Information and Data Science: MIDS

The Master of Information and Data Science (MIDS) is an online, part-time professional degree program that prepares students to work effectively with heterogeneous, real-world data and to extract insights from the data using the latest tools and analytical methods. The program emphasizes the importance of asking good research or business questions as well as the ethical and legal requirements of data privacy and security.

The Fifth Year Master of Information and Data Science (Fifth Year MIDS) is a customized pathway in the MIDS program that is designed for students who have just completed their undergraduate education at UC Berkeley.

Students attend weekly live ("synchronous") sessions with classmates and instructors via an online platform as well as engaging with online ("asynchronous") videos and assignments on their own time.

The curriculum includes research design and applications for data and analysis, statistics for data science, data engineering, applied machine learning, data visualization, and data ethics. MIDS features a project-based approach to learning and encourages the pragmatic application of a variety of different tools and methods to solve complex problems.

Graduates of the program will be able to:

1. Imagine new and valuable uses for large datasets;
2. Retrieve, organize, combine, clean, and store data from multiple sources;
3. Apply appropriate data mining, statistical analysis, and machine learning techniques to detect patterns and make predictions;
4. Design visualizations and effectively communicate findings; and
5. Understand the ethical and legal requirements of data privacy and security.

The I School also offers a master's in Information Management and Systems (MIMS) (http://guide.berkeley.edu/graduate/degree-programs/information-management-systems/), a master's in Information and Cybersecurity (MICS) (http://guide.berkeley.edu/graduate/degree-programs/information-cybersecurity/), and a Ph.D in Information Science. (http://guide.berkeley.edu/graduate/degree-programs/information-management-systems-phd/)

Admission to the University

Applying for Graduate Admission

Thank you for considering UC Berkeley for graduate study! UC Berkeley offers more than 120 graduate programs representing the breadth and depth of interdisciplinary scholarship. A complete list of graduate academic departments, degrees offered, and application deadlines can be found on the Graduate Division website (http://grad.berkeley.edu/programs/list/).

Prospective students must submit an online application to be considered for admission, in addition to any supplemental materials specific to the program for which they are applying. The online application can be found on the Graduate Division website (http://grad.berkeley.edu/admissions/).

Admission Requirements

The minimum graduate admission requirements are:

1. A bachelor’s degree or recognized equivalent from an accredited institution;
2. A satisfactory scholastic average, usually a minimum grade-point average (GPA) of 3.0 (B) on a 4.0 scale; and
3. Enough undergraduate training to do graduate work in your chosen field.

For a list of requirements to complete your graduate application, please see the Graduate Division’s Admissions Requirements page (https://grad.berkeley.edu/admissions/steps-to-apply/requirements/). It is also important to check with the program or department of interest, as they may have additional requirements specific to their program of study and degree. Department contact information can be found here (http://guide.berkeley.edu/graduate/degree-programs/).

Where to apply?

Visit the Berkeley Graduate Division application page (http://grad.berkeley.edu/admissions/apply/).

Admission to the Program

Applications are evaluated holistically on a combination of prior academic performance, work experience, essays, letters of recommendation, and goals that are a good fit for the program.

The UC Berkeley School of Information seeks students with the academic abilities to meet the demands of a rigorous graduate program.

To be eligible to apply to the Master of Information and Data Science program, applicants must meet the following requirements:

1. A bachelor’s degree or its recognized equivalent from an accredited institution.
2. Superior scholastic record, normally well above a 3.0 GPA.
3. A high level of quantitative ability as conveyed by significant work experience that demonstrates your quantitative abilities and/or academic coursework that demonstrates quantitative aptitude.
4. A high level of analytical reasoning ability and a problem-solving mindset as demonstrated in academic and/or professional performance.
5. A working knowledge of fundamental concepts including: data structures, algorithms and analysis of algorithms, and linear algebra.
6. Proficiency in programming languages, such as Python or Java, demonstrated by prior work experience or advanced coursework.
7. The ability to communicate effectively, as demonstrated by academic performance, professional experience, and/or strong essays that demonstrate effective communication skills.
8. Not Required: Official Graduate Record Examination (GRE) (http://www.princetonreview.com/mids/) General Test or Graduate Management Admission Test (GMAT) (http://www.princetonreview.com/mids/) scores. As of Fall 2020, we have
Information and Data Science: MIDS

