Economics

Overview
Founded in 1903, the Department of Economics at UC Berkeley is well known for the excellence of its teaching and advising, with a strong reputation for producing outstanding PhD graduates as well as rigorous and innovative economic research. In recent years, Berkeley economics PhDs have been hired at many other leading institutions, including Harvard, MIT, Yale, the U.S. Federal Reserve, and the World Bank. The department is also consistently ranked among the world's top research departments. Berkeley faculty have won many awards including 6 Nobel Prizes, 6 John Bates Clark Medals, and 35 Alfred P. Sloan Research Fellowships (an average of 1 per year since 1995). Berkeley economics faculty and students have done groundbreaking work in economic theory, econometrics, macroeconomics, and all major fields of applied research, and they have served as policymakers at the highest levels, both in the U.S. and abroad.

Libraries
The Thomas J. Long Business Library houses the major collection of business administration materials on the UC Berkeley campus. The Long Library's collections emphasize the academic and scholarly aspects of business to support the research and teaching mission of the University. Special strengths of the collection include business ethics; company and business history; corporate finance; corporate social responsibility; entrepreneurship; family business; high-technology industries; innovation and technological change; and nonprofit management. The collection, which spans the physical library, off-site storage in Richmond, and the web, includes over 150,000 books, 1.6 million microforms, and thousands of subscriptions in digital format. A large digital library in the social sciences supports the interdisciplinary research needs of graduate students and faculty.

The Mathematics Statistics Library maintains a reserve collection of software manuals for the Econometrics Lab. The books are owned by the Econometrics Lab but circulated by the library on their behalf.

Research Centers
Faculty and students in the department participate in many research centers. For further information, see the department's website.

ECON 111 Applied Mechanism Design 4 Units
Terms offered: Fall 1974
The course will analyze the roles of individual incentives, target group objectives and outcomes and how they are impacted by group decision making systems. A group decision making system is a way of making group level decisions. We examine this through the lens of game theory and mechanism design and other complementary analytic approaches. For example, we would examine the impact of having alternative election systems. This course draws primarily from microeconomic theory as an anchoring framework to evaluate these systems and individual actions. As with much of behavioral economics where we deal with real complex structures, we borrow from psychology (for behavioral theory) and business and politics (for real world examples).

Prerequisites:
- Required: Math 1A/1B or equivalent, Econ 1 or equivalent, Stats 20, 21, W21, 88, 131A, or 135 or equivalent
- Preferred: (not required but nice to have for background) Econ 100A /101A (Intermediate Micro), Econ 110(Game Theory), Econ 140/141 (Econometrics)

ECON 127 Antitrust Economics and Law 4 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
We will study both antitrust law and antitrust economics. Antitrust law governs the accumulation and exercise of market power. It prohibits both monopolization and agreements in unreasonable restraint of trade such as price fixing. It also prohibits anticompetitive mergers and a variety of specific competition problems such as exclusive dealing or tying arrangements. Deciding what qualifies as "monopolization," what qualifies as an "unreasonable restraint of trade," what qualifies as "anticompetitive," and more generally how to interpret the prohibitions of antitrust law invariably involves economic analysis. Such economic analysis commonly goes by the name "antitrust economics".

ECON 133 Global Inequality and Growth 4 Units
Terms offered: Spring 2024, Fall 2022, Spring 2022
This course provides an introduction to the analysis of economic inequalities and the interplay between inequality and economic growth. It focuses on three sets of core questions: 1) How does inequality evolve over the path of development? 2) What are the theories that can explain the degree of economic inequalities and its dynamic? 3) How do policies affect inequalities, and what types of policies can foster equitable growth? The course addresses these issues from a global and historical perspective: it comprehensively deals with the United States today, but also with inequality in China, India, Latin America, and Europe, as far back as 1700.

ECON 144 Empirical Asset Pricing 4 Units
Terms offered: Spring 2024
This undergraduate elective is designed for undergraduates in Economics, Statistics, Mathematics, Data Science, and IEOR who are interested in financial economics and econometric methods as applied to financial data. After reviewing important econometric concepts, the course will discuss the short-run time series behavior of stock prices and present the evidence on short- and long-run predictability of stock returns. We will then consider cross-sectional models and static equilibrium theory, including the Capital Asset Pricing Model and Arbitrage Pricing Theory, and intertemporal equilibrium models, including Arrow-Debreu pricing theory and the consumption-based CAPM. Finally, the course will introduce models of volatility and correlation.

ECON C184 International Environmental Economics 4 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This course studies the following question: How should policymakers and scholars design and analyze environmental policy in a globalized world where much economic activity and pollution crosses political borders? The course addresses issues including climate change, air and water pollution, deforestation, species extinction, and others. The course also analyzes a variety of ways that countries and regions interact, including trade, foreign direct investment, outsourcing, international agreements and treaties, and others. The course also teaches a range of tools used to analyze these issues, including life-cycle (also called environmental footprint) analysis, simple econometrics, environmental market design, non-market valuation, and the data.
International Environmental Economics: Read More [+]

Objectives & Outcomes

Course Objectives: 1. Develop a strong grasp of the main debates and ideas involving international environmental economics
2. Learn to interpret, apply, and critically assess methods used to study international environmental economic issues
3. Build skills in reading basic economic writing involving these issues, including an understanding of their evidence and conclusions, and ability to critically evaluate the basis for these conclusion

Student Learning Outcomes: 1. A strong grasp of the main scholarly debates and ideas involving international environmental economics
2. The ability to interpret and critically assess methods used to study international environmental economic issues, including: life-cycle analysis and input-output tables; simple econometric estimates; the design of environmental policy; non-market valuation; and the use of remote sensing (satellite) data
The ability to read basic empirical environmental economics papers, understand their evidence and conclusions, and critically evaluate the basis for these conclusions

ECON 191 Topics in Economic Research 4 Units
Terms offered: Spring 2024, Fall 2023, Spring 2023
This course discusses recent research and policy developments. The core objective is to expose students to different aspects of research in economics. A sequence of five different frontier research topics are studied in depth each semester. Each topic lasts three weeks, during which students will familiarize themselves with cutting-edge economic research and methodology. Students will then develop their own research ideas and write two medium-size research papers.

Terms offered: Fall 2023, Fall 2022, Fall 2021
This course presents psychological and experimental economics research demonstrating departures from perfect rationality, self-interest, and other classical assumptions of economics and explores ways that these departures can be mathematically modeled and incorporated into mainstream positive and normative economics. The course will focus on the behavioral evidence itself, especially on specific formal assumptions that capture the findings in a way that can be used by economists. Economic applications will be used for illustrative purposes, but the course will emphasize formal theory.

This seminar features current research of faculty, from UC Berkeley and elsewhere, and of advanced doctoral students who are investigating the efficacy of economic and non-economic forms of organization. An interdisciplinary perspective—combining aspects of law, economics, and organization—is maintained. Markets, hierarchies, hybrids, bureaucracies, and the supporting institutions of law and politics all come under scrutiny. The aspiration is to progressively build toward a new science of organization.
