Graduate work leading to the PhD degree is offered in the Department of Physics. Students may petition for an MA degree on their way to a PhD. Please note that the department will not consider applications from students who intend to work toward the MA degree only. In certain cases, students may petition for a terminal MA degree. Research is a major part of the PhD program, and research opportunities exist across the full spectrum of theoretical and experimental physics, including astrophysics and cosmology; atomic, molecular and optical physics; biophysics; condensed matter; elementary particles and fields; fusion and plasma; low-temperature physics; mathematical physics; nuclear physics; quantum information; space physics; and statistical mechanics.

At the Lawrence Berkeley National Laboratory, extensive opportunities exist for research in astrophysics, elementary particle and nuclear physics, condensed matter physics and materials science, and plasma and nuclear physics. Space physics, interplanetary studies, solar plasma research, physics of the upper atmosphere, and cosmological problems are pursued both in the Physics Department and at the Space Sciences Laboratory.

Admission to the University

Applying for Graduate Admission

Thank you for considering UC Berkeley for graduate study! UC Berkeley offers more than 120 graduate programs representing the breadth and depth of interdisciplinary scholarship. A complete list of graduate academic departments, degrees offered, and application deadlines can be found on the Graduate Division website (http://grad.berkeley.edu/programs/list/).

Prospective students must submit an online application to be considered for admission, in addition to any supplemental materials specific to the program for which they are applying. The online application can be found on the Graduate Division website (http://grad.berkeley.edu/admissions/).

Admission Requirements

The minimum graduate admission requirements are:

1. A bachelor’s degree or recognized equivalent from an accredited institution;
2. A satisfactory scholastic average, usually a minimum grade-point average (GPA) of 3.0 (B) on a 4.0 scale; and
3. Enough undergraduate training to do graduate work in your chosen field.

For a list of requirements to complete your graduate application, please see the Graduate Division's Admissions Requirements page (https://grad.berkeley.edu/admissions/steps-to-apply/requirements/). It is also important to check with the program or department of interest, as they may have additional requirements specific to their program of study and degree. Department contact information can be found here (http://guide.berkeley.edu/graduate/degree-programs/).

Where to apply?

Visit the Berkeley Graduate Division application page (http://grad.berkeley.edu/admissions/apply/).
Normative Time Requirements
The normative time for completing a PhD in Physics is six years.

Physics electives:
Graduate 11
Graduate/Upper Division 8

Graduate students are required to take a minimum of 38 units of approved upper division or graduate elective courses (excluding any upper division courses required for the undergraduate major). The department requires that students take the following courses which total 19 units: Physics 209 (Classical Electromagnetism), Physics 211 (Equilibrium Statistical Physics) and Physics 221A-221B (Quantum Mechanics). Thus, the normative program includes an additional 19 units (five semester courses) of approved upper division or graduate elective courses. At least 11 units must be in the 200 series courses. Some of the 19 elective units could include courses in mathematics, biophysics, astrophysics, or from other science and engineering departments. Physics 290, 295, 299, 301, and 602 are excluded from the 19 elective units. Physics 209, 211 and 221A-221B must be completed for a letter grade (with a minimum average grade of B). No more than one-third of the 19 elective units may be fulfilled by courses graded Satisfactory, and then only with the approval of the Department. Entering students are required to enroll in Physics 209 and 221A in the fall semester of their first year and Physics 211 and 221B in the spring semester of their first year. Exceptions to this requirement are made for 1) students who have not yet passed all sections of the exam, and not ranking relative to other students, will determine whether that student has passed or failed the section. In other words, there is no predetermined percentage of students to pass/fail the exam.

A student’s individual performance on each section of the exam, and not ranking relative to other students, will determine whether that student has passed or failed the section. In other words, there is no predetermined percentage of students to pass/fail the exam.