eliminated the GRE/GMAT requirement. We recommend you put your
time and effort towards the required application materials.
• Official Test of English as a Foreign Language (TOEFL) (http://www.toefl.org/) scores for applicants whose academic work has been
in a country other than the US, UK, Australia, or English-speaking
Canada.

Note: Admission to the Fifth Year Master of Information and
Data Science program requires that the applicant complete their
undergraduate education at UC Berkeley in the year prior to starting the
program. Consequently, applicants are not required to submit TOEFL
scores. However, applicants are required to submit three letters of
recommendation and additional short answer essays.

For more information and application instructions, prospective MIDS
students should visit the datascience@berkeley Admissions Overview
(http://datascience.berkeley.edu/admissions/admissions-overview/) and
prospective 5th Year MIDS students should visit the I School Admissions
page (https://www.ischool.berkeley.edu/programs/5th-year-mids/apply/).

Unit Requirements
The Master of Information and Data Science is designed to be completed
in 20 months, but other options are available to complete the program.
You will complete 27 units of course work over an average of five
terms, taking a maximum of 9 units each term. Courses are divided
into foundation courses (15 units), advanced courses (9 units), and
a synthetic capstone (3 units). Students also complete an Immersion
Program.

The unit and coursework requirements for the Fifth Year Master of
Information and Data Science are identical, although fifth-year students
are also encouraged and supported to seek internships to complement
and encourage professional development.

DATASCI 210 Capstone 3

Immersion
The Immersion Program provides MIDS students with the opportunity
to meet faculty and peers in person. Students have the opportunity to
gain on-the-ground perspectives from faculty and industry leaders, meet
with data science professionals, and soak up more of the School of
Information (I School) culture. Offered three times a year, each three- to
two-day immersion will be custom-crafted to deliver additional learning,
networking, and community-building opportunities.

Please refer to the datascience@berkeley website (http://
datascience.berkeley.edu/academics/curriculum/) for more information.

Please note: DATASCI courses are only available for Information and Data Science (MIDS) students.

DATASCI 200 Introduction to Data Science Programming 3 Units

Terms offered: Spring 2024, Fall 2023, Summer 2023

This fast-paced course gives students fundamental Python knowledge necessary for advanced work in data science. Students gain frequent practice writing code, building to advanced skills focused on data science applications. We introduce a range of Python objects and control structures, then build on these with classes on object-oriented programming. A major programming project reinforces these concepts, giving students insight into how a large piece of software is built and experience managing a full-cycle development project. The last section covers two popular Python packages for data analysis, Numpy and Pandas, and includes an exploratory data analysis.

Introduction to Data Science Programming: Read More [+]

Objectives & Outcomes

Student Learning Outcomes: Be able to design, reason about, and implement algorithms for solving computational problems.
Be able to generate an exploratory analysis of a data set using Python.
Be able to navigate a file system, manipulate files, and execute programs using a command line interface.
Be able to test and effectively debug programs.
Be fluent in Python syntax and familiar with foundational Python object types.
Be prepared for further programming challenges in more advanced data science courses.
Know how to read, manipulate, describe, and visualize data using the Numpy and Pandas packages.
Know how to use Python to extract data from different type of files and other sources.
Understand how to manage different versions of a project using Git and how to collaborate with others using Github.
Understand the principles of functional programming.
Understand the principles of object-oriented design and the process by which large pieces of software are developed.

