practice skills in community organizing, popular education, training for action, and building effective partnerships that are all essential to professional community-based practice in public health.

Rules & Requirements

Repeat rules: Course may be repeated for credit with advisor consent.

PB HLTH 271K Introduction to Data Management and Programming in SAS for Public Health 2 Units
Terms offered: Spring 2023, Spring 2022
This class is an introduction to the use of the SAS programming language for managing, cleaning and analyzing biomedical data.

Objectives & Outcomes

Course Objectives: By the end of this course, students should be able to write SAS programs for data management, cleaning, and analysis

Student Learning Outcomes: Create and run SAS programs

* Create new variables from other data.
* Export SAS datasets
* Manipulate and transform data
* Read raw input files in various formats and create SAS datasets.
* Use SAS procedures for basic statistical inference: Chi-square tests, T-Tests, Correlations, Linear Regression, etc.
* Use basic SAS procedures to describe data numerically and graphically.
* Work with SAS datasets: sort, subset, merge, and re-format SAS datasets

Rules & Requirements

Prerequisites: It is expected that students will have taken introductory courses to both biostatistics and epidemiology (PBHLTH 142 or PBHLTH W142; PBHLTH W250A, PBHLTH 250B or PBHLTH W250, PBLTH W250F/G)

Hours & Format

Fall and/or spring: 15 weeks - 1 hour of lecture and 1 hour of laboratory per week

Additional Details

Subject/Course Level: Public Health/Graduate

Grading: Letter grade.

Instructor: Costello

Introduction to Data Management and Programming in SAS for Public Health: Read Less [-]
PB HLTH 272A Geographic Information Science for Public and Environmental Health 4 Units

Terms offered: Spring 2016, Spring 2015, Spring 2014

Geographic information systems (GIS) have emerged as an important tool for performing health and environmental analyses. GIS is generally seen as a spatial analysis system for the organization, storage, retrieval, and analysis of data for which the location and other spatial attributes are considered important (e.g., incidence of a specific disease condition in relation to a pollution source). GIS also encompasses the organizational structure, personnel, software, and hardware needed to support spatial analysis. For many health and social scientists, GIS has evolved into a new lens for viewing their work. The course will provide students with an introduction to this exciting and expanding field of inquiry. On successful completion of the course you should possess the following skills and knowledge:

1) A basic understanding of the fundamental geographic and cartographic concepts that underlie GIS.
2) Working knowledge of ArcGIS, a powerful "desktop" GIS software package that runs in a Windows environment.
3) Introductory knowledge of past, present, and possible future applications of GIS for health and environmental studies.

Geographic Information Science for Public and Environmental Health: Read More [+]

Rules & Requirements

Prerequisites: Introductory statistics course or equivalent

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture and 2 hours of laboratory per week

Additional Details

Subject/Course Level: Public Health/Graduate

Grading: Letter grade.

Instructor: Jerrett

PB HLTH 272B Case Studies in Environmental and Occupational Epidemiology 2 Units

Terms offered: Fall 2016, Fall 2015, Fall 2014

Using published studies as examples, we will focus on key epidemiologic methods as they arise in the study of environmental hazards in the community and workplace. Selected topics include the validity of exposure assessment for both community-based and workplace-based studies, specific forms of selection bias (e.g., healthy worker survivor effect), measurement error (e.g., exposure misclassification), time varying confounding, and analytical methods to model exposure-response (e.g., person-years, causal models, spatial analysis, and nonlinear models) in environmental and occupational epidemiology. Grades will be based on class participation, homework, and final project.

Case Studies in Environmental and Occupational Epidemiology: Read More [+]

Rules & Requirements

Prerequisites: Public Health 250C and 241

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details

Subject/Course Level: Public Health/Graduate

Grading: Letter grade.

Instructors: Buffler, Eisen, Hammond

PB HLTH W272A Introduction to Geographic Information Systems for Public Health 3 Units

Terms offered: Spring 2023, Spring 2022, Spring 2021

This course introduces geographic information systems (GIS) for the processing, visualization and description of spatial public health data. We will introduce principles, methods, and techniques for acquiring, processing, and manipulating spatial data. We will cover basic GIS concepts, such as coordinate systems and cartography, layering, buffering, joining spatial data, and conducting spatial queries. The role of locational information in aiding in the prevention of disease will be covered and discussed.

Introduction to Geographic Information Systems for Public Health: Read More [+]

Hours & Format

Fall and/or spring: 8 weeks - 6 hours of web-based lecture per week

Online: This is an online course.

Grading: Letter grade.