Students are encouraged, but not required, to attempt the examination during their first semester. Students are required to have attempted all of the written sections in their second semester. The status of students who have not yet passed all sections of the preliminary examination will be reviewed by a faculty committee each semester, beginning in the student’s third semester, and recommendations of further action will be made. The Department Chair must approve exceptions to this schedule; all exceptions, except those due to illness or emergency, must be approved in advance.

The academic record of a student in their third semester who has not passed all four written sections will be reviewed. Near the beginning of the third semester (as prelim exam results become available) a faculty committee, in consultation with the student’s faculty mentor, will review the student’s academic record and performance on the prelims to determine whether a sufficient breadth of undergraduate physics has been demonstrated. This review may include meeting with the student to ask questions to further assess the student’s understanding of undergraduate physics, focusing primarily although not exclusively on the not-yet-passed sections of the exam, to discuss the student’s background and how best to address remaining deficiencies. If their determination is that the student has a sufficient breadth of undergraduate physics, the
A faculty committee will then review the student’s efforts towards returning to good academic progress at the beginning of the fourth semester. This 4th semester review may also include meeting with the student to ask questions to assess the student’s understanding of undergraduate physics. This faculty committee will review the student’s entire academic record — including performance on the preliminary exam, coursework, and intended research plans — and recommend to the Department Chair whether the student is making sufficient academic progress and may be allowed to proceed with research. The Head Graduate Adviser or Department Chair will report the results to the Graduate Division. If requirements established in the 3rd semester review include undergraduate courses taken in the fourth semester, this 4th semester review can be deferred until the grades in these courses are determined, but in no case can this review be extended past the end of the student’s 4th semester. This review is not intended to create additional requirements, but to determine if previous requirements have been met, and in particular should not require any further attempts at passing any section of the preliminary exam. The intent of this fourth-semester review by the faculty committee is to determine whether a student has mastered sufficient undergraduate physics to start PhD level research by the end of the 2nd year. If the committee concludes that such mastery is not present, they will recommend to the Department Chair that the student be asked to leave the program due to inadequate progress towards the PhD.

A revision in this schedule can be granted, for one or more sections of the preliminary exam, for any student with an incomplete undergraduate physics education as determined by consultation between the student and the student’s faculty mentor. Both the Head Graduate Advisor and the Department Chair must approve this revised schedule. Any student exercising this option is expected to take one or more undergraduate physics courses at UC Berkeley during the first one or two semesters. This student should follow the regular schedule outlined above for any sections of the exam not affected by the revised schedule, and is allowed to attempt the delayed section(s) at the start of their first one or two semesters for practice, in which case the student would not be required to repeat any sections that have been passed during this period. The student would then be expected to take all sections of the exam not yet passed at the beginning of the 3rd semester, and to repeat any unpassed sections at the start of the 4th semester. A faculty committee will be asked to assess this student following this exam if there are still sections not passed, following guidelines above, and can either determine that the student has demonstrated a sufficient breadth of undergraduate physics, and hence has passed the prelim exam, or to recommend that the student be sent a warning letter with specific requirements and a timeline for being returned to making sufficient academic progress; the most likely requirement and timeline for this is to be asked to study over the following summer and to attempt the still unpassed sections a final time at the start of the 5th semester. The intent of this 4th and potentially 5th semester review by the faculty committee is that a student shall either be determined to have mastered sufficient undergraduate physics to start PhD level research by the start of their 3rd year, or else be asked to leave the program due to inadequate progress towards the PhD. Delays in this decision beyond the start of the 3rd year are highly discouraged and will only be considered under exceptional circumstances.