Rules & Requirements

Prerequisites: MIDS students only

Hours & Format

Fall and/or spring: 14 weeks - 3 hours of lecture per week
Summer: 14 weeks - 3 hours of lecture per week

DATASCI 201 Research Design and Applications for Data and Analysis 3 Units

Terms offered: Spring 2024, Fall 2023, Summer 2023

Introduces the data sciences landscape, with a particular focus on learning data science techniques to uncover and answer the questions students will encounter in industry. Lectures, readings, discussions, and assignments will teach how to apply disciplined, creative methods to ask better questions, gather data, interpret results, and convey findings to various audiences. The emphasis throughout is on making practical contributions to real decisions that organizations will and should make. Course must be taken for a letter grade to fulfill degree requirements.

DATASCI 201A Research Design and Applications for Data and Analysis for Early Career Data Scientists 4 Units
Terms offered: Fall 2023, Fall 2022
Introduces the data sciences landscape, with a focus on learning data science techniques to uncover and answer questions students will encounter in industry. Lectures, readings, discussions, and assignments will teach how to apply methods to ask better questions, gather data, interpret results, and convey findings to various audiences. The emphasis is on making practical contributions to real decisions that organizations make. This 4-credit version of the course is designed for early-career learners in our 5th Year MIDS pathway. It provides additional attention to introducing professional and business knowledge and skills, and providing students with opportunities to apply and reflect on learning how to become a data science professional.

Research Design and Applications for Data and Analysis for Early Career Data Scientists: Read More [+]

Objectives & Outcomes

Student Learning Outcomes: By the completion of this course, students will be able to Apply techniques and approaches focused on building work relationships and engaging in interactions that align with organizational goals.
By the completion of this course, students will be able to Assess and select data and the data collection methods that best fit a specific outcome or need.
By the completion of this course, students will be able to Demonstrate an understanding of foundational approaches to project management and strategic thinking by imagining, planning, and designing a data science project from start to finish.
By the completion of this course, students will be able to Devise effective research questions and apply them to analytic processes that lead to actionable insight and strategic decisions.
By the completion of this course, students will be able to Identify and describe effective teamwork skills, practices, and characteristics of an effective workplace or project team.
By the completion of this course, students will be able to Justify and defend an analytical approach—descriptive, predictive, or explanatory—to inform efficient decision making.
By the completion of this course, students will be able to Understand and apply successful communication strategies and methods (written, spoken, and visual) for teams and for various stakeholders within an organization with different contextual requirements and expectations, including summarizing and presenting key ideas effectively for various stakeholders.
By the completion of this course, students will be able to Understand key principles that affect human decision-making processes, such as biases and contextual concerns (e.g., ethical and legal) that affect human decision-making processes and apply knowledge of those principles throughout the course to mitigate biases, facilitate better decision making, and improve communication.
By the completion of this course, students will be able to describe the role that data science as a domain and as a set of practices and processes plays in decision making made by people in organizations, and establish an awareness of common social structures, practices, norms and expectations in data science organizations, teams, and workplaces.

Rules & Requirements

Prerequisites: 5th Year MIDS students only

DATASCI 203 Statistics for Data Science 3 Units
Terms offered: Spring 2024, Fall 2023, Summer 2023
This course provides students with a foundational understanding of classical statistics within the broader context of data science. Topics include exploratory analysis and descriptive statistics, probability theory and the foundations of statistical modeling, estimators, hypothesis testing, and classical linear regression. Causal inference and reproducibility issues are treated briefly. Students will learn to apply the most common statistical procedures correctly, checking assumptions and responding appropriately when they appear violated; to evaluate the design of a study and how the variables being measured relate to research questions; and to analyze real-world data using the open-source language R.

