Public Health

The School of Public Health offers two professional degrees, the Master of Public Health (MPH) and the Doctor of Public Health (DrPH). The School of Public Health also offers academic degrees in Biostatistics (http://guide.berkeley.edu/graduate/degree-programs/biostatistics/) (MA, PhD), Environmental Health Sciences (http://guide.berkeley.edu/graduate/degree-programs/environmental-health-sciences/) (MS, PhD), Epidemiology (http://guide.berkeley.edu/graduate/degree-programs/epidemiology/) (MS, PhD), Health and Medical Sciences (http://guide.berkeley.edu/graduate/degree-programs/health-medical-sciences-program/) (MS), Health Policy (http://guide.berkeley.edu/graduate/degree-programs/health-policy/) (PhD), and Infectious Diseases & Immunity (http://guide.berkeley.edu/graduate/degree-programs/infectious-diseases-immunity/) (PhD).

Master of Public Health (MPH)

The program of study leading to the professional MPH degree is based on a series of foundation courses. In addition, MPH students concentrate in one of the following areas: Biostatistics, Environmental Health Sciences, Epidemiology (11-month), Epidemiology/Biostatistics, Health and Social Behavior, Health Policy and Management, Global Health and Environment, Infectious Diseases and Vaccinology, Interdisciplinary, Maternal, Child, and Adolescent Health, and Public Health Nutrition.

The MPH degree is available in a residential program on campus or through an On-Campus/Online MPH (http://onlinemph.berkeley.edu/) program. The hybrid program requires two accelerated on-campus sessions, while all remaining coursework is completed online.

Doctor of Public Health (DrPH)

The Doctor of Public Health (DrPH) (http://sph.berkeley.edu/areas-study/doctor-public-health/) curriculum is based on a comprehensive body of knowledge in the field of public health and its related disciplines, and the investigation of significant problems in public health practice.

Admission to the University

Applying for Graduate Admission

Thank you for considering UC Berkeley for graduate study! UC Berkeley offers more than 120 graduate programs representing the breadth and depth of interdisciplinary scholarship. A complete list of graduate academic departments, degrees offered, and application deadlines can be found on the Graduate Division website (http://grad.berkeley.edu/programs/list/).

Prospective students must submit an online application to be considered for admission, in addition to any supplemental materials specific to the program for which they are applying. The online application can be found on the Graduate Division website (http://grad.berkeley.edu/admissions/).

Admission Requirements

The minimum graduate admission requirements are:

1. A bachelor’s degree or recognized equivalent from an accredited institution;
2. A satisfactory scholastic average, usually a minimum grade-point average (GPA) of 3.0 (B) on a 4.0 scale; and
3. Enough undergraduate training to do graduate work in your chosen field.

For a list of requirements to complete your graduate application, please see the Graduate Division’s Admissions Requirements page (https://grad.berkeley.edu/admissions/steps-to-apply/requirements/). It is also important to check with the program or department of interest, as they may have additional requirements specific to their program of study and degree. Department contact information can be found here (http://guide.berkeley.edu/graduate/degree-programs/).

Where to apply?

Visit the Berkeley Graduate Division application page (http://grad.berkeley.edu/admissions/apply/).

Curriculum

Effective: Fall 2023

Courses Required

Core courses in required subject areas below per approved lists:

Research or Professional Residency (1)

PB HLTH 297 Field Study in Public Health [1]

PB HLTH 293 Doctoral Seminar [1-4] (Required in 1, 2, and 3 years)

Leadership (1)

PB HLTH 290 Health Issues Seminars [1-4]

Public Health Ethics (1)

ESP M C254/ PB HLTH C202B Ethnic and Cultural Diversity in Health Status [4]

PB HLTH 200A Current issues in Public Health Ethics: Research and Practice [3]

PB HLTH 202B Ethnic and Cultural Diversity in Health Status [4]

Research Design & Methods (2)

EDUC 275B Data Analysis in Educational Research II [4]

EDUC 275G Hierarchical and Longitudinal Modeling [5]

PB HLTH C240B Biostatistical Methods: Computational Statistics with Applications in Biology and Medicine [4]

PB HLTH W211 Social and Behavioral Health Research: Introduction to Survey Methods [3]

PB HLTH 250B Epidemiologic Methods II [4]

PB HLTH W250 Epidemiologic Methods II: Part 1 [3]

PB HLTH W255 Epidemiologic Methods II: Part 2 [3]

PB HLTH 201F Course Not Available [3]

PB HLTH 218A Course Not Available

PB HLTH 218B Evaluation of Health and Social Programs [4]

PB HLTH 219A Course Not Available

PB HLTH 219C Community-Based Participatory Research in Public Health [3-4]

PB HLTH 219D Course Not Available [3]
These courses are all electives. They are suggested academic paths of student areas of interest:

1 Not required for HPM students.
2 Not a requirement for Environmental Health Science and Global Health and Environment MPH students.
3 All of our MPH are expected to fulfill this requirement through PB HLTH 291A (PB HLTH W289, PB HLTH 224A, or PB HLTH 223C) or an equivalent. Note: DrPH students fulfill their leadership requirements through PB HLTH 290: Foundations of Public Health Leadership and Practice.

Environmental Health Sciences Concentration (2 year program)

Courses Required for Concentration

Select at least one of the two options below for an essential methods course:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>PB HLTH 241</td>
<td>Intermediate Biostatistics for Public Health</td>
<td>4</td>
</tr>
<tr>
<td>PB HLTH 245</td>
<td>Introduction to Multivariate Statistics</td>
<td>4</td>
</tr>
</tbody>
</table>

EHS Core Courses:

<table>
<thead>
<tr>
<th>Course Code</th>

</tr>
</tbody>
</table>
Health Policy & Management Concentration (2 year program)

Courses Required for Concentration

- PB HLTH 220 Health Policy Decision-Making 3
- or PB HLTH 221 Health Policy Advocacy
- or PB HLTH 222 Global Health Policy
- or PB HLTH 223 Biomedical Innovation Policy
- or PB HLTH 224 Science and Policy for Environment and Health
- or PB HLTH 225 Health Policy Methods
- PB HLTH 226C Strategic Management and the Health Sector 3
- or PB HLTH 227 Organizational Behavior and Management in Health Care
- PB HLTH 228A Health Economics A 3-4
- & PB HLTH W226 Cost-Effectiveness Analysis
- or PB HLTH 228 Health Economics of Population Health
- PB HLTH 227A Health Care Finance 3
- PB HLTH 228A Analytic Methods for Health Policy and Management
- or PB HLTH 229 Impact Evaluation for Health Professionals
- PB HLTH 223D Foundations of Health Policy and Management 2
- PB HLTH 223E Capstone Seminar in Health Policy and Management 2

Additional courses from approved list

Health Policy & Management Concentration (11 month program)

Courses Required for Concentration

- PB HLTH 220 Health Policy Decision-Making 3
- or PB HLTH 221 Health Policy Advocacy
- or PB HLTH 222 Global Health Policy
- or PB HLTH 223 Biomedical Innovation Policy
- or PB HLTH 224 Science and Policy for Environment and Health
- or PB HLTH 225 Health Policy Methods
- PB HLTH 226C Strategic Management and the Health Sector 3
- or PB HLTH 227 Organizational Behavior and Management in Health Care
- PB HLTH 229 Independent Research (in lieu of practicum) 3-4

Infectious Diseases & Vaccinology Concentration

Core Requirements

- PB HLTH 260A Principles of Infectious Diseases 4
- PB HLTH 265 Public Health Immunology 3
- PB HLTH 264 Capstone Seminar in Infectious Diseases and Vaccinology 1
- PB HLTH 266C Healthcare-Associated Infections 2

Surveillance and Epidemiology Requirement (choose at least one of the following) 3

- PB HLTH 263 Molecular Epidemiology of Infectious Diseases 3
- or PB HLTH 264 Molecular Epidemiology of Infectious Diseases
- or PB HLTH 265 Zoonotic Diseases

IDV Advanced Courses-Electives (Choose at least two of the following) 3

- PB HLTH 262 Molecular and Cellular Basis of Bacterial Pathogenesis 3
- PB HLTH 265 Molecular Parasitology 3
- PB HLTH 266B Zoonotic Diseases 2
- PB HLTH 260E Molecular Epidemiology of Infectious Diseases 2
- PB HLTH 260F Infectious Disease Research in Developing Countries 2
- PB HLTH 236 U.S. Food and Drug Administration, Drug Development, and Public Health 2
- PB HLTH 290 Health Issues Seminars 1-4

1 Effective Fall 2022: Name Change to Capstone Seminar in Infectious Diseases
2 Substitution by another School of Public Health seminar related to Infectious Diseases may be acceptable as IDV Division Seminar.
3 If the particular PB HLTH courses listed above have used to fulfill one requirement, the same course cannot be used to fulfill other IDV program and Advanced course requirement

INTERDISCIPLINARY CONCENTRATION

REQUIRED CORE COURSES FOR 1-YEAR IPMPH MPH TRACK

Leadership Series (1)

- PB HLTH 223C Strategic Management and the Health Sector 3
- PB HLTH 224A Organizational Behavior and Management in Health Care 3
- PB HLTH 291A Preparation for Public Health Practice 2

Program Seminar Series (3)

- PB HLTH 292 Seminars for M.P.H. Students (Interdisciplinary Seminar) (summer, fall, spring) 1-4
E Electives from approved list in Interdisciplinary Handbook: https://publichealth.berkeley.edu/academics/interdisciplinary/interdisciplinary-mph (https://publichealth.berkeley.edu/academics/interdisciplinary/interdisciplinary-mph/)

2 Not required for any HPM MPH including MPP/MPH & MBA/MPH.

Concurrent Degree Requirements

Health & Social Behavior (MPH-MCP)

This concurrent degree program is designed to examine research, practice, and policy at the intersection of urban planning, policy and design with population health. Special attention is given to understanding the forces that are shaping urbanization in the US and globally, what
methods are necessary to analyze the relationships between urban policy and planning and human health, and to design and analyze interventions, frequently in partnership with community members and organizations, that can enhance urban health equity. The program prepares students for interdisciplinary careers in such fields as urban development, community health, housing, transportation, policymaking, and others. Graduates secure jobs working in government, international organizations, non-profits, academia/research and the private sector.

Candidates for this program are recruited and admitted through both the School of Public Health and the Department of City and Regional Planning. Students complete the core curriculum of each area, as well as the Health & Social Behavior track within MPH and an area of concentration in MCP. Visit the Public Health website (https://publichealth.berkeley.edu/academics/concurrent/city-planning-mcp-mph/) for more information.

Public Health and Journalism (MPH-MJ)

The three-year MPH/MJ allows students to combine their interests in public health, journalism, communications and media. The program is designed to produce public health professionals who are effective media practitioners and communicators as well as journalists with the training and knowledge necessary to cover public health and medical issues for online, print, broadcast and other media platforms.

Students select one of four public health concentrations (environmental health, infectious diseases, epidemiology/biostatistics, health and social behavior) and simultaneously develop their reporting and multimedia skills. The program explores how public health and journalism intersect and impact each other and prepares graduates for work in a variety of public health, media and journalism. Visit the Berkeley Journalism website (https://journalism.berkeley.edu/programs/concurrent-degree/) for more information.

Health Policy & Management (MPH-MBA)

The MBA/MPH program provides a deep competency in business administration, integrated with up-to-the-minute knowledge of health policy and management and other health care concepts. Students in this program pursue a wide range of interests including global health, entrepreneurship/start-ups, biotech/medtech, provider and payer initiatives, and social impact. This track allows students to have an extended period at Berkeley to take more electives, develop business and leadership skills in a range of applied health care settings, and have two distinct full-time summer internships.

This is a 2.5-year concurrent degree program, offered in a long-standing partnership between Berkeley Public Health and the Haas School of Business. It has been in existence for more than 35 years, so it has a large community of alumni and provides students access to the top-notch career services and faculty mentors from both Schools. Visit the Haas School of Business (https://mba.haas.berkeley.edu/academics/concurrent/city-planning-mcp-mph/) webpage for the MBA requirements.

### Health Policy & Management (MPH-MPP)

From the ACA to the FDA, to issues of equity and access, the health policy realm is highly visible and complex. It is for students who want to master the analytical skills that support policy analysis and decision-making, as well as gain a deeper understanding of key healthcare issues. Visit the Goldman School of Public Policy (https://gspp.berkeley.edu/programs/masters-of-public-policy-mpp/concurrent-degree-programs/public-policy-public-health/) webpage for the MPP requirements.

### MPH-MSW Options

Berkeley Public Health and the School of Social Welfare (http://socialwelfare.berkeley.edu/concurrent-masters-social-welfare-and-public-health/) offer two options that offer interdisciplinary preparation in the fields of social welfare and public health leading to the Master of Social Work and Master of Public Health degrees, generally in less time than it would take to obtain these degrees independently.

### Health & Social Behavior (MPH-MSW)

Public Health

Expand all course descriptions [+]Collapse all course descriptions [-]
PB HLTH 200 Foundations of Public Health Practice 1 Unit

Terms offered: Fall 2000, Fall 1999, Fall 1998

Today, graduates of public health programs must be prepared for evidence-based practice and the generation of practice-based evidence. They must have the ability to work in an increasingly interdisciplinary, interprofessional and cross-sectoral environment and settings.

Foundations of Public Health Practice introduces 12 areas of critical public health content to bridge the chasm between public health practice and theory. This course serves as an orientation to the various subjects, fields, and concepts that students will encounter in their education. While no single professional is expected to be an expert in all of these practice areas, everyone must be aware of their importance.

Foundations of Public Health Practice: Read More [+]

Rules & Requirements

Credit Restrictions: Students will receive no credit for PB HLTH 200 after completing PB HLTH 200. A deficient grade in PB HLTH 200 may be removed by taking PB HLTH 200.

Hours & Format

Fall and/or spring: 8 weeks - 1 hour of seminar per week

PB HLTH 200A Current issues in Public Health Ethics: Research and Practice 3 Units

This course seeks to examine the ethical challenges inherent in public health practice, research, and policy. It covers a range of topics in ethics through cases representative of different public health dilemmas. The cases considered include treating homeless people with TB, rationing medical care in the United States, conducting HIV studies of maternal-fetal transmission in Africa, managed care policies and setting priorities, the deaf community and cochlear implants, and the societal implications of genetic information. The goal is to enable students to develop an analytical methodology that has practical application for their future work.

PB HLTH 200J Health Policy and Management Breadth Course 2 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
Health policy and management applies concepts from economics, organizational behavior, and political science to the structure, financing, and regulation of the public health and health care delivery systems. This breadth course is designed to give MPH students a basic set of competencies in the domains central to the field.

Health Policy and Management Breadth Course: Read More [+]

Objectives & Outcomes

Course Objectives:
# Compare the organization, structure, and functions of health care, public health, and regulatory systems across US and selected international settings;
# Critically evaluate the role that structural racism plays in the US healthcare system; and
# Identify the core functions of public health and the essential services that together comprise public health;
# Identify the principal functions of health insurance, the structure of public and private health insurance plans, and trends in enrollment and expenditures;
# Understand and be able to discuss dimensions of the policy-making process, including the roles of ethics and evidence;
# Understand and explain basic principles and tools of finance, budgeting, and resource management;
# Understand the drivers of innovation in preventive, diagnostic, and therapeutic technologies;
# Understand various barriers to healthcare access, and discuss potential strategies to mitigate these challenges

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture and 1 hour of discussion per week

Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Bertozzi
Formerly known as: Public Health 200C1

PB HLTH 200K Environmental Health Sciences Breadth Course 2 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course will give an introduction to the major human and natural activities that lead to release of hazardous materials into the environment as well as the causal links between chemical, physical, and biological hazards in the environment and their impact on human health, including those related to climate change. The basic principles of toxicology, exposure assessment, risk assessment, risk perception, and environmental health policy will be presented. The overall role of environmental risks in the pattern of human disease, both nationally and internationally, will be covered.

