Information Management and Systems: MIMS

The Master of Information Management and Systems (MIMS) program is a two-year full-time program, designed to train students in the skills needed to succeed as information professionals. Such professionals must be familiar with the theory and practice of storing, organizing, retrieving, and analyzing information in a variety of settings in business, the public sector, and the academic world. Technical expertise alone is not sufficient for success; I School graduates will be expected to perform and manage a multiplicity of information-related tasks.

Graduates of the MIMS program will be able to:

- Identify and address user and stakeholder information and resource needs in context.
- Make and assess information design decisions iteratively.
- Intentionally organize collections of information and other resources to support human and/or machine-based interactions and services.
- Understand and apply foundational principles and debates of information law, policy, and ethics.
- Analyze complex relationships and practical choices at the intersection of technical design, policy frameworks, and ethics.
- Understand and apply fundamental principles and debates of information economics.
- Understand and apply architectural, computational, and algorithmic thinking and principles of concurrency to the design of information systems.
- Scope, plan, and manage open-ended projects, both individually and in teams.
- Present findings and conclusions persuasively.

Such a profession is inherently interdisciplinary, requiring aspects of computer science, cognitive science, psychology, sociology, economics, business, law, library/information studies, and communications.

The I School also offers a master’s in Information and Data Science (http://guide.berkeley.edu/graduate/degree-programs/information-data-science/) (MIDS), a master’s in Information and Cybersecurity (http://guide.berkeley.edu/graduate/degree-programs/information-cybersecurity/) (MICS), and a doctoral degree (PhD) program in Information Management and Systems (http://guide.berkeley.edu/graduate/degree-programs/information-management-systems-phd/).

Admission to the University

Applying for Graduate Admission

Thank you for considering UC Berkeley for graduate study! UC Berkeley offers more than 120 graduate programs representing the breadth and depth of interdisciplinary scholarship. A complete list of graduate academic departments, degrees offered, and application deadlines can be found on the Graduate Division website (http://grad.berkeley.edu/programs/list/).

Prospective students must submit an online application to be considered for admission, in addition to any supplemental materials specific to the program for which they are applying. The online application can be found on the Graduate Division website (http://grad.berkeley.edu/admissions/).

Admission Requirements

The minimum graduate admission requirements are:

1. A bachelor’s degree or recognized equivalent from an accredited institution;
2. A satisfactory scholastic average, usually a minimum grade-point average (GPA) of 3.0 (B) on a 4.0 scale; and
3. Enough undergraduate training to do graduate work in your chosen field.

For a list of requirements to complete your graduate application, please see the Graduate Division’s Admissions Requirements page (https://grad.berkeley.edu/admissions/steps-to-apply/requirements/). It is also important to check with the program or department of interest, as they may have additional requirements specific to their program of study and degree. Department contact information can be found here (http://guide.berkeley.edu/graduate/degree-programs/).

Where to apply?

Visit the Berkeley Graduate Division application page (http://grad.berkeley.edu/admissions/apply/).

Admission to the MIMS Program

The I School’s Master of Information Management and Systems (MIMS) program welcomes students from a diverse set of backgrounds; some will be technically educated, some educated in the humanities and social sciences. Our goal each year is to bring in a talented class of students from a broad range of academic and professional backgrounds.

Applications are evaluated holistically on a combination of grade point average, GRE/GMAT score, work experience, statement of purpose, and letters of recommendation. As much as possible, applicants are judged on a combination of these factors. A minimum of two years of job experience is preferred, although not required. All successful applicants must have statements of purpose that demonstrate goals and interests consistent with the mission of the I School.

To be eligible to apply to the Master of Information Management and Systems program, applicants must meet the following requirements:

- A bachelor’s degree or its recognized equivalent from an accredited institution.
- Superior scholastic record, normally well above a 3.0 GPA.
- Successful work experience in relevant fields.
- Clear indication of professional career goals and reasons for seeking the degree, described in the Statement of Purpose.
- For applicants whose academic work has been in a language other than English, the Test of English as a Foreign Language (TOEFL) (http://www.toefl.org/) or International English Language Testing System (IELTS) (http://www.ielts.org/).
- Programming competency and proficiency.
- (Not Required) Results of the General Test of the Graduate Record Examination (GRE) (http://www.gre.org/) or the Graduate...
Management Admission Test (GMAT) (http://www.mba.com/mba/thegmat/).

To Apply
For further information and application instructions, please visit the School of Information Application Instructions page (http://www.ischool.berkeley.edu/admissions/).