Statistics for Data Science: Read More [+]

Rules & Requirements

Prerequisites: MIDS students only. Intermediate competency in calculus is required. A college-level linear algebra course is recommended

Hours & Format

Fall and/or spring: 14 weeks - 3 hours of lecture per week
Summer: 14 weeks - 3 hours of lecture per week

**DATASCI 205 Fundamentals of Data Engineering 3 Units**

Terms offered: Spring 2024, Fall 2023, Summer 2023

Storing, managing, and processing datasets are foundational processes in data science. This course introduces the fundamental knowledge and skills of data engineering that are required to be effective as a data scientist. This course focuses on the basics of data pipelines, data pipeline flows and associated business use cases, and how organizations derive value from data and data engineering. As these fundamentals of data engineering are introduced, learners will interact with data and data processes at various stages in the pipeline, understand key data engineering tools and platforms, and use and connect critical technologies through which one can construct storage and processing architectures that underpin data science applications.

**Rules & Requirements**

**Prerequisites:** MIDS students only. Intermediate competency in Python, C, or Java, and competency in Linux, GitHub, and relevant Python libraries. Knowledge of database management including SQL is recommended but not required.

**Credit Restrictions:** Students will receive no credit for DATASCI W205 after completing DATASCI 205. A deficient grade in DATASCI W205 may be removed by taking DATASCI 205.

**Hours & Format**

**Fall and/or spring:** 14 weeks - 3 hours of lecture per week

**Summer:** 14 weeks - 3 hours of lecture per week

**Additional Details**

**Subject/Course Level:** Data Science/Graduate

**Grading:** Letter grade.

**DATASCI 207 Applied Machine Learning 3 Units**

Terms offered: Spring 2024, Fall 2023, Summer 2023

Machine learning is a rapidly growing field at the intersection of computer science and statistics concerned with finding patterns in data. It is responsible for tremendous advances in technology, from personalized product recommendations to speech recognition in cell phones. This course provides a broad introduction to the key ideas in machine learning. The emphasis will be on intuition and practical examples rather than theoretical results, though some experience with probability, statistics, and linear algebra will be important. Course must be taken for a letter grade to fulfill degree requirements.

**Rules & Requirements**

**Prerequisites:** MIDS students only. DATASCI 201 or DATASCI 201A and DATASCI 203. Intermediate competency in Python, C, or Java, and competency in Linux, GitHub, and relevant Python libraries. Linear algebra is recommended.

**Hours & Format**

**Fall and/or spring:** 14 weeks - 3 hours of lecture per week

**Summer:** 14 weeks - 3 hours of lecture per week

**Additional Details**

**Subject/Course Level:** Data Science/Graduate

**Grading:** Letter grade.

**Formerly known as:** Data Science W207

Applied Machine Learning: Read Less [-]
DATASCI 209 Data Visualization 3 Units
Terms offered: Spring 2024, Fall 2023, Summer 2023
Visualization enhances exploratory analysis as well as efficient communication of data results. This course focuses on the design of visual representations of data in order to discover patterns, answer questions, convey findings, drive decisions, and provide persuasive evidence. The goal is to give you the practical knowledge you need to create effective tools for both exploring and explaining your data. Exercises throughout the course provide a hands-on experience using relevant programming libraries and software tools to apply research and design concepts learned.

Data Visualization: Read More [+]

Objectives & Outcomes

Student Learning Outcomes: Analyze data using exploratory visualization.
Build commonly requested types of visualizations as well as more advanced visualizations using ground-up customization.
Constructively critique existing visualizations, identifying issues of integrity as well as excellence.
Create useful, performant visualizations from real-world data sources, including large and complex datasets.
Design aesthetically pleasing static and interactive visualizations with perceptually appropriate forms and encodings.
Improve your own work through usability testing and iteration, with attention to context.
Select appropriate tools for building visualizations, and gain skills to evaluate new tools.

Rules & Requirements

Prerequisites: MIDS students only. DATASCI 200. Intermediate competency in Python, C, or Java, and competency in Linux, GitHub, and relevant Python libraries. Recommended: experience with HTML, CSS, and JavaScript, or ability to learn new programming languages quickly.
If Python is the only programming language you know, you will probably benefit from learning the basics of web development with JavaScript in advance.