Qualifying Examination

Within 2-3 semesters of beginning research, the Department expects students to take the University’s Oral Qualifying Examination covering his or her research field and related areas. This exam is required for advancement to PhD candidacy, and signifies that the student is prepared and qualified to undertake research, not that the student has already completed a significant body of work towards the PhD. It is therefore expected to occur for most students in the 3rd year, and no later than the 4th year. A student is considered to have begun research when they first register for Physics 299 or fill out the department advising form showing that a research advisor has accepted the student for PhD work, at which time the research advisor becomes responsible for guidance and mentoring of the student. The examination is administered by a four-member committee (consisting of three Physics Department and one outside faculty member, including the research advisor) approved by the Graduate Division on behalf of the Graduate Council, and may be repeated once at the recommendation of the examining committee. The Department expects that all committees include at least one theorist and one experimentalist. For students with advisors from outside the department or who are not members of the Academic Senate (e.g., with appointments at LBL or SSL), permission for a five-member committee may be requested from Grad Division to allow both the non-faculty and faculty advisor to be on the committee; in this case, approval of the proposed research by the Head Graduate Advisor and the Chair of the Department must also be obtained before the student takes their qualifying exam.

Rules and requirements associated with the Qualifying Exam are set by the Graduate Division on behalf of the Graduate Council. The committee membership and the conduct of the exam are therefore subject to Graduate Division approval. The exam is oral and lasts 2-3 hours. The Graduate Division specifies that the purpose of the Qualifying Exam is “to ascertain the breadth of the student’s comprehension of fundamental facts and principles that apply to at least three subjects areas related to the major field of study and whether the student has the ability to think incisively and critically about the theoretical and the practical aspects of these areas.” Grad Division also states that this oral qualifying exam serves a significant additional function. “Not only teaching, but the formal interaction with one’s students and colleagues at colloquia, annual meetings of professional societies and the like, often require the ability to synthesize rapidly, organize clearly, and argue cogently in an oral setting.... It is consequently necessary for the University to ensure that a proper examination is given incorporating [these skills].”

The Qualifying Exam requires that the student, in consultation with his or her advisor, identify three topics which in the Physics Department are expected to be a proposed Thesis Topic, an Area of Research, and a General Area of Research. The General Area of Research is taken to be the sub-field within physics (e.g. astrophysics, biophysics, particle physics, condensed matter physics); the Area of Research to be a still broad but more narrowly defined field within the sub-field (e.g. magnetism, or QCD). For fields where these choices are not obvious,
the student should suggest appropriately broad topics contiguous to their Thesis Topic. The choice of topics is subject to the approval of the Physics Department Head Graduate Adviser, per Graduate Council Requirements. Qualifying Exams in the Physics Department begin with a presentation from the student that is expected to last approximately, but no more than, 45 minutes, during and after which questions related to the presentation are typically asked. The presentation should focus on the student's research goals and necessary background material, including the proposed Thesis Topic and the Area of Research that encompasses the thesis topic, as well as a proposed schedule for finishing the PhD and goals/milestones in that schedule. After this presentation, following a short break if desired, members of the committee will further question the student both about the presentation itself and about the broader subject areas included in the General Area of Research, testing the student's “ability to think incisively and critically about the theoretical and the practical aspects of these areas”. The Department expects these questions to be related to the student's research field, but to be broad in nature rather than narrowly related to the thesis itself. Ability to give a coherent and organized presentation and to answer questions on the three topics in an oral setting is also required for passing this exam. Note that adjustments may be made on the basis of campus policies for cases in which an otherwise able individual is prevented from meeting an oral requirement by a physical disability.

Physics

PHYSICS C201 Introduction to Nano-Science and Engineering 3 Units
Terms offered: Spring 2015, Spring 2013, Spring 2012
A three-module introduction to the fundamental topics of Nano-Science and Engineering (NSE) theory and research within chemistry, physics, biology, and engineering. This course includes quantum and solid-state physics; chemical synthesis, growth fabrication, and characterization techniques; structures and properties of semiconductors, polymer, and biomedical materials on nanoscales; and devices based on nanostructures. Students must take this course to satisfy the NSE Designated Emphasis core requirement.