PB HLTH W200F Environmental Health Sciences Breadth Course 2 Units
Terms offered: Spring 2024, Fall 2023, Spring 2023
This survey course covers the breadth of hazards from chemical, biological, and physical agents of concern to environmental health professionals. Lectures are presented by experts on particular topics that emphasize the activities involved in professional practice.

Objectives & Outcomes
Course Objectives: Communicate environmental health issues to lay public and professionals, using appropriate terminology and data. Define and describe major ways in which the environment and human health are linked in different parts of the world and for different populations. Develop a case study on an environmental health and justice issue and propose solutions that integrate the main components of environmental health (exposure assessment, toxicology, epidemiology, and risk assessment).

Define and describe the key components of environmental health, including exposure assessment, toxicology, epidemiology, and risk assessment.

Describe ways by which the health impact from major environmental health risks, such as climate change, can be effectively controlled.

Learn effective ways to communicate important information in Environmental Health
Learn the concepts of environmental justice, water sanitation and hygiene (WASH), health risks associated with disasters, food systems, and public health.
Understand the associated health effects from developmental, adult and occupational chemical exposures.

Hours & Format
Fall and/or spring:
7 weeks - 4 hours of lecture per week
15 weeks - 2 hours of lecture per week
Online: This is an online course.

Environmental Health Sciences Breadth Course: Read Less [-]
PB HLTH W200G Health and Social Behavior Breadth 3 Units
Terms offered: Spring 2024, Fall 2023, Spring 2023
Course focuses on social, cultural, bio-behavioral determinants of health & health behavior, issues related to social & behavioral interventions, policies aimed at improving community & population health. Students will have experience in/be able to apply range of Health & Social Behavior perspectives, approaches to critically analyze public health issues, conceptualize research & interventions at different levels of ecological model. Topics designed to convey key concepts, highlight approaches in Health & Social Behavior via lectures, readings, videos & online resources. Group assignments focus on community context & health. Will require students to synthesize/apply concepts from course. Assignments will culminate in a final group project.

Health and Social Behavior Breadth: Read More [+]

Course Objectives: Describe a range of major themes, theories and conceptual frameworks, research and practice approaches commonly encountered in Health and Social Behavior.
Describe and apply ecological public health frameworks and concepts emphasizing multilevel interactions between biology, behavior, environments and the distribution of life opportunities.
Describe the rationale for community involvement in public health actions and the key principles of community-based approaches to public health. Understand how socially constructed concepts of race, ethnicity, immigration, gender and social class influence health and structure population health inequities.
Understand relationships between human behavior and public health to critically assess models of human behavior and to explore strengths-based, multi-level intervention design.

Rules & Requirements
Credit Restrictions: Students will receive no credit for PB HLTH W200G after completing PB HLTH 200L. A deficient grade in PB HLTH W200G may be removed by taking PB HLTH 200L.

Hours & Format

PB HLTH 201E Public Health Interventions: Theory, Practice, and Research 2 or 3 Units
Terms offered: Spring 2021, Spring 2020, Spring 2019
This course focuses on the primary factors that affect health and the interventions that can promote health. Students examine the determinants of health and the theory, history, types, ethics, and approaches of public health interventions. Community level interventions and multidisciplinary approaches receive special emphasis. The course stresses a rigorous critique of the outcomes of interventions and practical ways to improve them. Students take an active role in the design and conduct of the course.

**Public Health**

**PB HLTH 202G Advanced Alcohol Research Seminar 1 Unit**
Terms offered: Spring 2024, Fall 2023, Spring 2023
This course is an advanced alcohol research seminar in which presentations are made by alcohol research scientists nationally and internationally, as well as pre-and post-doctoral fellows, and focus on special topical areas related to psychosocial research in the field each semester. Areas covered include the epidemiology of drinking patterns and alcohol-related problems, issues related to treatment of alcohol-related problems, and health services research. Guest presentations are also provided (related to topics outside psychosocial research) to provide a breadth of understanding in the field. The seminar also includes sessions focused on methodological issues in alcohol-related research and grant writing, and has a research ethics component covering a number of sessions.

**Rules & Requirements**
Repeat rules: Course may be repeated for credit without restriction.

**Hours & Format**

PB HLTH 204F Culture, Public Health Practice, and Eliminating Health Disparities: From Ideas to Action in the 21st Century 3 Units
Terms offered: Spring 2016, Spring 2015, Spring 2013
Public health literature and practice make frequent reference to the terms culture, cultural competence, race, racism, ethnicity, and health disparities. Understanding these terms, their complex meanings and current application in public health practice is the subject matter of this course. By the end of the course students will be able to describe the concepts of culture, race, racism, ethnicity, cultural competence, cultural humility, health disparities and their use in public health theory and practice; identify and describe the application of these concepts in local public health practice; and demonstrate an understanding of these concepts and their application in public health practice through the completion of a group project.

PB HLTH W204 Public Health Communications 3 Units
Terms offered: Summer 2024 Second 6 Week Session, Summer 2023 Second 6 Week Session, Summer 2021 Second 6 Week Session
This introductory graduate course teaches human-centered design methodology and asks students to apply it to the creation of a public health communications tool. Students will select a public health challenge to focus on, then will learn how to conduct design research with the target community, seek communications design inspiration, and to build and test a prototype of a communications tool.

Public Health Communications: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor

Hours & Format
Fall and/or spring: 6 weeks - 6-6 hours of lecture per week
Summer: 6 weeks - 6-6 hours of lecture per week

Public Health Communications: Read Less [-]
PB HLTH 205 Program Planning and Needs Assessment 4 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course provides the necessary skills to plan effective public health programs. Examines principles and methods underlying program planning, emphasizing multi-disciplinary, collaborative and “real world” planning processes. Provides students with conceptual and experiential understanding of how to plan, conduct and present community health needs assessments by covering both theory and practical skills. Students will become familiar with the theory and methods related to ecologically valid assets-based and needs-based community health assessments and translate them into practice. Students will work with a community organization to apply the program planning principles and needs assessment taught throughout the course.

Objectives & Outcomes
Course Objectives: Students will work in a community organization to apply the knowledge and skills acquired in this class. Real world application of program planning principles and needs assessment will be taught throughout the course. Students will complete this course with the development of a complete program plan for a community organization or collect, analyze and present community health assessment data and develop feasible programmatic recommendations.

Rules & Requirements
Prerequisites: Public health students

PB HLTH W205 Program Planning and Development 3 Units
Terms offered: Summer 2024 Second 6 Week Session, Summer 2023 Second 6 Week Session, Summer 2022 Second 6 Week Session
The purpose of this course is to provide students with the necessary skills to plan health programs. We will examine the principles and methods underlying program planning. Multi-disciplinary, collaborative planning will be emphasized. Program planning applications will be emphasized throughout the course by using case studies, specific illustrations, and online planning exercises.

Objectives & Outcomes
Course Objectives: Students will work in a community organization to apply the knowledge and skills acquired in this class. Real world application of program planning principles and needs assessment will be taught throughout the course. Students will complete this course with the development of a complete program plan for a community organization or collect, analyze and present community health assessment data and develop feasible programmatic recommendations.

Rules & Requirements
Prerequisites: Master of Public Health students

PB HLTH 206 PH Nutrition Core Course: Critical Issues in Public Health Nutrition 2 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This course will introduce first-year public health nutrition and other MPH students to critical issues in public health nutrition, and provide them with critical thinking skills to analyze these issues using scientific literature. Students will build group facilitation skills, library research skills, and professional advocacy skills. Second-year public health nutrition students and a panel of PHN graduates will speak to the students about valuable skills and competencies needed for work in public health nutrition.

Objectives & Outcomes
Course Objectives: Students will work in a community organization to apply the knowledge and skills acquired in this class. Real world application of program planning principles and needs assessment will be taught throughout the course. Students will complete this course with the development of a complete program plan for a community organization or collect, analyze and present community health assessment data and develop feasible programmatic recommendations.

Rules & Requirements
Prerequisites: Master of Public Health students
PB HLTH 206B Food and Nutrition Policies and Programs 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course examines the historical origins of food and nutrition improvement programs in the United States, including the political and administrative conditions that led to the development of these programs. It also examines the goals, design, operations, and effectiveness of some of these programs: Food Stamp Program, the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC), the National School Lunch Program, the School Breakfast Program, Head Start, the Child Care Food Program, and the Elderly Nutrition Program.

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Summer: 3 weeks - 15 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Fernald

PB HLTH 206C Nutritional Epidemiology 3 Units
Terms offered: Fall 2023, Fall 2022, Spring 2022
This course develops the ability to read published nutritional epidemiology research critically. Basic research methods in nutritional epidemiology will be reviewed, and issues in design, analysis, and interpretation unique to nutritional epidemiology will be addressed. This will be accomplished by readings and study questions, lecture/discussions, and problem sets.

Objectives & Outcomes
Course Objectives:
# Critical analysis of issues in public health nutrition relating to the context of a developing country;
# Demonstration of effective organizational skills and the ability to communicate with and enlist the support of potential participants and stakeholders; and
# Participation in making policy related to health and nutrition within services, programs, and projects.
# Understanding of the biological and social roles of nutrition in health, particularly as they relate to issues of poor nutrition in a global context;

Student Learning Outcomes: 1.
Describe and interpret the prevalence and trends of public health nutrition issues faced by mothers and children living in low- and middle-income countries, ranging from malnutrition to micronutrient deficiencies to overweight and obesity.
2.
Discuss the political, environmental, cultural, and socioeconomic factors underlying a wide range of nutrition issues in low- and middle-income countries and predict how interventions affect these factors.
3.
Identify the ways in which historical, social, cultural, economic, commercial, and institutional factors promote or act as barriers to the design and implementation of agriculture, food, and nutrition policies and programs, and the ways in which these policies and programs affect health and other outcomes.
4.
Integrate knowledge of nutritional issues and policies to analyze methods through which stakeholder groups affect the design and implementation of food and nutrition programs and policies.

Hours & Format
Fall and/or spring: 15 weeks - 4 hours of lecture per week
Summer: 8 weeks - 15 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Block

PB HLTH 206D Programs and Policies in Global Nutrition 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course will use a case-based approach to examine the ways in which governments in developing countries design and implement policies and programs that affect food production and access to safe, affordable, and nutritionally adequate diets. In the course we will analyze, assess and evaluate ways to take action to ameliorate the major nutritional problems facing vulnerable populations in developing countries.

Objectives & Outcomes
Course Objectives:

Student Learning Outcomes:
1. Describe and interpret the prevalence and trends of public health nutrition issues faced by mothers and children living in low- and middle-income countries, ranging from malnutrition to micronutrient deficiencies to overweight and obesity.
2. Discuss the political, environmental, cultural, and socioeconomic factors underlying a wide range of nutrition issues in low- and middle-income countries and predict how interventions affect these factors.
3. Identify the ways in which historical, social, cultural, economic, commercial, and institutional factors promote or act as barriers to the design and implementation of agriculture, food, and nutrition policies and programs, and the ways in which these policies and programs affect health and other outcomes.
4. Integrate knowledge of nutritional issues and policies to analyze methods through which stakeholder groups affect the design and implementation of food and nutrition programs and policies.

PB HLTH W206A Nutrition Assessment 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
Nutrition assessment tools are used to evaluate an individual’s or population’s nutrition status and/or risk of specific nutrient excess or deficiency. This 3-unit course will discuss various dietary, anthropometric, clinical, and biochemical nutrition assessment tools and provide you with skills to determine which assessment tools are needed based on program/research project goals, how to interpret nutrition assessment survey results and apply them to populations, and critically evaluate the metrics used to define different types of malnutrition.

Nutrition Assessment: Read More [+]

Objectives & Outcomes

Course Objectives:
1. Recommend the appropriate nutrition assessment tool needed based on the target population, nutrient/ nutrition issue of interest, and goal of the assessment.
2. Critically evaluate nutrition assessment tools based on their required resources, applications, limitations, and biases.
3. Interpret nutrition assessment results and apply them at the population level.

Hours & Format

Fall and/or spring: 8 weeks - 6 hours of lecture per week

PB HLTH W206B Food and Nutrition Policy 3 Units
Terms offered: Fall 2023, Fall 2022
Course examines ways in which the US govt designs & implements policies/programs that affect access to nutritionally adequate, safe, affordable diets. We analyze how multiple stakeholders in the food system interact to affect policy design & implementation; historical, social, economic, environmental & political factors that determine stakeholder positions on policy issues; & ways these factors promote or act as barriers to achieving a system that promotes optimal food access, nutrition & health. We cover contemporary food & nutrition policy issues, as well as the history of these issues & ideas. Students will understand the broad spectrum of policies that affect human diets & will become familiar with the policy processes.

Food and Nutrition Policy: Read More [+]

Objectives & Outcomes

Course Objectives:

a. Describe the principal areas of domestic food and nutrition policy (e.g., food assistance, dietary guidance and education, agricultural support, food industry regulation, food safety regulation, food and nutrition research) and the most important current issues related to these policy areas.
b. Identify the governmental agencies primarily responsible for each area of food and nutrition policy and explain their roles.
c. Identify the ways in which historical, social, cultural, economic, commercial, and institutional factors promote or act as barriers to the design and implementation of agriculture, food, and nutrition policies and programs, and the ways in which these policies and programs affect health.
d. Describe the major federal food programs—their history, purpose, reach, and effectiveness, as well as current policy and political questions being raised about them.
e. Identify and apply the methods through which stakeholder groups affect the design and implementation of agriculture, food, and nutrition policies.
f. Recognize your potential to engage in and influence food and nutrition policy throughout your career.

Rules & Requirements

Credit Restrictions: Students will receive no credit for PB HLTH W206B after completing PB HLTH 206B. A deficient grade in PB HLTH W206B may be removed by taking PB HLTH 206B.

Repeat rules: Course may be repeated for credit with advisor consent.

PB HLTH 207 Transforming the Food System: From Agroecology to Population Health 3 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This course will take a solutions-oriented approach to addressing the pressing problems in current food systems. We will explore strategies used by the disciplines of agroecology, policy, law, public health, and business in working to improve food systems and apply their varied approaches to real-world case studies. Through weekly readings, discussions, and problem-solving sessions with Berkeley’s leading food systems experts, students will gain a broad understanding of food systems and the leverage points that can be targeted to improve the health of people and the planet.

Transforming the Food System: From Agroecology to Population Health:
Objectives & Outcomes
Course Objectives:
1. Define and explain food systems, explain interdependence within those systems, and understand their impacts on the health of people and the planet
2. Identify leverage points for transforming food systems based on evidence
3. Understand various strategies—legal, political, agro-ecological, economic, behavioral, etc.—that different disciplines use to target leverage points
4. Articulate different perspectives on food systems issues and explain the pros and cons of strategies for food systems change
5. Adapt communication styles to various audiences and media

Rules & Requirements
Prerequisites: Graduate student standing
Repeat rules: Course may be repeated for credit with advisor consent.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of seminar per week

PB HLTH W207A Maternal and Child Health Nutrition 3 Units
Terms offered: Fall 2023
Nutrition plays a vital role in human reproduction and child growth and development. This course covers core principles of nutrition and health and provides an overview of the major nutritional needs and issues faced by women of reproductive age, infants, children, and adolescents in the United States and globally, with selected topics explored in greater depth. This course will also explore disparities in various health outcomes related to MCH nutrition and provide students the opportunity to apply the course concepts at a personal and programmatic level.

PB HLTH 209A Introduction to Plant-Centric Food Systems 1 Unit
Terms offered: Spring 2023, Spring 2022
This is an energizing and exciting symposium that explores the robust opportunities and accompanying challenges of plant-forward solutions. The gathering is convened to underscore the urgency of shifting to plant-based diets for healthier, more equitable, and resilient food systems and to explore how students will play a pivotal role in the transformation of the food system. Plant Futures is the first program at UC Berkeley to feature in depth multidisciplinary conversation aimed at exploring the role and importance of plant-based foods as a critical lever for change, and provides a unique opportunity for students to directly connect to prominent leaders, creators and influencers and forge pathways for future professional engagement.