Hours & Format

Fall and/or spring: 14 weeks - 3 hours of lecture per week
Summer: 14 weeks - 3 hours of lecture per week

DATASCI 210 Capstone 3 Units
Terms offered: Spring 2024, Fall 2023, Summer 2023
The capstone course will cement skills learned throughout the MIDS program – both core data science skills and “soft skills” like problem-solving, communication, influencing, and management – preparing students for success in the field. The centerpiece is a semester-long group project in which teams of students propose and select project ideas, conduct and communicate their work, receive and provide feedback (in informal group discussions as well as formal class presentations), and deliver compelling presentations along with a Web-based final deliverable. Includes relevant readings, case discussions, and real-world examples and perspectives from panel discussions with leading data science experts and industry practitioners.

Capstone: Read More [+]

Rules & Requirements

Prerequisites: MIDS students only. DATASCI 200, DATASCI 201, DATASCI 203, DATASCI 205, and DATASCI 207. Must be taken in final term of the MIDS program

Credit Restrictions: Students will receive no credit for DATASCI W210 after completing DATASCI 210. A deficient grade in DATASCI W210 may be removed by taking DATASCI 210.

Hours & Format

Fall and/or spring: 14 weeks - 3 hours of lecture per week
Summer: 14 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Data Science/Graduate
Grading: Letter grade.
Formerly known as: Data Science W210
Capstone: Read Less [-]
DATASCI 210A Capstone for Early Career Data Scientists 4 Units
Terms offered: Fall 2023
In the Capstone class, students combine technical, analytical, interpretive, problem-solving, and strategic thinking dimensions to design and execute a full end-to-end data science project. Students will develop their technical and non-technical skills as data scientists who focus on real-world and impactful applications and situations. The final project provides a learning opportunity and “sandbox” to integrate all skills and concepts learned throughout the MIDS program and provides experience and hands-on tools in formulating and implementing an impactful and compelling project. Students are evaluated on their ability to work in a dynamic team environment to collaborate, co-develop, and communicate their work.

Student Learning Outcomes: Read More [+]

Objectives & Outcomes

Student Learning Outcomes: Construct and perform persuasive, informative and understandable written, spoken, or visualized narratives that concisely convey findings, solutions, and applications of data-driven approaches that have been incorporated in project work.

Demonstrate an ability to integrate and synthesize knowledge and skills gained through other courses in the program (critical technical, analytical, strategic thinking, problem-solving, communication, influencing, and management skills) in developing and implementing a capstone project that addresses a key data science problem.

Demonstrate proficiency in applying technical and analytical skills towards the collection, storage, and analysis of data towards problem-solving and project execution. Assess and select data and the data collection methods that best fit the specific outcome or need of a project or problem space.

Demonstrate proficiency in identifying target user audience for the Capstone project and conduct expert and target user interviews to validate problem framing, scoping, and hypothesis.

Demonstrate proficiency in selecting the appropriate data science and machine learning approaches for a specific project and perform model evaluation to demonstrate the efficacy of the model and its value to the target users.

Effectively engage in a process of teamwork, feedback from peers, instructors and experts, and informed iteration that mirrors the challenges and opportunities of applying data science in a realistic organizational setting. Conduct self-assessment of professional development and leadership.

Identify and articulate a problem space to address through application of data driven methods, approaches and practices that include an understanding of stakeholders, social contexts, potential impact, and potential obstacles.

Identify and describe effective teamwork skills, practices, and characteristics of an effective workplace or project team, including distribution of team tasks and duties. Understand and apply successful communication strategies for teams, for various stakeholders within an organization with different contextual requirements and expectations. Understand, incorporate, and practice integrated understanding of what it takes to imagine, design, and execute a data science project from start to finish.

Rules & Requirements

Prerequisites: 5th Year MIDS students only, DATASCI 200, DATASCI 201A, DATASCI 203, DATASCI 205, and DATASCI 207. Must be taken in the final term of the 5th Year MIDS program.