PHYSICS C202 Astrophysical Fluid Dynamics 4 Units
Terms offered: Fall 2023, Spring 2023, Spring 2022
Principles of gas dynamics, self-gravitating fluids, magnetohydrodynamics and elementary kinetic theory. Aspects of convection, fluid oscillations, linear instabilities, spiral density waves, shock waves, turbulence, accretion disks, stellar winds, and jets.

PHYSICS C203 Computational Nanoscience 3 Units
A multidisciplinary overview of computational nanoscience for both theorists and experimentalists. This course teaches the main ideas behind different simulation methods; how to decompose a problem into "simulatable" constituents; how to simulate the same thing two different ways: knowing what you are doing and why thinking is still important; the importance of talking to experimentalists; what to do with your data and how to judge its validity; why multiscale modeling is both important and nonsense.

PHYSICS C218 Modern Optical Microscopy for the Modern Biologist
3 Units
Terms offered: Fall 2023, Spring 2023, Spring 2022
This course is intended for graduate students in the early stages of their thesis research who are contemplating using modern microscopy tools as part of their work. It endeavors to cut through the confusion of the wide array of new imaging methods, with a practical description of the pros and cons of each. In addition to providing an intuitive physical understanding how these microscopes work, the course will offer hands on experience with cutting-edge microscopes where students will be able to see firsthand how different imaging modalities perform on their own samples, and where they will be able to access computational tools for the visualization and analysis of their data.
Modern Optical Microscopy for the Modern Biologist: Read More [+]

Rules & Requirements
Credit Restrictions: Students will receive no credit for MCELLBI 205 after completing MCELLBI 205, or MCELLBI 205. A deficient grade in MCELLBI 205 may be removed by taking MCELLBI 205, or MCELLBI 205.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Physics/Graduate
Grading: Letter grade.

Advanced Atomic, Molecular, and Optical Physics: Read Less [-]

PHYSICS 238A Modern Atomic Physics 3 Units
Terms offered: Spring 2023
Atomic, molecular, and optical physics is at once a precise and quantitative description of atoms, molecules and light; a generalized toolbox for manipulating and probing quantum systems; and an active field of contemporary research. This course exposes students to all these aspects. Lectures will cover topics such as atomic structure and spectra, the interaction of atoms with static and time-varying electromagnetic fields, some topics in quantum electrodynamics, methods of resonant manipulation of quantum systems, and resonance optics. Through lectures, discussion sessions, and homework assignments, students encounter contemporary research foci.
Modern Atomic Physics: Read More [+]

Rules & Requirements
Prerequisites: Physics 110A, Physics 137A, Physics 137B, or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Physics/Graduate
Grading: Letter grade.

Modern Atomic Physics: Read Less [-]

PHYSICS 240A Quantum Theory of Solids 4 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
Excitations and interactions in solids; crystal structures, symmetries, Bloch’s theorem; energy bands; electron dynamics; impurity states; lattice dynamics, phonons; many-electron interactions; density functional theory; dielectric functions, conductivity and optical properties.
Quantum Theory of Solids: Read More [+]

Rules & Requirements
Prerequisites: 141A-141B and 221A-221B or equivalents, or consent of instructor; 240A is prerequisite to 240B

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Physics/Graduate
Grading: Letter grade.

Quantum Theory of Solids: Read Less [-]
PHYSICS 240B Quantum Theory of Solids 4 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
Optical properties, excitons; electron-phonon interactions, polaron; quantum oscillations, Fermi surfaces; magnetoresistance; quantum Hall effect; transport processes, Boltzmann equation; superconductivity, BCS theory; many-body perturbation theory, Green's functions.
Quantum Theory of Solids: Read More [+]
Rules & Requirements
Prerequisites: 141A-141B and 221A-221B or equivalents, or consent of instructor; 240A is prerequisite to 240B
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Physics/Graduate
Grading: Letter grade.
Quantum Theory of Solids: Read Less [-]