Introduction to Plant-Centric Food Systems: Read More [+]

Objectives & Outcomes

Course Objectives: 1.

Deepen students’ knowledge of the impacts of our diets and current food production systems on personal health and planetary boundaries that directly drive climate change by understanding the urgent challenges and most critical levers for transformation in food systems.

2. Build critical systems thinking competencies at the intersection of agriculture, nutrition, climate science, behavioral science, economics, entrepreneurship and ethics with plant-centric food systems.

3. Provide a multisectoral opportunity for students to build community and connect with leaders in different disciplines working in the plant-based sector through networking opportunities that converge the scientific, business, and academic communities.

4. Create an opportunity for students to engage and directly collaborate with food industry business leaders, experts, and researchers working on the forefront of innovation and sustainability, specifically in the plant-based sector.

5. Provide students with frameworks, examples and skill sets to design and implement innovative plant-centered food systems that are sustainable and driven by public health principles.

6. Equip students with the foundation and tools to become advocates and change makers for plant-centered food systems in their personal lives, on campus, and beyond. Ultimately, prepare students at a personal and professional level to accelerate the transition to a healthy, sustainable and just food system.

Hours & Format

Fall and/or spring: 1 weeks - 20 hours of seminar per week

PB HLTH 209B Plant Futures Challenge Lab 3 Units

Terms offered: Spring 2024, Fall 2023, Spring 2023

A collaborative, multidisciplinary applied learning journey in systems entrepreneurship, ethical leadership and innovation models intended to accelerate the transition to a healthy, sustainable and just food system.

Plant Futures Challenge Lab: Read More [+]

Objectives & Outcomes

Course Objectives:

1. Develop systems-thinking and analysis capabilities while developing ‘food-systems intelligence’ and ‘triple-bottom line’ business design capabilities. Understand the complex interdependencies and trade-offs involved in solving food systems challenges.

2. Develop an understanding of mission-driven organizational strategies and practices, based on clear ethical principles.

3. Combine and apply entrepreneurial skill sets, mind sets and tool sets needed for leadership, team building, and initiating and managing innovative change. Learn to transform an idea into a tangible, viable plan of action.

4. Learn to recognize and “size” unmet needs, issues, and opportunities in the food system and apply creativity, research, and discipline to create the type of solutions that make meaningful, lasting impacts.

5. Expand your personal capacities for collaboration while reaching out of your comfort zone by contacting and enrolling experts who can assist your project.

6. Lead and collaborate with other students from different disciplines across the University to apply the team building strategies and leadership necessary to develop a plant-forward solution to solve complex food systems challenges.

7. Grow and cultivate your professional network and experience by building deep relationships with mentors and professional allies.

8. Develop, through practice, the foundation and tools needed to become advocates for plant-forward solutions in your personal lives, at Berkeley, and beyond!

PB HLTH W209 Comparative Health Systems 3 Units

Terms offered: Spring 2024, Spring 2023, Spring 2021

In the past decade, health systems and their role in global health have received increasing focus. While disease-focused, ‘vertical programs’, such as malaria and HIV/AIDS still command the lion’s share of donor resources, it has become clear that the sustainability of disease programs depends on embedding them into a country’s health system. This course provides a real world, practical understanding of health systems, based on a solid academic foundation. It introduces current debates about health systems, health financing, and universal health coverage in the international community. Students will use five key structural questions to analyze health care systems and their performance on quality, cost and access metrics.

PB HLTH 210B Adolescent Health 3 Units
Terms offered: Spring 2023, Spring 2022, Fall 2021
This course is designed to provide an understanding of the epidemiology and etiology of critical health issues among adolescents, including complex contextual influences and individual processes related to this dynamic period of life. Each adolescent health outcome will be considered in light of developmental issues related to the pubertal transition and multilevel influences that contribute to adolescent health and well-being, including 1) biological, 2) cognitive, 3) behavioral, and 4) social-culture factors. The course will emphasize empirical evidence for the etiology of adolescent health problems, documented risk and protective factors, and content and timing of preventive intervention efforts to ameliorate risk.

**PB HLTH W213 Global Health Ethics 3 Units**

Terms offered: Fall 2023, Fall 2022, Fall 2021

This course provides an overview to ethical issues within a global health context. The course starts with an introduction to ethical frameworks, theories, and historical references that elevate the ethics conversation to the global stage. The course will then link theory to practice as we delve deeper into ethical issues in research, experiential learning, and delivery. We will consider ethical questions about the discipline of global public health and the roles of governments, academic institutions, organizations, health professions, and members of the public as stewards of health. Students will gain a deeper understanding of the diverse international perspectives on the concepts of ethics and health.

**PB HLTH 214 Eat.Think.Design 3 Units**

This course is a team-oriented, project-based course designed around the case-based and learning-by-doing models. The critical elements of the human-centered design process – discovering, ideating, and prototyping – are learned through didactic sessions and an 8-week project students work on in teams. Working with community partners on a public health issue related to food, the student teams apply human-centered design skills to the problem, and design and pilot (when possible) a solution with and for their community partner.

PB HLTH 216A Biological Embedding of Social Factors 2 Units
Terms offered: Fall 2019, Fall 2017, Spring 2016
This is an interdisciplinary course which will adopt a broad-based ecological perspective of health and behavior. This class will emphasize the interconnected and multidirectional relationships between biology, behavior, and the social environment. This course will be conducted as a seminar series (with a focus on biological processes). We will investigate the assertion that biological, psychological, and social processes interact over a lifetime to influence health and vulnerability to disease (a developmental epigenetic perspective). Rather than focusing on "if" social factors can influence health and disease we will focus on "how" social factors may regulate/change biological measures. Three very general themes will be addressed: development, "social" neuroscience and gene-environment interactions as they relate to behavior. Topics such as constraints/plasticity and behavior, genetic determinism, vulnerability versus resilience, gene-environment interactions, fetal/developmental programming, and stress will all be touched upon.

PB HLTH 217C Aging and Public Health 3 Units
Terms offered: Spring 2017, Spring 2016, Spring 2015
The purpose of this course is to provide an overview of research, practice, and policy in the area of aging and public health. Topics will include the epidemiology of aging; race, class, gender, and aging; nutrition and the elderly; and current health policy surrounding aging. Themes running throughout the course and linking a number of the topics covered will include the diversity of the elderly; the importance of co-morbidity and functional health status in this population group; the family and broader environmental contexts in which aging takes place; and the influence of public and private sector policies on health and health-related behavior in the elderly. Weekly lectures by the faculty will be complemented by presentations by prominent Bay Area researchers in the areas of geriatrics and gerontology. This is the core course for the School of Public Health specialty in aging and public health.

PB HLTH C217D Biological and Public Health Aspects of Alzheimer's Disease 3 Units
Terms offered: Spring 2017, Spring 2015, Spring 2014, Spring 2013
This course will survey the field of Alzheimer's disease (AD) from a biological and public health perspective by reading original research papers in the fields of medicine, neuroscience, and epidemiology. The course will begin with a historical survey of the concept of AD, followed by a description of clinical and neuropathological features. Subsequent classes will cover the genetics and molecular biology of the disease, as well as biomarkers, epidemiology, risk factors, treatment, development of new diagnostic approaches, and ethical issues. The course will also serve as a model for the analysis of complex diseases with multiple genetic and environmental causes, and late onset neurodegenerative diseases. The course will also serve as a model for the analysis of complex diseases with multiple genetic and environmental causes and late-onset neurodegenerative disease. PB HLTH 219E Introduction to Qualitative Methods in Public Health Research 3 Units

Terms offered: Spring 2024, Spring 2023, Spring 2022

This course is designed to familiarize students who have little or no experience in conducting qualitative research with the perspectives, methods, and techniques of a vast and contentious tradition of research. The course will cover some of the methods of data collections used in the conduct of qualitative inquiries, the analysis of textural data, the write-up of findings from qualitative studies, and the development of a qualitative research proposal. While learning about qualitative methods, students will gain an understanding of the qualitative research literature on a topic of their choice, as well as how to integrate findings from a variety of qualitative studies on a research question of topic.

PB HLTH W219 Social and Behavioral Health Research: Introduction to Survey Methods 3 Units

Terms offered: Summer 2024 Second 6 Week Session, Spring 2024, Summer 2023 Second 6 Week Session

This course provides a thorough background in the design, administration, and interpretation of a range of survey strategies (e.g., telephone, face-to-face, mail and internet surveys) within the broader context of a research or evaluation project. Topics will include formulation of study aims, developing an appropriate research design, protection of human subjects and proper conduct of research, sample size calculations, recruitment strategies, survey administration, and development of an analysis plan. Class topics are designed to convey practical knowledge through topical lectures, group activities, partner feedback and a survey design project consisting of two parts: a survey instrument and a research plan.

Social and Behavioral Health Research: Introduction to Survey Methods: Read More [+]

Objectives & Outcomes

Student Learning Outcomes:
1. Formulate research questions and develop testable hypotheses appropriate for survey research
2. Identify appropriate survey tools to address a particular research question and hypothesis
3. Define and operationalize constructs and variables for survey research
4. Assess the reliability and validity of survey measures
5. Select a sampling design optimized for examining a particular research question and hypothesis
6. Demonstrate the ability to identify and address cultural and ethical considerations in conducting survey research, particularly involving diverse and special populations (including children, the elderly, and those diagnosed and treated for acute and chronic conditions) where relevant
7. Develop an analysis plan and dissemination plan linked to research questions, hypotheses and a survey instrument

Hours & Format

PB HLTH 220C Health Risk Assessment 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course introduces the basic scientific principles of environmental health risk assessment, develops the understanding necessary to carry out and interpret quantitative risk assessments, and describes the context in which decisions manage environmental health risks are made. The course presents the quantitative methods used to assess the human health risks associated with exposure to microbial and chemical agents, focusing on the four major components of risk assessment: hazard identification, dose-response assessment, exposure assessment and risk characterization. The course examines the application of environmental health risk assessment to contemporary issues including the associated complexities, challenges and controversies.

Global Health Policy: Read Less [-]
PB HLTH W220M Health Policy Methods 3 Units  
Terms offered: Summer 2024 Second 6 Week Session, Fall 2023, Summer 2023 Second 6 Week Session  
This course serves as an introduction to key topics in health policy making in the United States, with a focus on the policy process and policy analysis methods. Using the policy analysis framework of Eugene Bardach’s Eightfold Path first introduced in PBHLTH W200E, the course will explore the entire policy analysis process from the identification of a problem, to the evaluation of policy solutions, and finally to the techniques and formats for effective health policy communications. This analysis method is contextualized within the process of public policy making within the U.S. government.  
Health Policy Methods: Read More [+]

Objectives & Outcomes

Course Objectives:
- Apply learned policy analysis skills to proposed and existing public health policies.
- Build critical policy analysis skills to identify and evaluate the methods used for developing policy alternatives and understand the impact of existing public health policies.
- Critique the role of research and evidence in public health policy formation and evaluation.
- Describe our country’s institutional players (i.e., legislative, administrative, judicial), their roles in policy making and how to influence policy outcomes.
- Leverage critical analysis tools of language and framing to develop and advocate health policies in verbal and written communication deliverables.

Student Learning Outcomes:
- Conduct policy advocacy: understand the gaps in community needs and articulate these needs in the policy setting. Develop innovative strategies for influencing health policy for diverse groups.
- Conduct policy analysis: evaluate and analyze policy solutions that are culturally competent. Communicate evidence and recommendations succinctly and persuasively.
- Deepen understanding of the dimensions of the policy-making process, including the roles of ethics and evidence.
- Examine current public health issues and their impacts on public health and health equity.
- Learn about the health policy context and the institutions, stakeholders, advocacy groups and processes that shape policy outcomes.
- Recognize the disparate impacts of policies on communities with intersectional identities.

Rules & Requirements

Prerequisites: PB HLTH W200E

Credit Restrictions: Students will receive no credit for PB HLTH W220M after completing PB HLTH 220. A deficient grade in PB HLTH W220M may be removed by taking PB HLTH 220.

Hours & Format

Fall and/or spring:
- 8 weeks - 6 hours of lecture per week
- 7 weeks - 6.5 hours of lecture per week
- Summer:
  - 8 weeks - 6 hours of lecture per week
  - 7 weeks - 6.5 hours of lecture per week

PB HLTH 221 Mental Health Policies, Programs, and Services 2 Units  
Terms offered: Spring 2017, Spring 2015, Spring 2013  
This course provides a foundation for understanding mental illness and mental health services and the evolution and current state of our thinking about them. It presents the most frequent varieties of mental illness and addresses their frequency of occurrence, and it addresses the social disability from mental illness and the societal response to mental illness. It also considers treatments, services, effectiveness, quality of care, and financing, as well as considering financing, legal issues, and special concerns and services for children and youth. In addition, the course provides a forum to critically examine the knowledge base on mental illness, epidemiology, policies, programs, and services as it presents major controversies and highlights the best available evidence.

PB HLTH 221B Understanding and Overcoming Health Care Disparities 2 Units  
Terms offered: Spring 2018, Spring 2016, Fall 2013  
In this class, we will construct a framework to formulate explanations for health care disparities and to construct responses that have the potential for a policy-oriented, and therefore widespread, response. Taking advantage of selected developments in social science theory and research that can provide insight into how health care disparities come about, we will draw from anthropological and psychological theories of cultural orientation, cultural framing of problems, and cultural identity; as well as drawing from psychological theories of stress and coping. We also will draw from sociological theories of individual and community poverty, and theories characterizing health care system design and service delivery.

Understanding and Overcoming Health Care Disparities: Read Less [-]
PB HLTH 222A Biomedical Innovation Policy
3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
Course examines the policy framework for biomedical technology, including medical devices, drugs, diagnostics, digital therapeutics and algorithms. Emphasis will be placed on the funding of research and development, the protection of intellectual property, FDA market authorization, insurance coverage and algorithm design. Focus will be on the US but will examine industrial policy and innovation nationalism within a global context. Students are required to read peer-reviewed articles, keep up with journalistic reports and participate in classroom discussions. Lectures will be pre-recorded and posted on bCourses and it is expected that students will have watched these lectures and done the readings prior to class.

Biomedical Innovation Policy: Read More [+]

Objectives & Outcomes

Course Objectives:
- Compare the strengths and limits of alternative mechanisms for stimulating R&D investments in the life sciences: research grants, commercialization grants, tax credits, patent-protected pricing, innovation prizes, and advanced market commitments, among others.
- Describe the basic principles and applications of intellectual property policy and the tradeoffs between greater access to current treatments, via low product prices, and greater incentives for investment in new treatments, via high prices.
- Intellectual property policy with respect to generics and biosimilars
- Discuss the basic structure of regulatory market authorization:
  - FDA review of safety and efficacy for pharmaceuticals
  - Accelerated review and the evolution of evidentiary demands
  - Market authorization for medical devices, diagnostic tests, digital therapeutics
- Explain the basic principles of health technology assessment and their applicability to insurance coverage and pricing.

Rules & Requirements

Prerequisites: Graduate standing. Undergraduates will be considered on case-by-case basis

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

PB HLTH 223C Strategic Management and the Health Sector 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
The overall purpose of this course is to assist the student in managing health care organizations from a strategic perspective. This is accomplished by systematically addressing systemwide, organization-wide, group- and individual-level issues in strategy formulation, content, implementation, and performance. Emphasis is placed upon the manager's role in simultaneously taking into account a wide variety of internal and external factors to improve organization and system performance in meeting the health needs of individuals and communities. Emphasis is also placed on the development and implementation of strategies to meet multiple stakeholder demands, particular attention given to continuous quality improvement/total quality management.