DATASCI 221 Modern Data Applications 3 Units
Terms offered: Spring 2024
This is a multidisciplinary graduate course that synthesizes data management, data economy, and machine learning & AI strategy and research, product innovation, business and enterprise technology strategy, industry analysis, organizational decision-making and data-driven leadership into one course offering. The course provides strategic thinking tools, analytical frameworks, and real-world case examples to help students explore and investigate modern data applications and opportunities in multiple domains and industries. Students are required to participate in weekly sessions and write response pieces as well as a final paper and presentation evaluating one defining application or emerging technology in machine learning/AI end-to-end.

Student Learning Outcomes: Read More [+]

Objectives & Outcomes

Student Learning Outcomes: Anticipate the opportunities and problems likely to be encountered in building and working with any given data application as business and technology requirements as well as secular trends evolve.

Create a strategic business case for a new or emerging data application or data science / machine learning use case.

Develop strategic and business thinking in various data science domains.

Evaluate data science applications and opportunities across a number of situations and domains.

Learn a set of qualitative models and analytical frameworks to evaluate any modern data application and emerging trends in machine learning and AI.

Understand “modern data stacks” and how to manage and use data as an asset in an organization for responsible decision making.

Rules & Requirements

Prerequisites: MIDS students only. DATASCI 205 and DATASCI 207. Students can take DATASCI 205 concurrently with DATASCI 221; students may not drop DATASCI 205 and remain in DATASCI 221. Students cannot take DATASCI 221 concurrently with DATASCI 210.

Hours & Format

DATASCI 233 Privacy Engineering 3 Units
Terms offered: Spring 2024, Fall 2023, Spring 2023
This course surveys privacy mechanisms applicable to systems engineering, with a particular focus on the inference threat arising due to advancements in artificial intelligence and machine learning. We will briefly discuss the history of privacy and compare two major examples of general legal frameworks for privacy from the United States and the European Union. We then survey three design frameworks of privacy that may be used to guide the design of privacy-aware information systems. Finally, we survey threat-specific technical privacy frameworks and discuss their applicability in different settings, including statistical privacy with randomized responses, anonymization techniques, semantic privacy models, and technical privacy mechanisms.

**DATASCI 241 Experiments and Causal Inference 3 Units**

Terms offered: Spring 2024, Fall 2023, Summer 2023

This course introduces students to experimentation in the social sciences. This topic has increased considerably in importance since 1995, as researchers have learned to think creatively about how to generate data in more scientific ways, and developments in information technology have facilitated the development of better data gathering. Key to this area of inquiry is the insight that correlation does not necessarily imply causality. In this course, we learn how to use experiments to establish causal effects and how to be appropriately skeptical of findings from observational data.

Experiments and Causal Inference: Read More [+]

**Rules & Requirements**

**Prerequisites:** MIDS students only. DATASCI 201 or DATASCI 201A and DATASCI 203

**Credit Restrictions:** Students will receive no credit for DATASCI W241 after completing DATASCI 241. A deficient grade in DATASCI W241 may be removed by taking DATASCI 241.

**Hours & Format**

**Fall and/or spring:** 14 weeks - 3 hours of lecture per week

**Summer:** 14 weeks - 3 hours of lecture per week

**Additional Details**

**Subject/Course Level:** Data Science/Graduate

**Grading:** Letter grade.

**Formerly known as:** Data Science W241

Experiments and Causal Inference: Read Less [-]

---

**DATASCI 255 Machine Learning Systems Engineering 3 Units**

Terms offered: Spring 2024, Fall 2023, Summer 2023

This course provides learners hands-on data management and systems engineering experience using containers, cloud, and Kubernetes ecosystems based on current industry practice. The course will be project-based with an emphasis on how production systems are used at leading technology-focused companies and organizations. During the course, learners will build a body of knowledge around data management, architectural design, developing batch and streaming data pipelines, scheduling, and security around data including access management and auditability. We’ll also cover how these tools are changing the technology landscape.