PHYSICS 242A Theoretical Plasma Physics 4 Units
Terms offered: Fall 2023, Fall 2021, Fall 2019
Analysis of plasma behavior according to the Vlasov, Fokker-Planck equations, guiding center and hydromagnetic descriptions. Study of equilibria, stability, linear and nonlinear waves, transport, and laser-plasma interactions.
Theoretical Plasma Physics: Read More [+]
Rules & Requirements
Prerequisites: Physics 142, or consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Physics/Graduate
Grading: Letter grade.
Theoretical Plasma Physics: Read Less [-]

PHYSICS 242B Theoretical Plasma Physics 4 Units
Terms offered: Spring 2024, Spring 2020, Spring 2016
Analysis of plasma behavior according to the Vlasov, Fokker-Planck equations, guiding center and hydromagnetic descriptions. Study of equilibria, stability, linear and nonlinear waves, transport, and laser-plasma interactions.
Theoretical Plasma Physics: Read More [+]
Rules & Requirements
Prerequisites: Physics 142, or consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Physics/Graduate
Grading: Letter grade.
Theoretical Plasma Physics: Read Less [-]

PHYSICS 250 Special Topics in Physics 2 - 4 Units
Terms offered: Spring 2024, Fall 2021, Fall 2019
Topics will vary from semester to semester. See Department of Physics announcements.
Special Topics in Physics: Read More [+]
Rules & Requirements
Prerequisites: Consent of instructor
Repeat rules: Course may be repeated for credit with instructor consent.
Hours & Format
Fall and/or spring: 15 weeks - 2-4 hours of lecture per week
Additional Details
Subject/Course Level: Physics/Graduate
Grading: Letter grade.
Special Topics in Physics: Read Less [-]
PHYSICS 251 Introduction to Graduate Research in Physics 1 Unit
Terms offered: Fall 2023, Fall 2022, Fall 2021
A survey of experimental and theoretical research in the Department of Physics, designed for first-year graduate students. One regular meeting each week with supplementary visits to experimental laboratories. Meetings include discussions with research staff.

Introduction to Graduate Research in Physics: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing in Department of Physics or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture per week

Additional Details
Subject/Course Level: Physics/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.

PHYSICS C254 High Energy Astrophysics 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022, Fall 2018
Basic physics of high energy radiation processes in an astrophysics environment. Cosmic ray production and propagation. Applications selected from pulsars, x-ray sources, supernovae, interstellar medium, extragalactic radio sources, quasars, and big-bang cosmologies.

High Energy Astrophysics: Read More [+]

Rules & Requirements
Prerequisites: 201 or consent of instructor. 202 recommended

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Physics/Graduate
Grading: Letter grade.

Instructors: Boggs, Quataert

Formerly known as: Physics C254, Astronomy C254
Also listed as: ASTRON C254

High Energy Astrophysics: Read Less [-]

PHYSICS C285 Theoretical Astrophysics Seminar 1 Unit
Terms offered: Spring 2024, Fall 2023, Fall 2022, Fall 2019
The study of theoretical astrophysics.

Theoretical Astrophysics Seminar: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture per week

Additional Details
Subject/Course Level: Physics/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.

Instructor: Quataert

Also listed as: ASTRON C285

Theoretical Astrophysics Seminar: Read Less [-]

PHYSICS 288 Bayesian Data Analysis and Machine Learning for Physical Sciences 4 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
The course design covers data analysis and machine learning, highlighting their importance to the physical sciences. It covers data analysis with linear and nonlinear regression, logistic regression, and gaussian processes. It covers concepts in machine learning such as unsupervised and supervised regression and classification learning. It develops Bayesian statistics and information theory, covering concepts such as information, entropy, posteriors, MCMC, latent variables, graphical models and hierarchical Bayesian modeling. It covers numerical analysis topics such as integration and ODE, linear algebra, multi-dimensional optimization, and Fourier transforms.

Bayesian Data Analysis and Machine Learning for Physical Sciences: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Physics/Graduate
Grading: Letter grade.