Unit Requirements
The Master of Information Management and Systems (MIMS) program requires at least 48 semester units of study. The first year of the program consists mostly of a core curriculum; the second year involves further study in core areas along with additional electives, with the expectation that the student will specialize in particular aspects of information management and systems, as well as complete a final project requirement.

Internship Participation

During the summer between the two years, students are strongly encouraged to participate in an internship program in order to use their newly acquired skills in real-world settings. Assistance in arranging internships will be provided whenever possible, but the ultimate responsibility of obtaining the internship will be that of the student. Past internships have been in corporate, academic, government, and nonprofit institutions.

Please refer to the School of Information website (http://www.ischool.berkeley.edu/programs/mims/degreerequirements/) for more information.

Expand all course descriptions [+]
Collapse all course descriptions [-]
INFO 202 Information Organization and Retrieval 3 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This course introduces the intellectual foundations of information organization and retrieval: conceptual modeling, semantic representation, vocabulary and metadata design, classification, and standardization, as well as information retrieval practices, technology, and applications, including computational processes for analyzing information in both textual and non-textual formats.

INFO 203 Social Issues of Information 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course is designed to be an introduction to the topics and issues associated with information and information technology and its role in society. Throughout the semester we will consider both the consequence and impact of technologies on social groups and on social interaction and how society defines and shapes the technologies that are produced. Students will be exposed to a broad range of applied and practical problems, theoretical issues, as well as methods used in social scientific analysis. The four sections of the course are: 1) theories of technology in society, 2) information technology in workplaces 3) automation vs. humans, and 4) networked sociability.

INFO 205 Information Law and Policy 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course uses examples from various commercial domains—retail, health, credit, entertainment, social media, and biosensing/quantified self—to explore legal and ethical issues including freedom of expression, privacy, research ethics, consumer protection, information and cybersecurity, and copyright. The class emphasizes how existing legal and policy frameworks constrain, inform, and enable the architecture, interfaces, data practices, and consumer facing policies and documentation of such offerings; and, fosters reflection on the ethical impact of information and communication technologies and the role of information professionals in legal and ethical work.

INFO 206A Introduction to Programming and Computation 2 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This course introduces the basics of computer programming that are essential for those interested in computer science, data science, and information management. Students will write their own interactive programs (in Python) to analyze data, process text, draw graphics, manipulate images, and simulate physical systems. Problem decomposition, program efficiency, and good programming style are emphasized throughout the course.

Instructor: Mulligan

Information Management and Systems: MIMS
INFO 206B Introduction to Data Structures and Analytics 2 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
The ability to represent, manipulate, and analyze structured data sets is foundational to the modern practice of data science. This course introduces students to the fundamentals of data structures and data analysis (in Python). Best practices for writing code are emphasized throughout the course. This course forms the second half of a sequence that begins with INFO 106. It may also be taken as a stand-alone course by any student that has sufficient Python experience.

Introduction to Data Structures and Analytics: Read More [+]

Rules & Requirements
Prerequisites: INFO 206A or equivalent, or permission of instructor
Credit Restrictions: Course must be completed for a letter grade to fulfill degree requirements.

Hours & Format
Fall and/or spring: 7.5 weeks - 4 hours of lecture per week

Additional Details
Subject/Course Level: Information/Graduate
Grading: Letter grade.

Formerly known as: Information 206

Introduction to Data Structures and Analytics: Read Less [-]

INFO 214 User Experience Research 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course addresses concepts and methods of user experience research, from understanding and identifying needs, to evaluating concepts and designs, to assessing the usability of products and solutions. We emphasize methods of collecting and interpreting qualitative data about user activities, working both individually and in teams, and translating them into design decisions. Students gain hands-on practice with observation, interview, survey, focus groups, and expert review. Team activities and group work are required during class and for most assignments. Additional topics include research in enterprise, consulting, and startup organizations, lean/agile techniques, mobile research approaches, and strategies for communicating findings.

User Experience Research: Read Less [-]

INFO 213 Introduction to User Experience Design 4 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This course will provide an introduction to the field of Human-Computer Interaction (HCI). Students will learn to apply design thinking to User Experience (UX) design, prototyping, & evaluation. The course will also cover special topic areas within HCI.

Introduction to User Experience Design: Read More [+]

Objectives & Outcomes
Course Objectives: The course objective is to provide students interested in web and mobile Product Design with skills, practice, and experience that will prepare them for careers in product design and design-related roles.