Rules & Requirements
Prerequisites: Business Administration 205 or 224A and 223A or consent of instructor. Students are required to have a general background knowledge of the health services system.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

PB HLTH 223E Capstone Seminar in Health Policy and Management 2 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course is an integrative seminar that builds on the core curriculum requirements of the school and HPM specialty. Participants are master's degree students advancing to candidacy. After sharing their internship experiences and the impact on career decisions, the students are required to draw on situations from their internship to demonstrate what they have learned by leading fellow seminar participants in facilitated discussions, culminating in a specific management recommendation or policy position. Students will gain exposure to a range of HPM issues based on the experiences of their peers. Each student is also required to produce a 20-page paper and prepare and deliver a formal presentation to seminar participants and invited faculty. The paper will address an HPM topic of interest that has been selected by the student and approved by the course faculty and the student's academic advisor. Suggested formats for the paper are a policy or strategic management analysis, but other options may be proposed and approved by the instructor.

Rules & Requirements
Prerequisites: Graduate standing in HPM and completion of 297 internship.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of seminar per week

PB HLTH W223 Strategy in Health Care Organizations 3 Units
Terms offered: Summer 2024 Second 6 Week Session, Summer 2023 Second 6 Week Session, Summer 2022 Second 6 Week Session
This course is an introduction to health care strategy in which students will have an immersive, practical, hands-on experience in the strategic management of a real or fictitious health care organization. This course will familiarize students with the requisite skills and techniques to lead strategic change at a division, department, or enterprise level within a health care organization.

Strategy in Health Care Organizations: Read More [+]

Objectives & Outcomes

Course Objectives: 1. Strategic Management Theory and Leading Practices. Students will learn this through a combination of lectures, readings from the textbook and business journal articles, and "how to" instructional videos.

2. Real World Experience. Students will learn this through a combination of Executive Interviews, Case Studies, and personal reflection.

3. Hands-on Practice. Students will learn this through a carefully designed, team-based practical experience in which they for a real or fictitious health care organization of their choice.

Student Learning Outcomes: Adjust organizational strategy in response to real-time crises.
Define and align their organization’s mission, vision, values, and strategy.
Learn how to define and measure key performance indicators (KPIs).
Learn how to successfully implement a strategy by creating a Strategic Roadmap, high level Project Plan, and Risk Mitigation Plan.
Learn various common strategies, including: Growth by Concentration/Horizontal Integration, Growth by Related Diversification/Vertical Integration, and Innovation.
Learn various tools and techniques that may be used in informing a strategy including: Value Chain Analysis, Benchmarking, SWOT Analyses, Root Cause Analysis, Porter’s Five Forces Model, Scenario Planning, and Balanced Scorecards.
Understand the important influences of leadership and culture on the successful execution of the strategy.
Understand the pros and cons of strategic alternatives including: Internal Development, Internal New Venture Creation, Investment in New Ventures, Acquisition, Mergers, Joint Ventures/Strategic Alliances/Partnerships, and Innovation.

Hours & Format

PB HLTH 226D Global Health Economics 3 Units
Terms offered: Spring 2019, Fall 2017, Fall 2015
This class is a survey of different health care systems in western and eastern Europe, the former Soviet Union, Canada, Japan, Taiwan, and China. Other countries will be added to meet the interests of students. The course examines the structure and financing of the health system in each country and assesses the effectiveness, efficacy, and equity of each systems. Students will make a presentation on a country's health system and write a paper.

PB HLTH W226A Health Economics 3 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This online course provides an overview of the United States healthcare system using a microeconomic lens. Students will be introduced to the microeconomic theory and empirical students that will deepen their understanding of how consumers, firms and the government influence healthcare expenditures (including its quantity and prices), healthcare quality, and patient health outcomes. These economic models will enable students to predict how changes in consumer behavior, the industrial organization of firms, and government policies affect healthcare and health outcomes.

**PB HLTH W226F Cost-Effectiveness Analysis 1 Unit**

Terms offered: Spring 2024, Spring 2023, Spring 2022

This course teaches students cost-effectiveness analysis and related tools in a compact 3-week online format. Students will learn when and why to use alternative economic evaluation methods to assess benefits relative to costs of health policies and interventions. They will also learn to interpret and critique such analyses, and to conduct basic cost-effectiveness analyses themselves.

Cost-Effectiveness Analysis: Read More [+]

**PB HLTH 231A Analytic Methods for Health Policy and Management 3 Units**

Terms offered: Spring 2024, Spring 2022, Spring 2020

This course provides an overview of analytic methods that Master's students in health policy and management should be familiar with. Topics include linear regression, limited dependent variable models such as logit, design, and analysis of complex surveys (with weighted and clustered sampling), and quasi-experimental causal analysis. The course complements 245, with an emphasis on enabling nonstatisticians to interpret and critique applications in the HPM literature.

Analytic Methods for Health Policy and Management: Read More [+]

**Rules & Requirements**

Prerequisites: 142 or equivalent (basic probability and statistics)

PB HLTH 235 Impact Evaluation for Health Professionals 3 Units
Terms offered: Fall 2016, Fall 2015, Fall 2014
This course will review the methods for the design and analysis of impact evaluations relevant to health professionals, especially those working in low and middle-income countries. The class will emphasize the challenges involved in identifying the causal relationship between a program or project and its outcomes while providing students with some experience in drafting a proposal that might be submitted to a funding agency for support of an impact evaluation. For doctoral students the course may help concretely to identify potential dissertation projects; for masters students the course will provide skills useful in obtaining a future job in the field.
Impact Evaluation for Health Professionals: Read More [+]

PB HLTH 237A Theories and Methods in Health Policy and Health Services Research 2 or 4 Units
Terms offered: Fall 2020, Fall 2018
The first half of the course focuses on the application of organization theories to health sector organizations. The second half of the course focuses on the application of public administration and political science theories to health sector organizations. Students will also be exposed to basic research designs, logic models and hypothesis development. Emphasis is placed on critique of existing theories and the associated empirical literature. This PhD seminar course is primarily intended for first year PhD students in the Berkeley PhD program in Health Policy administered by the School of Public Health on behalf of the Graduate School. The course is also open with the consent of the instructors to students in other PhD programs.

PB HLTH 237D Health Policy PhD Dissertation Seminar 2 Units
Terms offered: Spring 2024, Fall 2023, Spring 2023
This PhD dissertation seminar is restricted to advanced students (Year 3+) of the PhD Program in Health Policy. Draw together skills developed in coursework in the preparation and conduct of one's own dissertation project. For students already advanced to candidacy, this will entail presenting research findings. For students not yet advanced, this will involve developing the dissertation prospectus. Students learn to incorporate colleague feedback to improve research projects. Practices associated with human subjects and ethics of research are also emphasized.

Health Policy PhD Dissertation Seminar: Read More [+]

PB HLTH 237E Doctoral Seminar in Health Organizations & Management 2 Units
Terms offered: Fall 2023, Fall 2021
The seminar is required for all first and second-year students in the PhD Program in Health Policy. This seminar focuses on organizational behavior and management research in health. The seminar covers major organizational and management theories and frameworks relevant to the study of health policy and health sector organizations.

Doctoral Seminar in Health Organizations & Management: Read More [+]

Objectives & Outcomes
Course Objectives:

a) Apply conceptual frameworks derived from organization/management theories to health policy and health services research.
b) Critique health policy and health services research studies that explore questions related to organization/management of health care.
c) Pose relevant and important health policy research questions, and devise strategies for testing these questions empirically.

Rules & Requirements
Prerequisites: Doctoral student status or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of seminar per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Brewster, Rodriguez

Doctoral Seminar in Health Organizations & Management: Read Less [-]
PB HLTH 237F Doctoral Seminar in Health Economics 2 Units
Terms offered: Fall 2022
The seminar is required for all first and second-year students in the PhD Program in Health Policy. This seminar focuses on health economics. Students critically examine empirical research focused on moral hazard, adverse selection, modeling demand, cost-effectiveness analysis, market influences, provider payment, behavioral economics, and benefits design in health care and public health.

Doctoral Seminar in Health Economics: Read More [+]

Objectives & Outcomes

Course Objectives:

a) To provide an initial exposure to the major economic theories and frameworks relevant to the study of health policy and health services research.
b) To introduce key empirical methodologies used by economists.
c) To critique empirical studies conducted from the methodological perspectives typically applied by economists.
d) To provide overall socialization to the norms and values of the component disciplines as well as the health policy and health services research field as a whole.

Rules & Requirements

Prerequisites: Doctoral student status or consent of instructor

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of seminar per week

PB HLTH C240A Introduction to Modern Biostatistical Theory and Practice 4 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
Course covers major topics in general statistical theory, with a focus on statistical methods in epidemiology. The course provides a broad theoretical framework for understanding the properties of commonly-used and more advanced methods. Emphasis is on estimation in nonparametric models in the context of contingency tables, regression (e.g., linear, logistic), density estimation and more. Topics include maximum likelihood and loss-based estimation, asymptotic linearity/normality, the delta method, bootstrapping, machine learning, targeted maximum likelihood estimation. Comprehension of broad concepts is the main goal, but practical implementation in R is also emphasized. Basic knowledge of probability/statistics and calculus are assumed.

Introduction to Modern Biostatistical Theory and Practice: Read More [+]

Rules & Requirements

Prerequisites: Statistics 200A (may be taken concurrently)

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week

PB HLTH C240B Biostatistical Methods: Survival Analysis and Causality 4 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021, Fall 2020
Analysis of survival time data using parametric and non-parametric models, hypothesis testing, and methods for analyzing censored (partially observed) data with covariates. Topics include marginal estimation of a survival function, estimation of a generalized multivariate linear regression model (allowing missing covariates and/or outcomes), estimation of a multiplicative intensity model (such as Cox proportional hazards model) and estimation of causal parameters assuming marginal structural models. General theory for developing locally efficient estimators of the parameters of interest in censored data models. Computing techniques, numerical methods, simulation and general implementation of biostatistical analysis techniques with emphasis on data applications.

Rules & Requirements
Prerequisites: Statistics 200B (may be taken concurrently)

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week

PB HLTH 241 Intermediate Biostatistics for Public Health 4 Units
Terms offered: Spring 2024, Fall 2023, Spring 2023
In this course, students will study biostatistical concepts and modeling relevant to the design and analysis of multifactor population-based cohort and case-control studies, including matching. Key topics include: measures of association, causal inference, confounding interaction, with modeling focusing on logistic regression.
Intermediate Biostatistics for Public Health: Read More [+]

Objectives & Outcomes

Course Objectives: 1.
- Draw directed acyclic graphs to show the causal relationships between covariates, intervention and outcome; and define the counterfactual outcomes of interest.

2. Fit a logistic regression model or conduct a statistical test of independence, trend, goodness-of-fit, or homogeneity to assess statistical significance from a dataset, single 2x2 table, series of 2x2 tables, or stratified 2x2 tables.

3. Fit a linear regression model with multiple exposure measures. Apply transformation to fit non-linear outcomes. Estimate and interpret model coefficients and obtain inference for them.

4. Conduct and interpret analysis of variance and co-variance.

5. Estimate, obtain inference for, and interpret the following parameters: relative risk, attributable risk, excess risk, odds ratio (pooled, adjusted, log, stratum-specific).

6. Calculate and interpret linear and logistic regression model coefficients in the presence of confounding and interaction, and for matched studies.

7. Use tools in the R programming language to fit linear and logistic regression models; test null hypotheses; and summarize, transform and visualize data.

8. Be aware of other modeling strategies not covered in depth in this course, including the Cox proportional hazards model, generalized linear models and machine learning techniques.

Rules & Requirements

Prerequisites: PB HLTH 142, PB HLTH W142 or equivalent introductory course in statistics with consent of instructor

Credit Restrictions: Students will receive no credit for PB HLTH 241 after completing PB HLTH W241R. A deficient grade in PB HLTH 241 may be removed by taking PB HLTH W241R.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 2 hours of laboratory per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Kang-Dufour

PB HLTH W241 Intermediate Biostatistics for Public Health 4 Units

PB HLTH C242C Longitudinal Data Analysis 4 Units

Terms offered: Fall 2023, Fall 2021, Fall 2019
Course covers statistical issues surrounding estimation of effects using data on units followed through time. Course emphasizes a regression model approach for estimating associations of disease incidence modeling, continuous outcome data/linear models & longitudinal extensions to nonlinear models forms (e.g., logistic). Course emphasizes complexities that repeated measures has on the estimation process & opportunities it provides if data is modeled appropriately. Most time is spent on 2 approaches: mixed models based upon explicit (latent variable) maximum likelihood estimation of the sources of the dependence, versus empirical estimating equation approaches (generalized estimating equations). Primary focus is from the analysis side.

Longitudinal Data Analysis: Read More [+]

Objectives & Outcomes

Course Objectives: After successfully completing the course, you will be able to:

• frame data science questions relevant to longitudinal studies as the estimation of statistical parameters generated from regression,

• derive consistent statistical inference in the presence of correlated, repeated measures data using likelihood-based mixed models and estimating equation approaches (generalized estimating equations; GEE),

• implement the relevant methods using R.

• interpret the regression output, including both coefficients and variance components and

Rules & Requirements

Prerequisites: 142, 145, 241 or equivalent courses in basic statistics, linear and logistic regression

Hours & Format

PB HLTH 243A Targeted Learning 4 Units

Terms offered: Fall 2023, Fall 2022, Fall 2021
PH 243A teaches students to construct efficient estimators & obtain robust inference for parameters that utilize data-adaptive estimation strategies (i.e., machine learning). Students perform hands-on implementation of novel estimators using high-dimensional data structures, providing students with a toolbox for analyzing complex longitudinal, observational & randomized control trial data. Students learn & apply the core principles of the Targeted Learning methodology, which generalizes machine learning to any estimand of interest; obtains an optimal estimator of the given estimand, grounded in theory; integrates state-of-the-art ensemble machine learning techniques; & provides formal statistical inference in confidence intervals & testing.

Targeted Learning: Read More [+]

Objectives & Outcomes

Course Objectives: Design an ensemble of machine learning algorithms, Super Learner, such that the optimality theory (i.e., oracle inequalities for the general cross-validation selector) is likely to hold for the data at-hand.

Explain the importance of asymptotic linearity and efficiency/inference to non-statistician collaborators, and reason whether or not the current estimator meets these conditions.

Query subject-matter experts, study designers, and others involved in the data generation process in order to
# use the data at-hand to formulate a statistical estimation problem that’s realistic, reliable, and reproducible;
# check assumptions that are required to use this data to answer causal questions (i.e., identifiability);
# build a library of machine learning algorithms that is consistent with the process that generated the data;
# design improved (potentially hypothetical) studies that would permit answering the relevant scientific question of interest, and evaluate if this ideal experiment is possible/ethical in the real-world; and
# translate the final scientific question of interest into a statistical question whose answer can be reliably estimated from the data.

Use R’s tibble software ecosystem to
# define a machine learning task that mirrors your estimation problem;
# specify the question of interest in terms of a tlverse Spec; and
# design simulations that can be used to evaluate the behavior of estimators and their inference, ultimately informing your final choice for estimation.

Rules & Requirements

Prerequisites: STAT 201A-B or instructor’s consent. PBHLTH C240A / STAT C245A, PBHLTH 252D or STAT C239A recommended

Repeat rules: Course may be repeated for credit with advisor consent.

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of laboratory per week

Additional Details

Subject/Course Level: Public Health/Graduate

Grading: Letter grade.

Instructor: van der Laan

Targeted Learning: Read Less [-]
PB HLTH 243B Targeted Learning in Practice
2 - 3 Units

Terms offered: Spring 2023, Spring 2022, Spring 2004

This course follows PBHLTH 243A as a two part series. It provides a self-contained introduction to the computational tools for Targeted Learning through its accompanying software ecosystem, the tlverse. Each class incorporates a concise preliminary lecture, vignette-guided live coding exercises, and discussion. Students will have the opportunity to perform hands-on implementation of novel estimators for answering causal questions with real-world cross-sectional data using the tlverse software ecosystem of R packages.