Machine Learning Systems Engineering: Read More [+]

**Objectives & Outcomes**

**Student Learning Outcomes:**

- Construct, measure, and identify metrics relating to performance of a system in order to optimize costs and latency of serving inferences for machine learning models.
- Demonstrate understanding of Kubernetes for management of machine learning models.
- Describe the difference between a monolithic and microservice architecture, assess and select appropriate use cases for each.
- Describe the differences between a development and production system particularly for Machine Learning where the boundaries are blurry.
- Know when to leverage a cache for serving machine learning models to reduce load on production systems.
- Understand continuous integration and continuous delivery (CI/CD) pipeline for automated code deployment, particularly for ML models.
- Understand how stateful systems add complexities to systems engineering.
- Understand how to serve machine learning models over an API in real-time.

**Rules & Requirements**

**Prerequisites:** MIDS students only. DATASCI 205 and DATASCI 207. We assume you are familiar with generating predictions from a trained machine learning model. Familiarity with command line (Bash), Python, and Git. We assume you have a working knowledge of SSH, Ports, and familiarity with networking concepts such as DNS

**Hours & Format**

**Fall and/or spring:** 14 weeks - 3 hours of lecture per week

**Summer:** 14 weeks - 3 hours of lecture per week

**Additional Details**

**Subject/Course Level:** Data Science/Graduate

**Grading:** Letter grade.

Machine Learning Systems Engineering: Read Less [-]
DATASCI 261 Machine Learning at Scale 3 Units
Terms offered: Spring 2024, Fall 2023, Summer 2023
This course teaches the underlying principles required to develop scalable machine learning pipelines for structured and unstructured data at the petabyte scale. Students will gain hands-on experience in Apache Hadoop and Apache Spark.
Machine Learning at Scale: Read More [+]

Rules & Requirements
Prerequisites: MIDS students only. DATASCI 205 and DATASCI 207. Intermediate programming skills in an object-oriented language (e.g., Python)

Credit Restrictions: Students will receive no credit for DATASCI W261 after completing DATASCI 261. A deficient grade in DATASCI W261 may be removed by taking DATASCI 261.

DATASCI 266 Natural Language Processing with Deep Learning 3 Units
Terms offered: Spring 2024, Fall 2023, Summer 2023
Understanding language is fundamental to human interaction. Our brains have evolved language-specific circuitry that helps us learn it very quickly; however, this also means that we have great difficulty explaining how exactly meaning arises from sounds and symbols. This course is a broad introduction to linguistic phenomena and our attempts to analyze them with machine learning. We will cover a wide range of concepts with a focus on practical applications such as information extraction, machine translation, sentiment analysis, and summarization.
Natural Language Processing with Deep Learning: Read More [+]

Rules & Requirements
Prerequisites: MIDS students only. DATASCI 207

Credit Restrictions: Students will receive no credit for DATASCI W266 after completing DATASCI 266. A deficient grade in DATASCI W266 may be removed by taking DATASCI 266.

Hours & Format
Fall and/or spring: 14 weeks - 3 hours of lecture per week
Summer: 14 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Data Science/Graduate
Grading: Letter grade.
Instructor: Gillick

DATASCI 271 Statistical Methods for Discrete Response, Time Series, and Panel Data 3 Units
Terms offered: Spring 2024, Fall 2023, Summer 2023
A continuation of DATASCI 203, this course trains data science students to apply more advanced methods from regression analysis and time series models. Central topics include linear regression, causal inference, identification strategies, and a wide-range of time series models that are frequently used by industry professionals. Throughout the course, we emphasize choosing, applying, and implementing statistical techniques to capture key patterns and generate insight from data. Students who successfully complete this course will be able to distinguish between appropriate and inappropriate techniques given the problem under consideration, the data available, and the given timeframe.