Rules & Requirements
Prerequisites: DES INV 15 or COMPSCI 160 or INFO 213 AND INFO 214; or permission of the instructor. Students can take INFO 214 and INFO 215 concurrently, but students may not drop INFO 214 and remain in INFO 215

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Information/Graduate
Grading: Letter grade.
Formerly known as: Information Systems and Management 215

Product Design Studio: Read Less [-]
INFO 217A Human-Computer Interaction (HCI) Research 3 Units
Terms offered: Spring 2024, Fall 2021, Fall 2020
This course is a graduate-level introduction to HCI research. Students will learn to conduct original HCI research by reading and discussing research papers while collaborating on a semester-long research project. Each week the class will focus on a theme of HCI research and review foundational and cutting-edge research relevant to that theme. The class will focus on the following areas of HCI research: ubiquitous computing, social computing, critical theory, and human-AI interaction. In addition to these research topics the class will introduce common qualitative and quantitative methodologies in HCI research.

INFO 218 Concepts of Information 3 Units
Terms offered: Spring 2024, Spring 2022, Spring 2020
As it's generally used, "information" is a collection of notions, rather than a single coherent concept. In this course, we'll examine conceptions of information based in information theory, philosophy, social science, economics, and history. Issues include: How compatible are these conceptions; can we talk about "information" in the abstract? What work do these various notions play in discussions of literacy, intellectual property, advertising, and the political process? And where does this leave "information studies" and "the information society"?

INFO 225 Leadership and Management 3 Units
Terms offered: Fall 2023, Fall 2021, Fall 2020
This course focuses on the practice of leadership, collaboration, and people management in contemporary, distributed, information and technology-rich organizations. Not just for potential people managers, this course is derived from the premise that a foundation in leadership, management, and collaboration is essential for individuals in all roles, at any stage of their career. To build this foundation we will take a hybrid approach, engaging literature from disciplines such as social psychology, management, and organizational behavior, as well as leveraging case studies and practical exercises. The course will place a special emphasis on understanding and reacting to social dynamics in workplace hierarchies and teams.

INFO 233 Social Psychology and Information Technology 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
Discusses application of social psychological theory and research to information technologies and systems; we focus on sociological social psychology, which largely focuses on group processes, networks, and interpersonal relationships. Information technologies considered include software systems used on the internet such as social networks, email, and social games, as well as specific hardware technologies such as mobile devices, computers, wearables, and virtual/augmented reality devices. We examine human communication practices, through the lens of different social psychology theories, including: symbolic interaction, identity theories, social exchange theory, status construction theory, and social networks and social structure theory.
INFO 234 Information Technology Economics, Strategy, and Policy 3 Units
Terms offered: Spring 2024, Spring 2022, Spring 2021
This course applies economic tools and principles, including game theory, industrial organization, information economics, and behavioral economics, to analyze business strategies and public policy issues surrounding information technologies and IT industries. Topics include: economics of information goods, services, and platforms; economics of information and asymmetric information; economics of artificial intelligence, cybersecurity, data privacy, and peer production; strategic pricing; strategic complements and substitutes; competition and antitrust; Internet industry structure and regulation; network cascades, network formation, and network structure.

Information Technology Economics, Strategy, and Policy: Read More [+]

Objectives & Outcomes

Course Objectives:
INFO234 is a graduate level course in the school's topical area of Information Economics and Policy, and can be taken by the masters and doctoral students to satisfy their respective degree requirements.

Student Learning Outcomes:
Students will learn to identify, describe, and analyze business strategies and public policy issues of particular relevance to the information industry. Students will learn and apply economic tools and principles to analyze phenomena such as platform competition, social epidemics, and peer production, and current policy issues such as network neutrality and information privacy. Through integrated assignments and project work, the students will apply the theoretical concepts and analytic tools learned in lectures and readings to develop and evaluate a business model, product, or service of their choosing, e.g., a start-up idea they are pursuing.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Subject/Course Level: Information/Graduate
Grading: Letter grade.
Instructor: Chuang

INFO 239 Technology and Delegation 3 Units
Terms offered: Fall 2021, Fall 2019, Fall 2018
The introduction of technology increasingly delegates responsibility to technical actors, often reducing traditional forms of transparency and challenging traditional methods for accountability. This course explores the interaction between technical design and values including: privacy, accessibility, fairness, and freedom of expression. We will draw on literature from design, science and technology studies, computer science, law, and ethics, as well as primary sources in policy, standards and source code. We will investigate approaches to identifying the value implications of technical designs and use methods and tools for intentionally building in values at the outset.

INFO 241 Experiments and Causal Inference 3 Units
Terms offered: Spring 2024, Fall 2022, Spring 2022
This course introduces students to experimentation in data science. Particular attention is paid to the formation of causal questions, and the design and analysis of experiments to provide answers to these questions. This topic has increased considerably in importance since 1995, as researchers have learned to think creatively about how to generate data in more scientific ways, and developments in information technology has facilitated the development of better data gathering.