Targeted Learning in Practice: Read More [+]

Objectives & Outcomes

Course Objectives: Apply standard cross-validation schemes using the origami R package, including V-fold, stratified, ad cluster-specific cross-validation.
Approximate causal effects under stochastic treatment regimes with the tmle3shift R package by defining a single shift, grid of counterfactual shifts, or individual-level shifts of the treatment.
Differentiate stochastic, dynamic, optimal dynamic, and static treatment regimes from each other, and interpret effects under each kind of intervention.
Estimate direct and indirect effects based on decompositions of the total causal effects of static and stochastic interventions with the tmle3mediate R package.
Estimate the effect of a static intervention using the appropriate "Spec", as defined in the tmle3 R package, and apply tmle3's delta method in order to estimate transformations of existing parameters.

Follow the roadmap of statistical learning to define estimation problems in realistic statistical models, and obtain valid inferences.
Obtain and interpret variable importance metrics from the following tlverse R packages: sl3, tmle3, tmle3mopttx, tmle3shift, and tmle3mediate.

Train a super learner using the sl3 R package by selecting an appropriate loss function, metalearner, and assembling a library of candidate machine learning algorithms.

Use the tmle3mopttx R package to learn the optimal individualized treatment regime, and to estimate effects under such data-adaptive regimes.

Rules & Requirements

Prerequisites: PB HLTH 243A
Repeat rules: Course may be repeated for credit with advisor consent.

Hours & Format

Fall and/or spring: 15 weeks - 1-1 hours of lecture and 1-1 hours of laboratory per week

Additional Details

Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: van der Laan

Targeted Learning in Practice: Read Less [-]

PB HLTH 243C Information Systems in Public Health 2 Units

Terms offered: Spring 2024, Spring 2023, Spring 2022

An introduction to new information systems, such as the Internet and interactive television, and how they may be used to improve human health. The course has three objectives: first, to familiarize students with new information technologies; second, to review how these technologies will be used by public health professionals, consumers, health care providers, and others; and third, to study related ethical and legal issues such as privacy, access, and liability. The course is designed for people with minimal understanding of interactive technologies.

PB HLTH 243D Special Topics in Biostatistics: Adaptive Designs 3 Units

Terms offered: Fall 2018, Fall 2015, Fall 2014

This course examines the theory and statistical methods for analyzing data generated by adaptive group sequential designs. It also considers the construction of targeted adaptive group sequential designs that adapt in a way that is optimal for the estimation of a particular target feature of the data generating experiment (i.e., causal effect of the treatment). Topics to be covered include: sequential testing, adaptive sample size, martingale estimating functions to construct estimators, targeted maximum likelihood estimation for adaptive designs, targeted Bayesian learning for adaptive designs, martingale theory for the analysis of estimators for adaptive designs.

Special Topics in Biostatistics: Adaptive Designs: Read More [+]

Rules & Requirements

Prerequisites: Prior biostatistics or statistics course or consent of instructor

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

PB HLTH 244 Big Data: A Public Health Perspective 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
Big Data deluge now engulfs almost every brand of science and business, requiring expertise in combination of statistics and computing. This course aims to help students develop a set of useful skills to cope with the Big Data challenges, with particular focus on Public Health applications. It covers a wide range of modern statistics and machine learning techniques, as well as state of the art computational tools, and emphasizes statistical modeling and inference (e.g., how to properly formulate a hypothesis and a model, develop intuitive insights and interpretations, and evaluate uncertainty of the outcomes) and covers important computational and algorithmic components (modern computational paradigm of Map-Reduce).
Big Data: A Public Health Perspective: Read More [+]

Rules & Requirements
Prerequisites: PB HLTH 142 (basic concepts of probability and distributions, point and interval estimation, hypothesis testing), PBHLTH 145 (regression analysis of continuous outcome), PBHLTH 241 (categorical data analysis, some modern statistical learning techniques), or equivalent or permission of the instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of laboratory per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Li

PB HLTH 245 Introduction to Multivariate Statistics 4 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
The following topics are discussed in the context of biomedical and biological application: multiple regression, loglinear models, discriminant analysis, principal components. Instruction in statistical computing is given in the laboratory session.
Introduction to Multivariate Statistics: Read More [+]

Rules & Requirements
Prerequisites: 145 or equivalent or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week

Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Lahiff

PB HLTH 249 Grant Writing 3 Units
Terms offered: Fall 2023, Fall 2022, Spring 2004
The objective of this course is to introduce students to the fundamentals of proposal writing for epidemiologic research. The course will focus primarily on developing an NIH Research Grant (R Series), though we will also discuss other grant mechanisms. In addition, the course will cover the grant submission process and grand review. Students will write a formal proposal focusing on a specific research question of their choice. Emphasis will be placed on development of significant and innovative research aims, critical evaluation of the previous literature and proposing a valid and feasible approach to address their research question.
Grant Writing: Read More [+]

Objectives & Outcomes
Course Objectives:
- Demonstrate critical thinking and communication skills
- Describe principles of grant writing
- Design an epidemiologic study
- Explain about the grant submission and review process

Rules & Requirements
Prerequisites: PBHLTH 250A, PBHLTH 250B & PBHLTH 293: Epidemiology Doctoral Seminar is recommended. Developing a research topic, writing a 1st draft of your Specific Aims takes time. Accomplishing these tasks, writing a full grant proposal is a tall order for a semester. Recommend that prior to taking this class you take PH 293: Epidemiology Doctoral Seminar, which focuses on developing a research topic & Specific Aims. PH 249 picks up where PH 293 leaves off & requires a strong first draft of your Aims page
Credit Restrictions: Students will receive no credit for PB HLTH 249 after completing PB HLTH 249 or PB HLTH 249. A deficient grade in PB HLTH 249 may be removed by taking PB HLTH 249, or PB HLTH 249.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Metayer

Grant Writing: Read Less [-]
PB HLTH 250A Epidemiologic Methods I 3 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This course is designed to introduce principles and methods of epidemiology, including types and sources of descriptive epidemiologic data, analytic study designs (intervention trials, cohort, case-control, cross-sectional and ecological), screening, confounding and other types of bias, and causal inference. The course will provide a basic understanding of epidemiology for those pursuing a career in public health.

PB HLTH 250B Epidemiologic Methods II 4 Units
Terms offered: Spring 2024, Fall 2023, Spring 2023
This course is intended as an intermediate level course in the field of epidemiology. Topics include causal inference; measurement of disease rates; inferential reasoning; and research study designs including ecologic, case-control, cohort, intervention trials, and meta-analytic designs (potential sources of bias, confounding, and effect modification in each research design are explored in depth); topics in clinical epidemiology including the use of likelihood ratios, receiver operator curves, and the sensitivity, specificity, predictive value of a test; and a brief introduction to logistic regression, survival analysis, and decision analysis. The readings from this course are drawn primarily from advanced epidemiology textbooks (Kleinbaum, Rothman, Miettinen). The course is intended to provide a firm foundation for students who will subsequently enroll in 250C.

Rules & Requirements

Epidemiologic Methods I: Read More [+]
Prerequisites: 142 (may be taken concurrently)

Rules & Requirements

Epidemiologic Methods II: Read Less [-]
PB HLTH 250C Advanced Epidemiologic Methods 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course will cover a series of advanced analytical methods for epidemiologic research, drawing heavily on concepts covered in PH 250B. The course consists of a series of modules, including modeling of epidemiological measures of effect, Bayesian methods, instrumental variable analysis, mediation analysis, missing data, sensitivity analysis and methods to address sources of systematic error in epidemiologic research. Hands-on application is emphasized. Class time will consist of lectures, class discussion, student presentations and a weekly practicum.

Rules & Requirements
Prerequisites: 241, 245, 250B, 252, or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 2 hours of laboratory per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Bradshaw

PB HLTH N250A Epidemiologic Methods 3 Units
Terms offered: Summer 2024 Second 6 Week Session, Summer 2023 Second 6 Week Session, Summer 2022 Second 6 Week Session
This introductory graduate-level course presents the principles and methods of epidemiology, including descriptive and analytic approaches to assessing the distributions of health, disease, and injury in populations and factors that influence those distributions. The emphasis is on developing an understanding of concepts, rather than quantitative methods, although calculations are involved. Through the combination of lectures, readings, critical review of papers, and problem sets, students without prior coursework in epidemiology will acquire the core competencies in epidemiology expected of all MPH graduates.

Objectives & Outcomes
Course Objectives:
Calculate basic epidemiology measures.
Communicate epidemiologic information to lay and professional audiences.
Critically evaluate the strengths and limitations of epidemiologic research publications.
Draw appropriate inferences from epidemiologic data.
Identify key sources of data for epidemiologic purposes
Recognize the important contribution of epidemiology to scientific, ethical, economic and political discussion of health issues.
Understand basic ethical principles pertaining to epidemiologic studies.
Understand public health problems in epidemiologic terms.
Use the basic terminology and definitions of epidemiology.

Rules & Requirements
Prerequisites: There are no prerequisites, although it is advantageous to have taken or be concurrently taking an introductory course in biostatistics (e.g., PH 141 or PH 142)
Credit Restrictions: Students will receive no credit for PB HLTH N250A after completing PB HLTH 250A, PB HLTH W250, or PB HLTH N250A.
A deficient grade in PB HLTH N250A may be removed by taking PB HLTH 250A, PB HLTH W250, or PB HLTH N250A.

Hours & Format
Summer: 6 weeks - 8 hours of lecture and 4 hours of discussion per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.

Epidemiologic Methods: Read Less [-]
PB HLTH W250 Epidemiologic Methods I 3 Units
Terms offered: Spring 2024, Fall 2023, Spring 2023
This introductory graduate course presents principles & methods of epidemiology, including descriptive & analytic approaches to assessing the distributions of health, disease & injury in the population & factors influencing those distributions. Emphasis is on developing an understanding of concepts, rather than quantitative methods. Basic calculations are involved. Course consists of readings, critical review of epidemiology papers, brief video lectures to explain key concepts, quizzes & exams that allow students to practice applying epidemiological concepts. Students without prior coursework in epidemiology will acquire the core competencies in epidemiology expected of all MPH graduates. Course shares the same content & learning of PH 250A

Objectives & Outcomes
Course Objectives: Calculate basic epidemiology measures. Communicate epidemiologic information to lay and professional audiences. Critically evaluate the strengths and limitations of epidemiologic research publications. Draw appropriate inferences from epidemiologic data. Identify key sources of data for epidemiologic purposes. Recognize the important contribution of epidemiology to scientific and ethical discussion of health issues. Understand basic ethical principles pertaining to epidemiologic studies. Understand public health problems in epidemiologic terms. Use the basic terminology and definitions of epidemiology.

Rules & Requirements
Prerequisites: Concurrent or previous enrollment in an introductory biostatistics course (e.g., W142)

Hours & Format
Fall and/or spring:
7 weeks - 6 hours of web-based lecture per week
15 weeks - 3 hours of web-based lecture per week

Online: This is an online course.

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: McCoy

PB HLTH W250B Epidemiologic Methods II 4 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This course is an intermediate level course in epidemiology. It replaces previously approved and delivered courses PHW250F and PHW250G. Topics include causal inference; measurement of disease rates; inferential reasoning; research study designs, ecological, case-control, cohort, intervention trials, meta-analytic designs; potential sources of bias, confounding, effect modification in research design are explored in depth; topics in clinical epidemiology, likelihood ratios, receiver operator curves, the sensitivity, specificity, predictive value of a test; brief introduction to logistic regression and survival analysis. Topics are covered at a advanced level than PH250A or PHW250. Readings from this course provide a firm foundation for PH250C.

Objectives & Outcomes
Student Learning Outcomes:
• Apply causal frameworks to the assessment of causality in associations
• Assess the extent of bias in studies and calculate bias-corrected measures
• Calculate and interpret measures of disease and association.
• Define the major study designs, including their strengths and weaknesses, and demonstrate their appropriate applications
• Define, calculate and interpret effect measure modification on different scales
• Define, calculate and interpret power, sample size, confidence intervals and p-values.
• Explain sources of bias in studies
• Explain the purposes, mechanics and limitations of matching in study designs
• Identify and apply appropriate analytic techniques for study questions, and interpret coefficients and other quantities estimated using these techniques.
• Identify appropriate applications of measures of disease and association.
• Identify design and analysis approaches to reduce bias in studies
• State the purposes of screening, and calculate and interpret screening measures. Explain the purposes and process of systematic review and meta-analysis.

Rules & Requirements
Prerequisites: PBHLTH 150A, PBHLTH 250A or PBHLTH W250

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of web-based lecture and 2 hours of web-based discussion per week

Online: This is an online course.

Additional Details
PB HLTH W250F Epidemiologic Methods II: Part 1 3 Units
Terms offered: Fall 2019, Fall 2018
This course is intended as an intermediate level course in the field of epidemiology. Topics include causal inference; measurement of disease rates; inferential reasoning; and research study designs including ecologic, case-control, cohort, intervention trials, and meta-analytic designs. These topics are covered at a more advanced level than in PH250A or PHW250. The readings from this course are drawn primarily from advanced epidemiology textbooks (e.g., Kleinbaum, Rothman). The course is intended to provide a firm foundation for students who will later enroll in 250C.

Rules & Requirements
Prerequisites: PB HLTH 150A, PB HLTH 250A, or PB HLTH W250

Hours & Format
Fall and/or spring: 8 weeks - 6 hours of web-based lecture per week
Summer: 8 weeks - 6 hours of web-based lecture per week
Online: This is an online course.

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: COLFORD, BENJAMIN-CHUNG

PB HLTH W250G Epidemiologic Methods II: Part 2 3 Units
Terms offered: Fall 2019, Fall 2018
This course is intended as an intermediate level course in the field of epidemiology. Topics include potential sources of bias, confounding, and effect modification in each research design are explored in depth); topics in clinical epidemiology including the use of likelihood ratios, receiver operator curves, and the sensitivity, specificity, predictive value of a test; and a brief introduction to logistic regression and survival analysis. These topics are covered at a more advanced level than in PH250A or PHW250. The readings from this course are drawn primarily from advanced epidemiology textbooks (e.g., Kleinbaum, Rothman). The course is intended to provide a firm foundation for students who will later enroll in 250C.

PB HLTH 251C Causal Inference and Meta-Analysis in Epidemiology 2 Units
Terms offered: Fall 2017, Fall 2016, Fall 2015
This course will review the theoretical aspects of causal inference, literature review, and meta-analysis, but its focus will be more on the practical aspects of these topics that are not commonly found in textbooks or presented in classes on epidemiologic theory. It is hoped that the student develops the day-to-day skills necessary to complete and present a well-documented, accurate, and thorough review of epidemiologic literature.
Causal Inference and Meta-Analysis in Epidemiology: Read More [+]
Rules & Requirements
Prerequisites: Students in the first semester of the second year of the epidemiology/biostatistics Master’s of Public Health program. (Students from other programs welcome.)
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week
Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.