Statistical Methods for Discrete Response, Time Series, and Panel Data: Read More [+]

Rules & Requirements

Prerequisites: MIDS students only. DATASCI 203 taken in Fall 2016 or later and completed with a grade of B+ or above. Strong familiarity with classical linear regression modeling; strong hands-on experience in R; working knowledge of calculus and linear algebra; familiarity with differential calculus, integral calculus and matrix notations

Credit Restrictions: Students will receive no credit for DATASCI W271 after completing DATASCI 271. A deficient grade in DATASCI W271 may be removed by taking DATASCI 271.

Hours & Format

Fall and/or spring: 14 weeks - 3 hours of lecture per week
Summer: 14 weeks - 3 hours of lecture per week

DATASCI 281 Computer Vision 3 Units
Terms offered: Spring 2024, Fall 2023, Summer 2023
This course introduces the theoretical and practical aspects of computer vision, covering both classical and state of the art deep-learning based approaches. This course covers everything from the basics of the image formation process in digital cameras and biological systems, through a mathematical and practical treatment of basic image processing, space/frequency representations, classical computer vision techniques for making 3-D measurements from images, and modern deep-learning based techniques for image classification and recognition.

Computer Vision: Read More [+]

Objectives & Outcomes

Student Learning Outcomes: Be able to read and understand research papers in the computer-vision literature.

Build computer vision systems to solve real-world problems.

Properly formulate problems with the appropriate mathematical and computational tools.

Understand the building blocks of classical computer vision techniques.

Understand the building blocks of modern computer vision techniques (primarily artificial neural networks).

Understand the process by which images are formed and represented.

Rules & Requirements

Prerequisites: MIDS students only. DATASCI 207. We assume you are familiar with machine learning techniques. You should also be comfortable with linear algebra, which we'll use for vector representations and when we discuss deep learning. Intermediate programming skills in an object-oriented language (e.g., Python). This course will use Python for all examples, exercises, and assignments

Hours & Format

Fall and/or spring: 14 weeks - 3 hours of lecture per week
Summer: 14 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Data Science/Graduate

Grading: Letter grade.

DATASCI 290 Special Topics 3 Units
Terms offered: Spring 2024, Fall 2023, Summer 2023
Specific topics, may vary from section to section, year to year.
Special Topics: Read More [+]

Rules & Requirements
Prerequisites: MIDS students only
Repeat rules: Course may be repeated for credit when topic changes. Students may enroll in multiple sections of this course within the same semester.

Hours & Format
Fall and/or spring: 14 weeks - 3 hours of lecture per week
Summer: 14 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Data Science/Graduate
Grading: Letter grade.

DATASCI 293 Data Science Professional Practicum 1 Unit
Terms offered: Summer 2023
This course provides academic scaffolding for graduate students in data science who are engaged in internships, practicums, or relevant types of independent research while progressing toward a master’s degree. We focus on developing skills in project management, organizational navigation, and professional communication related to data science. In addition, the practicum explores various applications of data science methods in industrial, academic, governmental, and nonprofit settings. We discuss common challenges facing data scientists at work and possible approaches to addressing these challenges.

Data Science Professional Practicum: Read More [+]

Objectives & Outcomes

Student Learning Outcomes: Assess the organizational culture of a company, governmental body, or non-governmental organization, especially as it relates to data-driven decision making and ability to adopt or employ data science methods
Connect academic knowledge about data science to real-world professional contexts
Evaluate the effectiveness of a variety of data science methods when deployed in organizational situations
Integrate the student’s own individual professional goals with the organization’s needs relevant to the internship or practicum experience
Reflect critically on the internship or practicum experience

Rules & Requirements
Prerequisites: 5th Year MIDS students only

Hours & Format
Fall and/or spring: 14 weeks - 1 hour of lecture per week
Summer: 14 weeks - 1 hour of lecture per week

Additional Details
Subject/Course Level: Data Science/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.