Instructors: Casey, Midekisa

Introduction to Geographic Information Systems for Public Health: Read Less [-]
PB HLTH W272C Applied Spatial Data Science for Public Health 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
This course will cover the theory and methods behind the analysis of patterns of health and disease in space. Students will increase their proficiency in the application of Geographic Information Systems (GIS) to public health data, and will learn how to perform a wide variety of space and space-time analyses. The course will introduce statistical techniques for describing, analyzing and interpreting layers of mapped health data, including the acquisition and classification of remote sensing data.

Objectives & Outcomes
Course Objectives:
- Apply appropriate spatial statistics to diverse locational data;
- Describe several statistical techniques useful for analyzing and interpreting mapped data in public health applications;
- Formulate a research question that is answerable using spatial techniques;
- Identify strengths and weaknesses of mapped data and spatial analyses;
- Provide examples of impactful spatial analyses from the literature;
- Report results of spatial analyses in a manner that is clear and understandable to both technical and non-technical audiences.

Rules & Requirements
Prerequisites:
Completion of PBHLTH W272A or permission of instructor is required to enroll in this course. Furthermore, this course requires extensive use of R. At least 50 hours of experience programming in R is strongly recommended. Similarly, this course will cover spatial regression analysis. As such, students are expected to be familiar with general linear regression.

Hours & Format
Fall and/or spring: 8 weeks - 6 hours of lecture per week
Online: This is an online course.

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Readhead

PB HLTH 273 Environmental Determinants of Infectious Disease 3 Units
Terms offered: Fall 2020, Fall 2019, Fall 2018
The course takes a global perspective, examining the environmental phenomena that influence the transmission of infectious diseases. The epidemiological significance of environmental processes are explored, including weather, climate extremes, hydrology, development projects, and land usage change. Analytical tools are discussed and critiqued with respect to their ability to resolve the role of environmental factors in shaping disease distributions and pathogen fate, transport, and persistence.

Objectives & Outcomes
Course Objectives:
- Formulate a research question that is answerable using spatial regression analysis;
- Identify strengths and weaknesses of mapped data and spatial analyses;
- Provide examples of impactful spatial analyses from the literature;
- Report results of spatial analyses in a manner that is clear and understandable to both technical and non-technical audiences.

Rules & Requirements

Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Remais

PB HLTH 275 Current Topics in Vaccinology 2 Units
Terms offered: Spring 2018, Spring 2016, Spring 2014
This is an advanced level course designed to cover current issues related to the biological and analytical aspects of vaccine development and utilization. Latest developments in recombinant vaccine technology, vaccine delivery systems, “naked DNA” vaccines, “designer” vaccines, new adjuvants, anti-tumor vaccines, epidemiological approaches to assess vaccine efficacy, effectiveness, and safety will be discussed and covered.

Objectives & Outcomes
Course Objectives:
- Formulate a research question that is answerable using spatial regression analysis;
- Identify strengths and weaknesses of mapped data and spatial analyses;
- Provide examples of impactful spatial analyses from the literature;
- Report results of spatial analyses in a manner that is clear and understandable to both technical and non-technical audiences.

Rules & Requirements
Prerequisites:
250A, 260A, and 264 or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Riley, Enanoria

PB HLTH 277 Environmental Determinants of Infectious Disease 3 Units

PB HLTH 277A Public Health Maps and Spatial Analysis 3 Units
Terms offered: Spring 2023
Students will acquire geospatial skills and apply them in the context of structural inequity, health disparities, and racial justice. Geospatial skills will be applied to public health problems that continue to demonstrate differences in health exposures, risks, and adverse outcomes for BIPOC living in the US, as well as to contribute to much poorer outcomes in the US than in other high income countries. The main learning objective in the course is to understand the importance of place in the display, analysis, and reporting of health data at local, national, and global scales. Each week, case studies will provide context for the specific ways in which place matters when thinking about public health and health services delivery.
Public Health Maps and Spatial Analysis: Read More [+]
Objectives & Outcomes
Course Objectives: Communicate information related to an important health issues including their geographic and demographic contexts.
# How: Use the ESRI StoryMap Builder to incorporate short narratives, maps, infographics, and images into a web-based interactive communication tool.
Demonstrate the ability to design, implement, and apply spatial data to determine and display relative prevalence of diseases.
# How: Create maps and perform kernel density and cluster/hot spot analysis for a specific disease
# How: Create a dashboard to illustrate the location and incidence of disease cases
Illustrate how maps were used to contribute to structural racism by relating historic redlining maps to current health inequities.
# How: Create a social vulnerability index from demographic and health indicators, and map the index by county
# How: Compare a current map that illustrates social vulnerabilities to historic redlining maps from the Federal Housing Administration.
Illustrate the limitations of political boundaries (census areas, cities, counties), in predicting disease prevalence, and equity issues associated with health risks.
# How: Use appropriate classification schema to overcome the “Modifiable Areal Unit Problem”
Predict concentrations of an environmental contaminant where data are missing
# How: Use Kriging to interpolate values in an area that has some missing data.
Report survey data cartographically.
# How: Develop and execute a geo-enabled survey on a public health issue
# How: Create an interactive map of survey results