PB HLTH 251D Applied Epidemiology Using R 2 Units
Terms offered: Fall 2019, Fall 2018, Fall 2017
This is an intensive, one-semester introduction to the R programming language for applied epidemiology. R is a freely available, multi-platform (Mac OS, Linux, and Windows, etc.), versatile, and powerful program for statistical computing and graphics (http://www.r-project.org). This course will focus on core basics of organizing, managing, and manipulating epidemiologic data; basic epidemiologic applications; introduction to R programming; and basic R graphics.
Applied Epidemiology Using R: Read More [+]
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week
Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Aragon
Applied Epidemiology Using R: Read Less [-]

PB HLTH W251 R for Public Health 2 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
The course examines principles & methods underlying the use of R, emphasizing multi-disciplinary, collaborative, & real world uses. We will emphasize practices for collaborative coding using Git/GitHub repositories for storing & sharing code to benefit not only your current collaborators but your most frequent collaborator. We will introduce best practices for organizing data & projects, how to create reproducible examples (a.k.a reprex) for when you get stuck and need to ask the R community for help (but can’t share a full dataset because it’s too large or contains confidential information). Application of principles will be taught through scenarios that public health practitioners encounter.
R for Public Health: Read More [+]
Objectives & Outcomes
Course Objectives:
Effectively engage with public health practitioners in the use of R to address current public health and/or policy issues;
Apply knowledge of R to support ongoing analytic work in epidemiology and biostatistics;
Create meaningful visualizations of data and have a basic understanding of tools available through R to present data (including R markdown, R Shiny)
Develop strategies for addressing issues that arise when combining data from multiple, complex data sources;
Identify best practices for project management, programming, and version control when contributing data to evaluate and/or support effective public health interventions;
Leverage existing open-source resources for continued learning and problem solving.
Select appropriate methods for importing, cleaning, and analyzing data within R;
Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture per week
Online: This is an online course.
Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Wheeler
R for Public Health: Read Less [-]
PB HLTH W251B Data Visualization for Public Health 2 Units
Terms offered: Fall 2023, Fall 2022
In this course we will discuss the theory behind effective graphical design, how to apply this theory to communicating health data to different audiences, and how to produce a variety of graphical types using primarily the ggplot command in the statistical analysis program R. There are two lectures per week accompanied by readings. Generally, the course content and assignments alternate weekly between theory and R programming.

Data Visualization for Public Health: Read More [+]

Objectives & Outcomes
Course Objectives:
• Apply color theory and accessibility principles to reach the widest audience.
• Create a data dashboard using REDCap or Tableau.
• Create graphics for print and digital media.
• Effectively communicate your messages, both graphically and verbally.
• Leverage existing graphical applications, including mapping/census data
• Produce different styles of graphics using R.
• Understand the theory behind good graphical design for presenting health data.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week
Online: This is an online course.

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Mocello

PB HLTH 252 Epidemiological Analysis 4 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This 4-unit course will cover modern quantitative methods relevant to epidemiologic research drawing heavily on concepts covered in PB HLTH 250B. Course topics include generalized linear models, Kaplan-Meier estimation, survival distributions, and models for parametric and semi-parametric survival analysis. We will also cover methods for confounder selection, dose-response modeling, and interaction and effect modification.

Epidemiological Analysis: Read More [+]

Objectives & Outcomes
Course Objectives: Apply the appropriate statistical model to estimate epidemiologic effects of interest
Articulate necessary assumptions for different methods, and accurately interpret results
Identify measures of association that can be estimated under various study designs
d. Understand analyses presented in epidemiologic literature, and evaluate their soundness
e. Follow future developments in epidemiologic research

Rules & Requirements
Prerequisites: PB HLTH 250B, PB HLTH 241, or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Bradshaw

Epidemiological Analysis: Read Less [-]
PB HLTH 252B Infectious Disease Modeling 3 Units
Terms offered: Fall 2023, Spring 2022, Spring 2021
This course will lead students through the process of designing mathematical models of infectious diseases, fitting these models to data, and using them as public health tools to design effective control strategies. Examples are drawn from COVID-19, HIV, influenza, Ebola, and mosquito-borne diseases such as malaria and Zika virus. Each class consists of a lecture followed by a computer-based activity to apply the material. Students also work on a project in which they design their own model and use it to answer a specific research question.
Objectives & Outcomes
1. Design compartmental models of infectious diseases,
2. Understand the role of heterogeneity, especially in sexually-transmitted infectious,
3. Understand the importance of stochasticity in outbreak modeling,
4. Estimate parameters, such as the basic reproductive number, R0, from epidemiological data,
5. Fit mathematical models to incidence and prevalence data,
6. Incorporate interventions into infectious disease models.
Rules & Requirements
Prerequisites: Students should be able to write and interpret ordinary differential equations, and to manipulate beginner-level code in R
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Marshall
Infectious Disease Modeling: Read More [+]

PB HLTH 252C Intervention Trial Design 2 Units
Terms offered: Spring 2024, Spring 2023, Fall 2022
Students learn through pre-recorded lectures. There are graded student presentations of final course project to interpret and design clinical and population-level field trials in addition to a written midterm. Topics: formulation of a testable trial hypothesis; identification of appropriate study populations; blinding (including indices for assessment); randomization (including traditional and adaptive); sample size estimation; recruitment strategies; data collection systems; quality control and human subjects responsibilities; adverse effects monitoring; improving participant adherence; use of surrogate outcomes; preparation of a meta-analysis summarizing a group of trials.
Objectives & Outcomes
1) identify whether appropriate steps have been taken to provide transparency in a published Trial;
2) understand and apply basic principles to determine an appropriate sample size for a Trial;
At the completion of the course, students will be able to: 1) critique published Intervention Trials with respect to design and potential sources of bias:
Rules & Requirements
Prerequisites: PBHLTH 250A or equivalent introductory Epidemiology course
Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture and 1 hour of discussion per week
Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Colford
Intervention Trial Design: Read Less [-]
PB HLTH 252D Introduction to Causal Inference 4 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
This course presents a general framework for causal inference using directed acyclic graphs, non-parametric structural equation models, and counterfactuals. Marginal structural models and causal effect estimation using inverse probability of treatment weighting, G-computation, and targeted maximum likelihood are introduced. In two-part presentations, students will define and implement research questions.

Introduction to Causal Inference: Read More [+]

Rules & Requirements
Prerequisites: 241 or C240A (can be taken concurrently); 245 or similar course covering multivariable linear and logistic regression analysis; for epidemiology students, 250C, or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 2-2 hours of lecture, 0-2 hours of discussion, and 2-0 hours of laboratory per week

Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Petersen

Introduction to Causal Inference: Read Less [-]

PB HLTH 252E Advanced Topics in Causal Inference 4 Units
Terms offered: Spring 2023, Fall 2021, Fall 2020
The course will be conducted as a seminar with readings and discussions on a range of more advanced topics. We will cover case-control designs; longitudinal causal models, identifiability and estimation; direct and indirect effects; dynamic regimes (individualized treatment rules); approaches for diagnosing and responding to violations in the positivity assumption. Additional topics may include stochastic interventions, community-based interventions, and Collaborative-TMLE. There will also be some guest lectures and presentations from current students and faculty members.

Advanced Topics in Causal Inference: Read More [+]

Rules & Requirements
Prerequisites: Public Health 252D or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture, 1 hour of discussion, and 1 hour of laboratory per week

Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Bradshaw

Epidemiologic Analysis: Read Less [-]
PB HLTH W252A Introduction to Causal Inference and the Causal Roadmap 4 Units
Terms offered: Spring 2024, Spring 2023
With the ongoing “data explosion”, methods to delineate causation from correlation are perhaps more pressing now than ever. This course will introduce a general framework for Causal Inference in Public Health: 1) clear statement of the research question, 2) definition of the causal model and effect of interest, 3) assessment of identifiability, 4) choice and implementation of estimators including parametric and non-parametric methods, and 5) appropriate interpretation of findings. The statistical methods include G-computation, inverse probability weighting (IPW), and targeted minimum loss-based estimation (TMLE) with machine learning. Introduction to Causal Inference and the Causal Roadmap: Read More [+]

Objectives & Outcomes

Course Objectives:
1. Translate a research question and background knowledge into a causal model (directed acyclic graphs and non-parametric structural equation models).
2. Define the target causal parameter with counterfactuals.
3. Assess identifiability of the target causal parameter and express it as a parameter of the observed data distribution.
4. Understand the challenge posed by parametric estimation approaches and apply machine learning methods.
5. Understand the properties of and apply 3 estimators: G-computation, inverse probability weighting (IPW), and targeted minimum loss-based estimation (TMLE) with Super Learner.
6. Understand how to appropriately address missing outcomes, which may be differentially measured.
7. Apply course concepts to address cause-and-effect in a real data application.
8. Be ready to explore more advanced settings for Causal Inference.

Rules & Requirements

Prerequisites: Familiarity with basic probability theory and experience conducting multivariable regression analyses (i.e., generalized linear models). This material is often, but not exclusively, covered in graduate-level courses on introductory statistics and regression (e.g., PH142 Intro to Probability/Statistics and PHW241 Intermediate Biostatistics for Public Health)

Hours & Format
Fall and/or spring: 15 weeks - 4 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Balzer

PB HLTH 253B Epidemiology and Control of Infectious Diseases 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
A discussion of major infectious diseases with emphasis on disease surveillance, investigative procedures, and prevention programs. Emphasis is on current problems in health agencies at a state, national, and international level.

Objectives & Outcomes

Course Objectives:
1. Translate a research question and background knowledge into a causal model (directed acyclic graphs and non-parametric structural equation models).
2. Define the target causal parameter with counterfactuals.
3. Assess identifiability of the target causal parameter and express it as a parameter of the observed data distribution.
4. Understand the challenge posed by parametric estimation approaches and apply machine learning methods.
5. Understand the properties of and apply 3 estimators: G-computation, inverse probability weighting (IPW), and targeted minimum loss-based estimation (TMLE) with Super Learner.
6. Understand how to appropriately address missing outcomes, which may be differentially measured.
7. Apply course concepts to address cause-and-effect in a real data application.
8. Be ready to explore more advanced settings for Causal Inference.

Rules & Requirements

Prerequisites: Prior degree or courses in biomedical sciences and consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Reingold

PB HLTH 253D Behavior and Policy Science in HIV Treatment and Prevention 3 Units
Terms offered: Spring 2016, Spring 2015, Spring 2014
This course will integrate various social science disciplines and apply these perspectives to problems of HIV treatment and prevention, particularly in the developing world. Throughout the academic term, students will apply knowledge of behavioral science, epidemiology, quantitative and qualitative methods in the analysis of developing and evaluating HIV-related treatment and prevention interventions, including policy interventions. Course requirements will include the preparation of a major paper recommending interventions, country level budgets and evaluation designs for a specific developing country. Specific requirements for this paper will be distributed during the third class session.

Objectives & Outcomes

Course Objectives:
1. Translate a research question and background knowledge into a causal model (directed acyclic graphs and non-parametric structural equation models).
2. Define the target causal parameter with counterfactuals.
3. Assess identifiability of the target causal parameter and express it as a parameter of the observed data distribution.
4. Understand the challenge posed by parametric estimation approaches and apply machine learning methods.
5. Understand the properties of and apply 3 estimators: G-computation, inverse probability weighting (IPW), and targeted minimum loss-based estimation (TMLE) with Super Learner.
6. Understand how to appropriately address missing outcomes, which may be differentially measured.
7. Apply course concepts to address cause-and-effect in a real data application.
8. Be ready to explore more advanced settings for Causal Inference.

Rules & Requirements

Prerequisites: Familiarity with basic probability theory and experience conducting multivariable regression analyses (i.e., generalized linear models). This material is often, but not exclusively, covered in graduate-level courses on introductory statistics and regression (e.g., PH142 Intro to Probability/Statistics and PHW241 Intermediate Biostatistics for Public Health)

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Ekstrand, Morin

Introduction to Causal Inference and the Causal Roadmap: Read Less [-]
PB HLTH 253G Sexual Health Promotion and Sexually Transmitted Disease Control 2 Units
This seminar will explore current issues and controversies in public health approaches to sexual health promotion and STD control with a focus on pragmatic skills including program development and evaluation. Students will engage in independent research with interactive group discussions and student presentations.
Sexual Health Promotion and Sexually Transmitted Disease Control: Read More [+]
Rules & Requirements
Prerequisites: Graduate students, undergraduates with consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

Instructor: Bernstein
Sexual Health Promotion and Sexually Transmitted Disease Control: Read Less [-]

PB HLTH W253 Outbreak Investigations 3 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
The purpose of this course is to provide students with an overview of outbreak investigations in public health. This course will teach students why and how clusters of illnesses/epidemics are investigated. Methods and approaches required for such investigations will be discussed in detail, using published and unpublished material from the scientific literature.
Outbreak Investigations: Read More [+]
Rules & Requirements
Prerequisites: Students must be matriculated in the On-campus Online MPH Program in order to enroll in this course
Repeat rules: Course may be repeated for credit with instructor consent.
Hours & Format
Fall and/or spring: 7 weeks - 6 hours of web-based lecture per week
Online: This is an online course.
Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.

PB HLTH 255A Social Epidemiology 4 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This is a breadth course intended to provide an overview of the field of social epidemiology and its role in understanding the social determinants of population health and health disparities. Given the breadth of social epidemiology, 255A provides a systematic and selective overview of literature covering the history and development of the field, theoretical perspectives and conceptual approaches, major topical areas and current controversies related to theory, research methods and research findings. Principles emphasized throughout the course (ecological model, measurement and causality) will provide a framework for critical analysis and synthesis across content areas. This is not a methods course.

Grading: Letter grade.
Instructor: Nuru-Jeter
Social Epidemiology: Read Less [-]
PB HLTH 255C Mental Health and Psychopathology 3 Units
Terms offered: Spring 2021, Spring 2019, Fall 2013
This doctoral seminar is designed to provide an understanding of the complex (and often interactive) individual and environmental conditions that increase the risk of psychopathology in individuals across the life span. We will start by learning about general concepts important to an understanding of psychopathology and prevention of psychopathology, including the "biopsychosocial model," "psychological resilience," and different levels of preventive interventions. For each different area of psychopathology, we will consider: a) the core feature of disorder; b) key theory and empirical evidence regarding etiology and course, with a particular emphasis on understanding the range of risk and protective factors on the individual, family, and community level; and c) the implications of etiological understanding for public health efforts to prevent the particular disorder.

Mental Health and Psychopathology: Read More [+]

Rules & Requirements
Prerequisites: Open to doctoral students or with consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of seminar per week

Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Ozer

Mental Health and Psychopathology: Read Less [-]

PB HLTH 255D Methods in Social Epidemiology 2 Units
Terms offered: Fall 2022, Spring 2022, Spring 2020
This course is designed to review, evaluate, and apply methods currently used in the field of social epidemiology. The course aims to teach approaches to forming clear research questions, and selecting the best method(s) to answer the questions posed. Initially we will discuss approaches to defining clear and specific research questions. We will then discuss recent controversies around the meaning of questions posed in social epidemiology, and the ability of currently used methods to answer questions in social epidemiology. Finally we will review, evaluate, and apply a range of different methods that are or could be used to answer questions in social epidemiology, again emphasizing the types of questions answered by these methods, and their ability to address the challenges to effectively answering questions in social epidemiology. There will be a mixture of discussion and lecture depending on the topic, with student participation and questions strongly encouraged.

Methods in Social Epidemiology: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

Grading: Letter grade.
Instructors: Barcellos, Holland

Human Genome, Environment and Public Health: Read Less [-]
PB HLTH C256 Human Genome, Environment and Public Health 4 Units
Terms offered: Spring 2024, Spring 2023, Fall 2020
This introductory course will cover basic principles of human/population genetics and molecular biology relevant to molecular and genetic epidemiology. The latest methods for genome-wide association studies and other approaches to identify genetic variants and environmental risk factors important to disease and health will be presented. The application of biomarkers to define exposures and outcomes will be explored. Recent developments in genomics, epigenomics and other ‘omics’ will be included. Computer and wet laboratory work will provide hands-on experience.

Rules & Requirements

Prerequisites: Introductory level biology/genetics course, or consent of instructor. Introductory biostatistics and epidemiology courses strongly recommended

Credit Restrictions: Students will receive no credit for PB HLTH C256 after completing CMPBIO 156. A deficient grade in PB HLTH C256 may be removed by taking CMPBIO 156.