Subject/Course Level: Information/Graduate
Grading: Letter grade.
Instructor: Hearst

INFO 251 Applied Machine Learning 4 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
Provides a theoretical and practical introduction to modern techniques in applied machine learning. Covers key concepts in supervised and unsupervised machine learning, including the design of machine learning experiments, algorithms for prediction and inference, optimization, and evaluation. Students will learn functional, procedural, and statistical programming techniques for working with real-world data.
Applied Machine Learning: Read More [+]

Objectives & Outcomes

Student Learning Outcomes: • Effectively design, execute, and critique experimental and non-experimental methods from statistics, machine learning, and econometrics.
• Implement basic algorithms on structured and unstructured data, and evaluate the performance of these algorithms on a variety of real-world datasets.
• Understand the difference between causal and non-causal relationships, and which situations and methods are appropriate for both forms of analysis.
• Understand the principles, advantages, and disadvantages of different algorithms for supervised and unsupervised machine learning.

Rules & Requirements

Prerequisites: INFO 206B, or equivalent course in Python programming; INFO 271B, or equivalent graduate-level course in statistics or econometrics; or permission of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Subject/Course Level: Information/Graduate
Grading: Letter grade.
Instructor: Blumenstock

Applied Machine Learning: Read Less [-]
INFO 253A Front-End Web Architecture 3 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This course is a survey of technologies that power the user interfaces of web applications on a variety of devices today, including desktop, mobile, and tablet devices. This course will delve into some of the core Front-End languages and frameworks (HTML/CSS/JS/React/Redux), as well as the underlying technologies enable web applications (HTTP, URI, JSON). The goal of this course is to provide an overview of the technical issues surrounding user interfaces powered by the web today, and to provide a solid and comprehensive perspective of the Web's constantly evolving landscape.

INFO 253B Back-End Web Architecture 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course is a survey of web technologies that are used to build back-end systems that enable rich web applications. Utilizing technologies such as Python, Flask, Docker, RDBMS/NoSQL databases, and Spark, this class aims to cover the foundational concepts that drive the web today. This class focuses on building APIs using micro-services that power everything from content management systems to data engineering pipelines that provide insights by processing large amounts of data. The goal of this course is to provide an overview of the technical issues surrounding back-end systems today, and to provide a solid and comprehensive perspective of the web's constantly evolving landscape.

Privacy Engineering: Read Less [-]

INFO 255 Privacy Engineering 3 Units
Terms offered: Spring 2024, Spring 2023
The course overviews a broad number of paradigms of privacy from a technical point of view. The course is designed to assist system engineers and information systems professionals in getting familiar with the subject of privacy engineering and train them in implementing those mechanisms. In addition, the course is designed to coach those professionals to critically think about the strengths and weaknesses of the different privacy paradigms. These skills are important for cybersecurity professionals and enable them to effectively incorporate privacy-awareness in the design phase of their products.
Privacy Engineering: Read More [+]

Objectives & Outcomes

Course Objectives:
Critique the strengths and weaknesses of the different privacy paradigms
Describe the different technical paradigms of privacy that are applicable for systems engineering
Implement such privacy paradigms, and embed them in information systems during the design process and the implementation phase
Stay updated about the state of the art in the field of privacy engineering

Rules & Requirements
Credit Restrictions: Students will receive no credit for INFO 255 after completing INFO 255. A deficient grade in INFO 255 may be removed by taking INFO 255.

Hours & Format
Fall and/or spring: 15 weeks - 1.5 hours of lecture per week

Additional Details
Subject/Course Level: Information/Graduate
Grading: Letter grade.
INFO 256 Applied Natural Language Processing 3 Units
Terms offered: Fall 2023, Fall 2021, Spring 2019
This course examines the use of natural language processing as a set of methods for exploring and reasoning about text as data, focusing especially on the applied side of NLP — using existing NLP methods and libraries in Python in new and creative ways. Topics include part-of-speech tagging, shallow parsing, text classification, information extraction, incorporation of lexicons and ontologies into text analysis, and question answering. Students will apply and extend existing software tools to text-processing problems.

