Biophysics

The Biophysics Graduate Group is an interdisciplinary PhD program hosted by the California Institute for the Biosciences (QB3). Our program trains graduate students for careers at the interface of the biological and physical sciences. This interdisciplinary program provides an opportunity for interested students to receive training leading to the PhD in Biophysics. Approximately 60 faculty members are affiliated with the Biophysics Group, spanning over a dozen departments and groups at UC Berkeley. Students may work under the supervision of any faculty member belonging to the group.

Students interested in pursuing graduate work in biophysics typically acquire undergraduate training in one of the basic physical or biological sciences and during the first two years at UC Berkeley take self-selected courses in topics such as biology, physics, and chemistry to fill in any gaps in foundational knowledge.

Admission to the University

Applying for Graduate Admission

Thank you for considering UC Berkeley for graduate study! UC Berkeley offers more than 120 graduate programs representing the breadth and depth of interdisciplinary scholarship. A complete list of graduate academic departments, degrees offered, and application deadlines can be found on the Graduate Division website (http://grad.berkeley.edu/programs/list/).

Prospective students must submit an online application to be considered for admission, in addition to any supplemental materials specific to the program for which they are applying. The online application can be found on the Graduate Division website (http://grad.berkeley.edu/admissions/).

Admission Requirements

The minimum graduate admission requirements are:

1. A bachelor’s degree or recognized equivalent from an accredited institution;
2. A satisfactory scholastic average, usually a minimum grade-point average (GPA) of 3.0 (B) on a 4.0 scale; and
3. Enough undergraduate training to do graduate work in your chosen field.

For a list of requirements to complete your graduate application, please see the Graduate Division’s Admissions Requirements page (https://grad.berkeley.edu/admissions/steps-to-apply/requirements/). It is also important to check with the program or department of interest, as they may have additional requirements specific to their program of study and degree. Department contact information can be found here (http://guide.berkeley.edu/graduate/degree-programs/).

Where to apply?

Visit the Berkeley Graduate Division application page (http://grad.berkeley.edu/admissions/apply/).

Admission to the Program

Applicants should have sufficient undergraduate training to undertake graduate work in the chosen field. This includes such undergraduate majors as: biological sciences, structural biology, physics, math, and/or chemistry. Laboratory experience is expected.

Typical students admitted to the program have demonstrated outstanding potential as a research scientist and have clear academic aptitude in multiple disciplines, as well as excellent communication skills. This is assessed based on research experience, grades, standardized exams, course selection, essays, personal background, and letters of recommendation.

GRE general and subject tests are not required, and will not be seen by the review committee even if submitted.

Normative Time Requirements

Normative Time to Advancement

Normative time to advancement is two years.

Year 1

Students perform three laboratory rotations with the chief aim of identifying a research area and selecting a thesis laboratory. In their first year, all students must pass two graded STEM courses. Passing is a grade of “B” or higher for graduate students. This requirement can be met by: a) completing a total of 5 units of graduate level coursework (200* and above), or b) completing 6 units of combined graduate and upper-division (100 and above) undergraduate courses. Any exceptions to this policy (ie, completing coursework in 2nd year, using non-STEM course to fulfill requirement) must be approved by the Head Graduate Advisor

Year 2

Students attend seminars, prepare a dissertation prospectus, and prepare for their PhD oral qualifying examination (QE). With the successful passing of the QE, students select their thesis/dissertation committee and advance to candidacy for the PhD degree.

Normative Time in Candidacy

Years 3 to 5

Students undertake research for the PhD dissertation under a self-selected four-person committee in charge of their research and dissertation. Students conduct original laboratory research and then write a dissertation based on the results of this research. Students are required to schedule a thesis committee meeting in order to present their progress and receive feedback from their committee every year. On completion of the research, publication of at least one paper, and approval of the dissertation by the committee, the students are awarded the doctorate.

Total Normative Time

Total normative time is 5-5.5/6 years.

Lab Rotations
Students conduct three 10-week laboratory rotations in the first year. The thesis lab, where dissertation research will take place, is chosen at the end of the third rotation in late April/early May.

Qualifying Examination
The qualifying examination will evaluate a student’s depth of knowledge in his or her research area, breadth of knowledge in fundamentals of biophysics, ability to formulate a research plan, and critical thinking. The QE prospectus/proposal will include a description of the specific research problem but will serve as a framework for the QE committee members to probe the student’s foundational knowledge in the field and area of research. Proposals will be written in the manner of a NIH-style grant proposal. The prospectus must be completed and submitted to the QE chair no fewer than four weeks prior to the oral qualifying examination.

Students are expected to pass the qualifying examination by the end of the fourth semester in the program.

Time in Candidacy
Advancement
After passing the qualifying exam by the end of the second year, students have until the fifth semester to select a thesis committee and submit the online advancement to candidacy form to the Graduate Division.

Dissertation
Primary dissertation research is conducted in years 3-5/5.5. Requirements for the dissertation are decided in consultation with the thesis advisor and thesis committee members. To this end, students are required to have yearly thesis committee meetings with the committee after advancing to candidacy. Publication of a first (or co-first) author peer-reviewed paper or uploading a preprint of a first (or co-first) author manuscript to biorXiv is required prior to graduation.

Dissertation Presentation/Finishing Talk
There is no formal defense of the completed dissertation; however, students are expected to publicly present a talk about their dissertation research in their final year.

Required Professional Development
Presentations
All biophysics students are expected to attend the annual retreat and present research talks there. They are also encouraged to attend national and international conferences to present research from the second year onwards.

Teaching
Biophysics students are required to teach one semester and may teach more. The teaching requirement may be waived, in consultation with the Head Grad advisor and Chair, for substantial service to the program (such as creating and teaching a 5-week module, and active participation on the DEI Committee).

BIOPHY 293B Research Seminar: Faculty Evening Research Presentations (FERPS) and Student Evening Research Presentations (SERPS) 2 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
Seminar on presentation and evaluation of results in area of student's individual research interests.

Rules & Requirements
Prerequisites: 293A, and 292

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of seminar per week

Additional Details
Subject/Course Level: Biophysics/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only. This is part two of a year long series course. Upon completion, the final grade will be applied to both parts of the series.