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture and 2 hours of laboratory per week

Additional Details

Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Barcellos, Holland
Also listed as: CMPBIO C256

Human Genome, Environment and Public Health: Read More [+]

PB HLTH C256A Human Genome, Environment and Human Health 3 Units
Terms offered: Spring 2017
This introductory course will cover basic principles of human/population genetics and molecular biology relevant to understanding how data from the human genome are being used to study disease and other health outcomes. The latest designs and methods for genome-wide association studies and other approaches to identify genetic variants, environmental risk factors and the combined effects of gene and environment important to disease and health will be presented. The application of biomarkers to define exposures and outcomes will be explored. The course will cover recent developments in genomics, epigenomics and other ‘omics’, including applications of the latest sequencing technology and characterization of the human microbiome.

Rules & Requirements

Prerequisites: Introductory level biology course. Completion of introductory biostatistics and epidemiology courses strongly recommended and may be taken concurrently

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details

Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Barcellos, Holland

PB HLTH 260F Infectious Disease Research in Developing Countries 2 Units
Terms offered: Spring 2023, Fall 2021, Spring 2021
The objective of this course is to provide M.P.H. and Ph.D. students with an appreciation and understanding of the complex issues involved in conducting scientific, laboratory-based investigation in developing countries. We will discuss the many obstacles to establishing and sustaining research projects, such as poor infrastructure, insufficient financial and material resources, and lack of scientific information and interaction. More importantly, we will identify innovative solutions to overcoming these obstacles. The first half of the course will consist of presentations by U.S. and developing countries investigators who have long-term research experience in Latin America, Asia, and Africa. We will also discuss related issues such as ethical considerations, equitable collaborations, research capacity strengthening. During the second half of the course, students will give presentations on topics of their choice.

**PB HLTH W260 Infectious Diseases 3 Units**

Terms offered: Fall 2022, Fall 2021, Fall 2020

The purpose of this course is to provide students with knowledge and approach to understand key principles that apply to infectious diseases recognized to be of major public health importance in the USA and globally. The students will learn about the important infectious disease issues and obstacles that arise at the population level, and how to address them through science, public health practices, and policy.

Infectious Diseases: Read More [+]

**Objectives & Outcomes**

**Student Learning Outcomes:**
1. understand definitions used in discussing, describing, and reporting about infectious diseases.
2. understand US and WHO-recommended immunization practices and policies, as well as common obstacles to their universal implementation.
3. propose new ideas about how to address obstacles related to immunization policies; challenges in developing new vaccines.
4. know about the major drug-resistant infectious disease problems in the US and abroad; factors that select for drug resistance, and what needs to be done to prevent and control the spread of drug-resistant infections.
5. describe hospital infection surveillance systems; hospital infection control stewardship principles.
6. understand the rationale behind screening tests for HiAIDs and other STIs.
7. describe approaches to hepatitis screening, blood donation and blood bank screening for hepatitis viruses; differences in TB contact tracing programs in the US and elsewhere; BCG vaccination vs preventive treatment for latent TB infection in the USA.

**Rules & Requirements**

**Prerequisites:** Students must be matriculated in the On-campus Online MPH Program to enroll in this course

**Repeat rules:** Course may be repeated for credit with instructor consent.

**Hours & Format**

**Fall and/or spring:** 7 weeks - 6 hours of web-based lecture per week

**Online:** This is an online course.

**Additional Details**

**Subject/Course Level:** Public Health/Graduate

PB HLTH 263 Public Health Immunology 3 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This course will be the principal immunology course for students in the field of public health. It is designed to teach both the basic biology of the human immune system and its response in health and disease, especially the specific response of the human immune system to major human pathogens. Four areas will be explored: 1) components of the immune system (spectrum of cell types and cell products); 2) different arms of the immune system including humoral, cell-mediated, innate, and mucosal immunity; 3) specific immune response to infection caused by viral, bacterial, fungal, and parasitic pathogens; and 4) disorders of the immune system unrelated to infectious disease. Through this course, students should not only gain a basic understanding of the human immune system, but also learn the functions and responses of the human immune system to diseases of infectious and non-infectious nature, and the relevance of these interactions in the context of public health problems.

Rules & Requirements
Prerequisites: 260A (prior or concurrent). Graduate standing. Public Health majors by consent of instructor
Credit Restrictions: Students will receive no credit for 263 after taking Molecular and Cell Biology 150.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Stanley

PB HLTH 264 Capstone Seminar in Infectious Diseases and Vaccinology 2 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
Examination of scientific, social, and policy dimensions of issues involving infectious diseases. Students select one topic for in-depth analysis and present findings in a public debate. Topics vary from year to year.

Rules & Requirements
Prerequisites: Second-year Infectious Diseases MPH students only

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture and 1 hour of discussion per week

PB HLTH 265 Molecular Parasitology 3 Units
Terms offered: Fall 2023, Fall 2021, Fall 2019
Advanced course in the molecular aspects of parasite immunology, molecular biology, genetics, biochemistry, and genomics. For each parasite, the following areas will be covered: biology; disease spectrum; epidemiology; pathogenesis, immunology; and vaccine development. The lectures will focus on "state-of-the-art" research in relation to molecular mechanisms of pathogenesis, parasite adaptations for survival within the host, and strategies for drug and vaccine development and disease control and prevention. Course content will rely heavily on current literature.

Rules & Requirements
Prerequisites: Upper division courses in molecular biology, parasitology, biochemistry, immunology, microbiology, or consent of instructor. Familiarity with reading primary research is recommended
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 10 weeks - 3 hours of lecture and 2 hours of discussion per week

Molecular Parasitology: Read Less [-]
PB HLTH 266A Foodborne diseases 2 Units
Terms offered: Spring 2019, Fall 2016, Fall 2015
This course will cover public health, microbiological, social, and economical issues related to foodborne diseases. Three areas will be explored: 1) categories, clinical manifestations, and disease processes of foodborne illnesses; 2) etiological agents causing foodborne illnesses; 3) investigation and prevention of foodborne illness. The course will discuss different types of foodborne diseases, clinical manifestations, and the interactions between etiological agents (pathogens and non-pathogens) and human hosts. We will cover pathogens that are the most frequently associated with foodborne illness including bacterial and viral pathogens such as Salmonella, E coli, hepatitis viruses and Norwalk-like gastroenteritis viruses. We will also study non-pathogen agents such as heavy metal, pesticide, and toxic chemicals. Futhermore, the course will discuss how to identify the etiological agents in outbreaks and possible measures that can be taken to minimize the risk to the public including vaccines and education. Finally, we will explore the social and economic issues involved in the food production, distribution, and consumption that contribute to foodborne diseases.

Foodborne diseases: Read More [+]

Rules & Requirements

PB HLTH 266B Zoonotic Diseases 2 Units
Terms offered: Fall 2021, Spring 2021, Fall 2020
This is a graduate (Ph.D. and MPH) level course designed to describe the major zoonoses and their life cycle, disease manifestations, epidemiology, and methods for prevention and control. Available treatments, diagnostics, and public health and agriculture surveillance and “forecasting” programs will also be discussed. The most recent research on the molecular and cellular basis of the mechanisms and consequences of the “species” jump from other animals to humans will be reviewed. The global nature of zoonotic diseases and the integration of multiple disciplines (molecular biology, immunology, epidemiology, evolutionary biology, ecology, animal science, veterinary medicine, etc.) will be emphasized.

Zoonotic Diseases: Read More [+]

Objectives & Outcomes

Course Objectives: Recognize, understand and be able to describe the public health importance of presented zoonotic diseases
Understand the agent’s life cycle (agent, host, and environment interaction), including the source(s) or reservoir(s) and host range
Understand the factors involved in the susceptibility and resistance of the human host to the cross-species transmission of disease

Rules & Requirements

Prerequisites: Public Health 260A or equivalent Infectious Diseases course (may be taken concurrently)

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details

Subject/Course Level: Public Health/Graduate

Grading: Letter grade.

Instructor: Dailey

Zoonotic Diseases: Read Less [-]
PB HLTH 266C Healthcare-Associated Infections 2 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This course will examine the principles underlying the control of infections in healthcare facilities (the emphasis will be on hospitals), the causes of these infections, current important topics in this field, and future trends. Students will develop an understanding of the national and local programs involved in healthcare-associated infections (HAI’s), the major causes of HAI’s antimicrobial stewardship, specific agents and procedures causing HAI’s and how to prevent HAI’s.

Objectives & Outcomes

Course Objectives: 1) Understand the public health impact of HAIs. 2) Know the important causes of HAIs. 3) Formulate a plan to address each of the causes. 4) Address in-depth one important issue about HAIs.

Student Learning Outcomes: At the conclusion of the course, students will understand the public health impact of HAIs, why they occur, and what to do to prevent them. They will also appreciate how we obtain and process the data that informs our interventions.

Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture and 1 hour of discussion per week

PB HLTH 266D Homelessness and the Public’s Health 2 Units
Terms offered: Spring 2023
Homelessness is an epidemic in the United States affecting more than 500,000 people each day. It impacts people of all races, age, and family situations, and it has enormous consequences for physical and mental health. There is no single cause, and no single solution. The focus of this course is the relationship between homelessness and health. We will discuss the range of causes for homelessness and how each of these is correlated to individual health, public health, public policy, and the law. We will explore various strategies and approaches through readings, guest lecturers, and student-led discussions.

Objectives & Outcomes

Course Objectives: - Develop plans to address this important public health problem. - Understand the consequences of homelessness on an individual’s health. - Understand the obstacles to addressing homelessness. - Understand the root causes of homelessness and various strategies to address them.

Student Learning Outcomes: 1) Understand the root causes of homelessness and various strategies to address them. 2) Understand the consequences of homelessness on an individual’s health. 3) Understand the obstacles to addressing homelessness. 4) Develop plans to address this important public health problem.

Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Offered for satisfactory/unsatisfactory grade only.
Instructor: Swartzberg, Davis
PB HLTH 267B Characterization of Airborne Contaminants 4 Units
Terms offered: Spring 2023, Spring 2021, Spring 2019
Principles underlying the use of air monitoring methods in industry and the environment. Topics include behavior of gases, vapors, and aerosols; mechanisms of absorption and elimination of inhaled toxicants; methods for measuring of airborne chemicals and particles.
Rules & Requirements
Prerequisites: Graduate standing in environmental health sciences or consent of instructor
Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 3 hours of fieldwork per week

PB HLTH W267 Applied GIS for Public Health Practice 3 Units
Terms offered: Not yet offered
This course will familiarize students with the principles, methods, and techniques necessary to apply Geographic Information Systems (GIS) in diverse public health practice settings. Case studies will be presented to introduce the application of GIS technologies for rendering disease surveillance maps, developing effective spatial data visualization, creating compelling and credible spatial risk maps, and acquiring and processing positioning information for health applications.
Rules & Requirements
Credit Restrictions: Students will receive no credit for PB HLTH W267 after completing PB HLTH 272B, PB HLTH 277, or PB HLTH 267. A deficient grade in PB HLTH W267 may be removed by taking PB HLTH 272B, PB HLTH 277, PB HLTH 272B, PB HLTH 277, or PB HLTH 267.
Hours & Format
Fall and/or spring: 8 weeks - 6 hours of web-based lecture per week

PB HLTH W268 Water, Sanitation and Hygiene (WaSH) for Health and Development 3 Units
Terms offered: Summer 2024 Second 6 Week Session, Summer 2023 Second 6 Week Session, Summer 2022 Second 6 Week Session
This course is designed for students who may be interested in working in countries where contaminated water, inadequate sanitation and poor hygiene (WaSH) are the cause of serious health problems. In this course, important concepts in WaSH will be covered so that students can understand what is needed to develop, implement, monitor and evaluate a WaSH program. It emphasizes concepts that are needed to develop effective, appropriate, accessible and affordable WaSH interventions to reduce the global burden of disease.
Objectives & Outcomes
1. Identify major water, sanitation and hygiene hazards and understand how hazards differ between different countries, watersheds, climates, cultures and regions.
2. Describe key social determinants of health that drive WaSH inequities
3. Understand the primary WaSH interventions that have been shown to be effective at reducing morbidity and mortality
4. Conduct vulnerability assessments of community supplies of water and sanitation systems to assess ability to provide essential services.
5. Describe the relationship between WaSH technologies, behavioral change communications and the enabling environment and how the three must work in tandem to result in sustained improvements.
6. Critically analyze WaSH-related issues associated with rapid growth of urban populations in developing countries.
Hours & Format
Summer: 7 weeks - 5.5 hours of lecture per week

Online: This is an online course.
Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.

Formerly known as: Public Health W277
Applied GIS for Public Health Practice: Read Less [-]
PB HLTH 269D Ergonomics Seminar 2 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
Readings and lectures in occupational biomechanics. Topics to be covered are muscle, tendon, and joint biomechanics, material handling models, mechanisms of injury, hand tool design, and instrumentation issues. Students will prepare critical reviews of recent publications and design an engineering intervention to reduce work-related risk factors.
Ergonomics Seminar: Read More [+]

Rules & Requirements
Prerequisites: 269C or consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Rempel

PB HLTH 269E Current Topics in Environmental Medicine 2 - 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
Topics in environmental medicine will provide students with an overview of the health impacts, disease mechanisms, and public health controversies related to selected environmental exposures. The course will cover established environmental diseases as well as impacts of some emerging exposures of concern. The focus will primarily be on pathophysiology, issues related to exposure pathways, and the susceptibilities of specific human populations. No prior medical knowledge required.
Current Topics in Environmental Medicine: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 2-3 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Harrison, Seward

PB HLTH 269A Introduction to Physical Ergonomics 3 Units
Terms offered: Fall 2017
Students will identify the components of occupational tasks that contribute to musculoskeletal injury, quantify the risks using the most relevant ergonomic assessment tools, and integrate that information into conclusions regarding the acceptability of the risk. This course will challenge students to assess many practical examples from a wide variety of workplace sectors, including manufacturing, health care, agriculture and others, and interpret data from sources that will not always agree, so that the decisions can be made and defended.
Introduction to Physical Ergonomics: Read More [+]

Hours & Format
Fall and/or spring: 7 weeks - 8-5 hours of web-based lecture per week

Online: This is an online course.