Rules & Requirements
Credit Restrictions: Students will receive no credit for PB HLTH 277A after completing PB HLTH 177A. A deficient grade in PB HLTH 277A may be removed by taking PB HLTH 177A.

Hours & Format
Fall and/or spring: 15 weeks - 1.5 hours of lecture and 3 hours of discussion per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Smith, Ivey

PB HLTH W277 Applied GIS for Public Health Practice 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
This course will familiarize students with the principles, methods, and techniques necessary to apply Geographic Information Systems (GIS) in diverse public health practice settings. Case studies will be presented to introduce the application of GIS technologies for rendering disease surveillance maps, developing effective spatial data visualization, creating compelling and credible spatial risk maps, and acquiring and processing positioning information for health applications.
Applied GIS for Public Health Practice: Read More [+]

PB HLTH 278 Health Policymaking and 4+1 Competency Development 2 Units
Terms offered: Fall 2022
This course will provide 4+1 MPH students with a “homeroom,” a space to grow as a cohort, meet outstanding competencies, and be introduced to the internship process. The lion share of competencies addressed will be in Advocacy and Policymaking.

Health Policymaking and 4+1 Competency Development: Read More [+]

Objectives & Outcomes

Course Objectives:
1. Compare the organization, structure and function of health care, public health, and regulatory systems across national and international settings.
2. Explain basic principles and tools of budget and resource management.
3. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence.
4. Evaluate policies for their impact on public health and health equity.
5. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes.
6. Advocate for political, social, or economic policies and programs that will improve health in diverse populations.
7. Communicate audience-appropriate public health content, both in writing and through oral presentation.
8. Apply systems thinking tools to a public health issue.

Rules & Requirements

Prerequisites: 4+1 Student in first semester of program

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of seminar per week

PB HLTH 285A Public Health Injury Prevention and Control 2 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
Injuries are a major and often neglected health problem with substantial human and economic costs. Injuries are the leading cause of death from the first year of life to age 45, and the leading cause of lost potential years of life. This course provides an historical and conceptual framework within which to consider injuries (both intentional and unintentional) as social, and public health problems. Through review of epidemiology and intervention studies, course work will consider the causes and consequences of traumatic injury within developmental, social and economic contexts. Particular emphasis is placed on alternative strategies for injury prevention and on the relative benefits of intervention at different levels.

PB HLTH 291A Preparation for Public Health Practice 2 Units
Terms offered: Spring 2023, Fall 2022, Spring 2022
Series of skills-based workshops and sessions to introduce students to specialized leadership competencies needed in the public health workplace. These workshops complement the School of Public Health's (SPH) core curriculum and are selected based on the Council on Linkages between Academia and Public Health Practice, and regular feedback from public health practitioners, faculty, and students. Workshop facilitators include UC Berkeley faculty, public health practitioners, and consultants with expertise in the topic areas. Designed to teach the core public health skills relevant to pre-internship preparation and prepare students for professional success. Cases draw on past scenarios/challenges experienced in the PH field.

Objectives & Outcomes

Course Objectives: Assess student learning and grading student work fairly, consistently, and efficiently;
Build confidence in your abilities to teach.
Create and evaluate the effectiveness of discussion section plans that employ active learning strategies;
Critically reflect upon teaching and learning experiences and explain your choices as a teacher;
Describe and utilize a variety of teaching strategies and evaluation methods, including:
Develop a “toolbox” of teaching articles, resources and activities for future use; and,
Develop learning objectives for classroom activities and assignments;
Develop skills and demonstrate strategies to facilitate a more inclusive learning environment to meet the needs of diverse students
Develop skills in giving constructive feedback to peers on teaching;
Engage in collaborative learning to identify, discuss, evaluate and engage in teaching strategies designed for online or in-person class sessions;
Identify your teaching strengths and areas for development;
Reflect on your own identity, positionality and power and the role it plays in the classroom by learning about racism, anti-racism, inclusion, implicit bias, stigma, etc.
Utilize feedback and assessment tools to improve teaching;