Applied Natural Language Processing: Read More [+]

Rules & Requirements

Prerequisites: INFO 206A and INFO 206B or proficient programming in Python (programs of at least 200 lines of code). Proficient with basic statistics and probabilities

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

INFO 259 Natural Language Processing 4 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course introduces students to natural language processing and exposes them to the variety of methods available for reasoning about text in computational systems. NLP is deeply interdisciplinary, drawing on both linguistics and computer science, and helps drive much contemporary work in text analysis (as used in computational social science, the digital humanities, and computational journalism). We will focus on major algorithms used in NLP for various applications (part-of-speech tagging, parsing, coreference resolution, machine translation) and on the linguistic phenomena those algorithms attempt to model. Students will implement algorithms and create linguistically annotated data on which those algorithms depend.

Natural Language Processing: Read More [+]

INFO C262 Theory and Practice of Tangible User Interfaces 4 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This course explores the theory and practice of Tangible User Interfaces, a new approach to Human Computer Interaction that focuses on the physical interaction with computational media. The topics covered in the course include theoretical framework, design examples, enabling technologies, and evaluation of Tangible User Interfaces. Students will design and develop experimental Tangible User Interfaces using physical computing prototyping tools and write a final project report.

Theory and Practice of Tangible User Interfaces: Read More [+]

INFO 288 Big Data and Development 3 Units
Terms offered: Spring 2024, Spring 2021, Spring 2019
As new sources of digital data proliferate in developing economies, there is the exciting possibility that such data could be used to benefit the world’s poor. Through a careful reading of recent research and through hands-on analysis of large-scale datasets, this course introduces students to the opportunities and challenges for data-intensive approaches to international development. Students should be prepared to dissect, discuss, and replicate academic publications from several fields including development economics, machine learning, information science, and computational social science. Students will also conduct original statistical and computational analysis of real-world data.

Rules & Requirements
Prerequisites: Students are expected to have prior graduate training in machine learning, econometrics, or a related field.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Information/Graduate
Grading: Letter grade.
Instructor: Blumenstock

INFO 289 Public Interest Cybersecurity: The Citizen Clinic Practicum 3 Units
Terms offered: Spring 2024, Fall 2023, Spring 2023
This course provides students with real-world experience assisting politically vulnerable organizations and persons around the world to develop and implement sound cybersecurity practices. In the classroom, students study basic theories and practices of digital security, intricacies of protecting largely under-resourced organizations, and tools needed to manage risk in complex political, sociological, legal, and ethical contexts. In the clinic, students work in teams supervised by Clinic staff to provide direct cybersecurity assistance to civil society organizations. We emphasize pragmatic, workable solutions that take into account the unique needs of each partner organization.

Rules & Requirements
Repeat rules: Course may be repeated for credit with instructor consent.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Information/Graduate
Grading: Letter grade.

INFO 293 Information Management Practicum
0.5 Units
Terms offered: Fall 2016, Summer 2016 10 Week Session, Spring 2016
This course is designed to help School of Information graduate students maximize their internship, practicum, or independent research experiences.

Objectives & Outcomes

Course Objectives: Experience the practical application of your academic knowledge to real-world professional contexts;
Gain insight into an organization and how one might make a valuable contribution;
Reflect on the information the experience has provided, to see if it fits within one's personal value set and work/life manifestos.
Try out various professional activities to see when you are in ‘flow’;

Student Learning Outcomes: Assess the organizational culture of a company, governmental body, or non-governmental organization
Connect academic knowledge about information management to real-world professional contexts
Evaluate the effectiveness of a variety of information science techniques when deployed in organizational situations
Integrate the student's own individual professional goals with the organization's needs relevant to the internship or practicum
Reflect critically on the internship or practicum experience

Rules & Requirements
Prerequisites: Consent of a Head Graduate Adviser for the School of Information
Repeat rules: Course may be repeated for credit without restriction.

INFO 294 Doctoral Research and Theory Workshop 2 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
An intensive weekly discussion of current and ongoing research by Ph.D. students with a research interest in issues of information (social, legal, technical, theoretical, etc.). Our goal is to focus on critiquing research problems, theories, and methodologies from multiple perspectives so that we can produce high-quality, publishable work in the interdisciplinary area of information research. Circulated material may include dissertation chapters, qualifying papers, article drafts, and/or new project ideas. We want to have critical and productive discussion, but above all else we want to make our work better: more interesting, more accessible, more rigorous, more theoretically grounded, and more like the stuff we enjoy reading.

Rules & Requirements
Prerequisites: PhD students only
Repeat rules: Course may be repeated for credit without restriction.

INFO 295 Doctoral Colloquium 1 Unit
Terms offered: Fall 2023, Spring 2023, Fall 2022
Colloquia, discussion and readings designed to introduce students to the range of interests of the school.

Rules & Requirements
Prerequisites: Ph.D. standing in the School of Information