Additional Details

PB HLTH 270 Introduction to Environmental Health Sciences 3 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
This survey course covers the breadth of hazards to chemical, biological, and physical agents of concern to environmental health professionals. Lectures are presented by experts on particular topics that emphasize the activities involved in professional practice. Students will also meet twice monthly with the instructor to discuss advanced readings and assignments related to the lecture topics. Students will conduct a project on a topic of current interest in some aspect of environmental health (under the guidance of the instructor). This course is designed for MPH students in Environmental Health Sciences and other graduate-level students interested in an overview course on environmental health.
Introduction to Environmental Health Sciences: Read More [+]

Rules & Requirements
Prerequisites: One epidemiology course; one biostatistics course (may be taken concurOne Epidemiology course; one Biostatistics course, can be concurrent. rently)

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of discussion per week

Additional Details

Instructor: M. Smith

PB HLTH 270C Practical Toxicology 2 Units
Terms offered: Spring 2019, Spring 2017, Spring 2016
This course will focus on cutting-edge issues involving real-world toxicology in drug discovery, pesticide regulation, stem cell research, etc. Many well-known toxicologists, regulators, and consultants from pharmaceutical companies, petroleum industry, private consulting firms, non-profit institutes, federal and state regulatory agencies in the Bay Area will be invited to talk to our participating students. Some of the speakers are our school's alumni who understand exactly what our students need to know before entering the real world. Learning outside the classroom will be another major focus and different from other existing toxicology courses offered at Berkeley. This new class will provide students a chance to visit some of the real-world sites allowing students to see and feel what they really need to know and to learn. To better prepare our students for the real world, we will use combined teaching/learning styles including lecture with discussion sections, site-visits, hand-on experience in a toxicology laboratory, and student group assignments or projects.
Practical Toxicology: Read More [+]

Rules & Requirements
Prerequisites: 270B or Nutrition Science and Toxicology 110 or equivalent course in toxicology

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Zhang

PB HLTH 271C Drinking Water and Health 3 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020
The course covers monitoring, control and regulatory policy of microbial, chemical and radiological drinking water contaminants. Additional subjects include history and iconography of safe water, communicating risks to water consumers and a bottled water versus tap water taste test as part of the discussion on aesthetic water quality parameters.
Drinking Water and Health: Read More [+]

Objectives & Outcomes

Student Learning Outcomes: By the end of this course, students will be expected to:
Recognize the global occurrence of waterborne contaminants and related health impacts.
Understand water quality monitoring and control of key water quality constituents.
Appreciate the complexities of the regulatory process as it pertains to public drinking water systems in the US and abroad.
Read and synthesize published and unpublished sources of information regarding drinking water and health. Prepare a literature review in journal submission format.
Using an established rubric, review and comment on a literature review (prepared by a fellow student). Rank the paper as acceptable, acceptable with minor revision, acceptable with major revision, unacceptable.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Smith

PB HLTH 271D Global Burden of Disease and Comparative Risk Assessment 3 Units
Terms offered: Spring 2016, Spring 2015, Spring 2013
The Global Burden of Disease (GBD) database utilized by provides estimates of illness, injury, and death by disease type, age, sex, and world region in a consistent and coherent manner. The course will explore the ways such a detailed database makes possible a wide range of new types of analysis of health priorities and the relationship of database will also be introduced. This seminar will also provide an opportunity for reading and discussion of the basic assumptions, data limitations, critiques, and methodological difficulties of the GBD. It is intended to be a true seminar relying heavy on class participation. The homework assignments will be greatly facilitated by use of computer spreadsheets.
Global Burden of Disease and Comparative Risk Assessment: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing or consent of instructor. Introductory epidemiology (250A or equivalent) is recommended

Hours & Format

PB HLTH 271E Science and Policy for Environment and Health 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
Scientific knowledge and analyses are important to the development of public policies that address the impact of the environment on health. The limits of existing knowledge and uncertainties in research results create significant challenges in applying science to answer critical questions. This course critically examines how scientific information is used in policy decisions. Case studies of current issues address characterization of scientific knowledge, interpretation of science in policy contexts, scientific integrity, and factors in addition to science that influence decisions. Assignments prepare students to effectively translate technical knowledge for multi-disciplinary and lay audiences and to participate in public policy proceedings. Core materials address differences between regulatory and market-based approaches; emerging paradigms including the precautionary principle and environmental justice; and key elements of risk assessment and cost-benefit analysis.

PB HLTH 271H Greener Solutions: A Safer Design Partnership 4 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
At the same time as chemistry has dramatically improved our lives, it has also exposed people to synthetic chemicals and pollutants via air, water, food, consumer products and workplaces. While government agencies work to assess and control chemical hazards, communities, workers and advocacy groups are demanding safer materials, and businesses are actively seeking to eliminate hazardous chemicals from their products and supply chains. Green chemistry aims to develop products and materials that are inherently safer for human health and the environment. The Greener Solutions course pairs interdisciplinary teams of graduate students with a partner organization seeking to solve these challenges in a specific application.

Greener Solutions: A Safer Design Partnership: Read More [+]

Rules & Requirements
Prerequisites: Graduate standing or advanced undergraduate with permission. General chemistry and organic chemistry or equivalent knowledge

Hours & Format
Fall and/or spring: 15 weeks - 4 hours of seminar per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Schwarzman, Hart-Cooper

Greener Solutions: A Safer Design Partnership: Read Less [-]
PB HLTH 271J Social Justice and Worker Health 2 Units
Terms offered: Fall 2022
Course is an overview on work as a key social determinant of health. The workplace is commonly viewed as a setting for health promotion of individual behavior change, while its potential to be a source of critical exposures that directly impact health, safety & well-being of working populations is often overlooked. Purpose of the class is to help public health practitioners build a framework for understanding the role that work & workplace conditions play in individual & community health, to introduce strategies that address work-related health inequities & facilitate the development of concrete skills in these areas. The course emphasizes worker & community organization & participation in effecting social justice & public health change.

Social Justice and Worker Health: Read More [+]

Objectives & Outcomes
Student Learning Outcomes: Define the concept of a healthy job, and describe work as a social determinant of health with an emphasis on its impact on the lives of low-wage, immigrant, and other vulnerable workers and communities.
Describe the “landscape” of work and labor dynamics, including current issues and topics in worker health and safety and the populations most affected by workplace hazards and risks.
Discuss basic theoretical and experiential concepts underlying the following public health strategies:

# Community organizing
# Labor organizing
# Training for action
# Effective partnerships
# Work-related policies

Practice skills in community organizing, popular education, training for action, and building effective partnerships that are all essential to professional community-based practice in public health.

Rules & Requirements
Repeat rules: Course may be repeated for credit with advisor consent.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of seminar per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Teran, Chang

PB HLTH 271K Introduction to Data Management and Programming in SAS for Public Health 2 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This class is an introduction to the use of the SAS programming language for managing, cleaning and analyzing biomedical data.

Introduction to Data Management and Programming in SAS for Public Health: Read More [+]

Objectives & Outcomes
Course Objectives: By the end of this course, students should be able to write SAS programs for data management, cleaning, and analysis

Student Learning Outcomes: Create and run SAS programs
# Create new variables from other data.
# Export SAS datasets
# Manipulate and transform data
# Read raw input files in various formats and create SAS datasets.
# Use SAS procedures for basic statistical inference: Chi-square tests, T-Tests, Correlations, Linear Regression, etc.
# Use basic SAS procedures to describe data numerically and graphically.
# Work with SAS datasets: sort, subset, merge, and re-format SAS datasets

Rules & Requirements
Prerequisites: It is expected that students will have taken introductory courses to both biostatistics and epidemiology (PBHLTH 142 or PBHLTH W142; PBHLTH W250A, PBHLTH 250B or PBHLTH W250, PBLTH W250F/G)

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture and 1 hour of laboratory per week

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Costello

Introduction to Data Management and Programming in SAS for Public Health: Read Less [-]
PB HLTH C271G Health Implications of Climate Change 3 Units
The course will provide a basic foundation in the physical mechanisms of, responses to, and health implications of climate change. We will explore the variety of epidemiologic, risk assessment, and statistical methods used to understand the impacts of climate change on health across diverse demographic groups. The public health implications, positive and negative, of efforts to mitigate and adapt to climate change will be elaborated, including discussions of ethical, political, and economic aspects of these efforts. Students will be responsible for leading class discussions and presenting a poster on their choice of a topic related to climate change and health.

Rules & Requirements

Prerequisites: The material will be presented with minimal expectation of a background in physical science, although some additional reading may be needed for students with no university science courses. A background in epidemiology is also helpful, but not necessary

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture per week

Introduction to Geographic Information Systems for Public Health: Read More [+]

PB HLTH W272A Introduction to Geographic Information Systems for Public Health 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course introduces geographic information systems (GIS) for the processing, visualization and description of spatial public health data. We will introduce principles, methods, and techniques for acquiring, processing, and manipulating spatial data. We will cover basic GIS concepts, such as coordinate systems and cartography, layering, buffering, joining spatial data, and conducting spatial queries. The role of locational information in aiding in the prevention of disease will be covered and discussed.

Hours & Format

Fall and/or spring: 8 weeks - 6 hours of web-based lecture per week

Online: This is an online course.

Additional Details

Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructors: Casey, Midekisa

Introduction to Geographic Information Systems for Public Health: Read Less [-]

Health Implications of Climate Change: Read Less [-]
PB HLTH W272C Applied Spatial Data Science for Public Health 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
This course will cover the theory and methods behind the analysis of patterns of health and disease in space. Students will increase their proficiency in the application of Geographic Information Systems (GIS) to public health data, and will learn how to perform a wide variety of space and space-time analyses. The course will introduce statistical techniques for describing, analyzing and interpreting layers of mapped health data, including the acquisition and classification of remote sensing data.

Course Objectives:
- Apply appropriate spatial statistics to diverse locational data;
- Describe several statistical techniques useful for analyzing and interpreting mapped data in public health applications;
- Describe the rationale for geographical analysis and spatial epidemiology;
- Formulate a research question that is answerable using spatial techniques;
- Identify strengths and weaknesses of mapped data and spatial analyses;
- Provide examples of impactful spatial analyses from the literature;
- Report results of spatial analyses in a manner that is clear and understandable to both technical and non-technical audiences.

Rules & Requirements

Prerequisites: Completion of PBHLTH W272A or permission of instructor is required to enroll in this course. Furthermore, this course requires extensive use of R. At least 50 hours of experience programming in R is strongly recommended. Similarly, this course will cover spatial regression analysis. As such, students are expected to be familiar with general linear regression.

Hours & Format

Fall and/or spring: 8 weeks - 6 hours of lecture per week

Online: This is an online course.

PB HLTH 273 Environmental Determinants of Infectious Disease 3 Units
Terms offered: Fall 2023, Fall 2020, Fall 2019
The course takes a global perspective, examining the environmental phenomena that influence the transmission of infectious diseases. The epidemiological significance of environmental processes are explored, including weather, climate extremes, hydrology, development projects, and land usage change. Analytical tools are discussed and critiqued with respect to their ability to resolve the role of environmental factors in shaping disease distributions and pathogen fate, transport, and persistence.

Course Objectives:
- Describe several statistical techniques useful for analyzing and interpreting mapped data in public health applications;
- Describe the rationale for geographical analysis and spatial epidemiology;
- Formulate a research question that is answerable using spatial techniques;
- Identify strengths and weaknesses of mapped data and spatial analyses;
- Provide examples of impactful spatial analyses from the literature;
- Report results of spatial analyses in a manner that is clear and understandable to both technical and non-technical audiences.

Rules & Requirements

PB HLTH 275 Current Topics in Vaccinology 2 Units
Terms offered: Spring 2018, Spring 2016, Spring 2014
This is an advanced level course designed to cover current issues related to the biological and analytical aspects of vaccine development and utilization. Latest developments in recombinant vaccine technology, vaccine delivery systems, “naked DNA” vaccines, “designer” vaccines, new adjuvants, anti-tumor vaccines, epidemiological approaches to assess vaccine efficacy, effectiveness, and safety will be discussed and covered.

Course Objectives:
- Describe several statistical techniques useful for analyzing and interpreting mapped data in public health applications;
- Describe the rationale for geographical analysis and spatial epidemiology;
- Formulate a research question that is answerable using spatial techniques;
- Identify strengths and weaknesses of mapped data and spatial analyses;
- Provide examples of impactful spatial analyses from the literature;
- Report results of spatial analyses in a manner that is clear and understandable to both technical and non-technical audiences.

Rules & Requirements

Optional Details

Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Riley, Enanoria
PB HLTH 277A GIS and Spatial Analysis for Health Equity 3 Units
Terms offered: Spring 2024, Spring 2023
The goal of this course is to acquire the knowledge and skills needed to approach public health problems from an equity or health justice perspective. Students will acquire mapping and spatial analysis (spatial epidemiology) skills and apply them in the context of structural inequity, health disparities, and racial justice. Geospatial skills are applied to public health problems that demonstrate differences in health exposures, risks, and adverse outcomes for BIPOC or economically disadvantaged individuals living in the US as well as those in low and medium income countries as compared to high income countries.
GIS and Spatial Analysis for Health Equity: Read More [+]

Objectives & Outcomes
Course Objectives: Communicate information related to an important health issues including their geographic and demographic contexts.
# How: Use the ESRI StoryMap Builder to incorporate short narratives, maps, infographics, and images into a web-based interactive communication tool.
Demonstrate the ability to design, implement, and apply spatial data to determine and display relative prevalence of diseases.
# How: Create maps and perform kernel density and cluster/hot spot analysis for a specific disease.
# How: Create a dashboard to illustrate the location and incidence of disease cases.
Illustrate how maps were used to contribute to structural racism by relating historic redlining maps to current health inequities.
# How: Create a social vulnerability index from demographic and health indicators, and map the index by county.
# How: Compare a current map that illustrates social vulnerabilities to historic redlining maps from the Federal Housing Administration.
Illustrate the limitations of political boundaries (census areas, cities, counties), in predicting disease prevalence, and equity issues associated with health risks.
# How: Use appropriate classification schema to overcome the “Modifiable Areal Unit Problem.”
Predict concentrations of an environmental contaminant where data are missing.
# How: Use Kriging to interpolate values in an area that has some missing data.
Report survey data cartographically.
# How: Develop and execute a geo-enabled survey on a public health issue.
# How: Create an interactive map of survey results.

Rules & Requirements
Credit Restrictions: Students will receive no credit for PB HLTH 277A after completing PB HLTH 177A. A deficient grade in PB HLTH 277A may be removed by taking PB HLTH 177A.

Hours & Format
Fall and/or spring: 15 weeks - 1.5 hours of lecture and 3 hours of laboratory per week.

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Smith

PB HLTH 278 Health Policymaking and 4+1 Competency Development 2 Units
Terms offered: Fall 2023, Fall 2022
This course will provide 4+1 MPH students with a “homeroom,” a space to grow as a cohort, meet outstanding competencies, and be introduced to the internship process. The lion share of competencies addressed will be in Advocacy and Policymaking.
Health Policymaking and 4+1 Competency Development: Read More [+]

Objectives & Outcomes
Course Objectives: 1. Compare the organization, structure and function of health care, public health, and regulatory systems across national and international settings.
2. Explain basic principles and tools of budget and resource management.
3. Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence.
4. Evaluate policies for their impact on public health and health equity.
5. Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes.
6. Advocate for political, social, or economic policies and programs that will improve health in diverse populations.
7. Communicate audience-appropriate public health content, both in writing and through oral presentation.
8. Apply systems thinking tools to a public health issue.

Rules & Requirements
Prerequisites: 4+1 Student in first semester of program

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of seminar per week.

Additional Details
Subject/Course Level: Public Health/Graduate
Grading: Letter grade.
Instructor: Flagg

Health Policymaking and 4+1 Competency Development: Read Less [-]
PB HLTH 281 Public Health and Spirituality 2 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course presents a brief introduction to the emerging field of spirituality and health. We examine scholarly and scientific views of links between spirituality, religion, and health. Topics include highlights and overviews of the rapidly emerging scientific evidence base, public health relevance, collaborations with faith-based organizations, and other practical applications.
Public Health and Spirituality: Read More [+]

PB HLTH 285A Public Health Injury Prevention and Control 2 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
Injuries are a major and often neglected health problem with substantial human and economic costs. Injuries are the leading cause of death from the first year of life to age 45, and the leading cause of lost potential years of life. This course provides an historical and conceptual framework within which to consider injuries (both intentional and unintentional) as social, and public health problems. Through review of epidemiology and intervention studies, course work will consider the causes and consequences of traumatic injury within developmental, social and economic contexts. Particular emphasis is placed on alternative strategies for injury prevention and on the relative benefits of intervention at different levels.
Public Health Injury Prevention and Control: Read More [+]

Rules & Requirements
Prerequisites: Consent of instructor

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

PB HLTH C285 Traffic Safety and Injury Control 3 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course applies principles of engineering, behavioral science, and vision science to preventing traffic collisions and subsequent injury. A systematic approach to traffic safety will be presented in the course, and will include (1) human behavior, vehicle design, and roadway design as interacting approaches to preventing traffic crashes and (2) vehicle and roadway designs as approaches to preventing injury once a collision has occurred. Implications of intelligent transportation system concepts for traffic safety will be discussed throughout the course.

PB HLTH 291A Preparation for Public Health Practice 2 Units
Terms offered: Spring 2023, Fall 2022, Spring 2022
Series of skills-based workshops and sessions to introduce students to specialized leadership competencies needed in the public health workplace. These workshops complement the School of Public Health’s (SPH) core curriculum and are selected based on the Council on Linkages between Academia and Public Health Practice, and regular feedback from public health practitioners, faculty and students. Workshop facilitators include UC Berkeley faculty, public health practitioners and consultants with expertise in the topic areas. Designed to teach the core public health skills relevant to pre-internship preparation and prepare students for professional success. Cases draw on past scenarios/challenges experienced in the PH field.
