Environmental Engineering Science

Bachelor of Science (BS)
The environmental engineering science (EES) major is an interdisciplinary program pairing engineering fundamentals with courses in the environmental and natural sciences. The EES curriculum provides a broader foundation in the sciences, allowing students to take classes in a variety of departments both inside and outside of the College of Engineering. At the same time, it allows students to focus their studies on environmental issues more than is possible in other engineering programs. EES provides a solid interdisciplinary foundation that is necessary for creating real-world solutions to global environmental challenges, such as providing a robust supply of safe drinking water, and meeting societal demands for energy without causing air pollution or interfering with the Earth's climate systems.

Admission to the Major
Prospective undergraduates of the College of Engineering must apply for admission to one specific major/degree program. For further information, please see the College of Engineering's website (http://coe.berkeley.edu/students/prospective-students/admissions.html).

Admission to engineering via a Change of College application for current UC Berkeley students is very competitive as there are few spaces open in engineering each year to students admitted to other colleges at UC Berkeley. For further information regarding a Change of College to Engineering, please see the College's website (http://coe.berkeley.edu/students/current-undergraduates/change-of-college/).

Minor Program
A minor in environmental engineering is available through the Department of Civil and Environmental Engineering.

Other Majors offered by the Engineering Science Program
Energy Engineering (http://guide.berkeley.edu/undergraduate/degree-programs/energy-engineering/) (Major and Minor)
Engineering Mathematics and Statistics (http://guide.berkeley.edu/undergraduate/degree-programs/engineering-math-statistics/) (Major only)
Engineering Physics (http://guide.berkeley.edu/undergraduate/degree-programs/engineering-physics/) (Major only)

In addition to the University, campus, and college requirements, students must fulfill the below requirements specific to their major program.

General Guidelines
1. All technical courses taken in satisfaction of major requirements must be taken for a letter grade.
2. No more than one upper division course may be used to simultaneously fulfill requirements for a student’s major and minor programs.
3. A minimum overall grade point average (GPA) of 2.0 is required for all work undertaken at UC Berkeley.
4. A minimum GPA of 2.0 is required for all technical courses taken in satisfaction of major requirements.

For information regarding residence requirements and unit requirements, please see the College Requirements tab.

For a detailed plan of study by year and semester, please see the Plan of Study tab.

must be satisfied. See the humanities and social sciences (https://engineering.berkeley.edu/students/undergraduate-guide/degree-requirements/humanities-and-social-sciences/) section of our website for details.

### Class Schedule Requirements

- Minimum units per semester: 12.0
- Maximum units per semester: 20.5
- Minimum technical courses: College of Engineering undergraduates must include at least two letter graded technical courses (of at least 3 units each) in their semester program. Every semester students are expected to make satisfactory progress in their declared major. Satisfactory progress is determined by the student's Engineering Student Services Advisor. (Note: For most majors, normal progress (https://engineering.berkeley.edu/academics/undergraduate-guide/policies-procedures/scholarship-progress/#ac12282) will require enrolling in 3-4 technical courses required of your current major each semester.) Students who are not in compliance with this policy by the end of the fifth week of the semester are subject to a registration block that will delay enrollment for the following semester.
- All technical courses (math, science, engineering) that satisfy requirements for the major must be taken on a letter-graded basis (unless only offered as P/NP).

### Minimum Academic Requirements

- Students must have a minimum overall and semester grade point average of 2.00 (C average). Students will be subject to dismissal from the University if during any fall or spring semester their overall UC GPA falls below a 2.00, or their semester GPA is less than 2.00.
- Students must achieve a minimum grade point average of 2.00 (C average) in upper division technical courses required for the major curriculum each semester.
- A minimum overall grade point average of 2.00 and a minimum 2.00 grade point average in upper division technical course work required for the major are required to earn a Bachelor of Science in the College of Engineering.
- Students must make normal degree progress toward the Bachelor of Science degree and their officially declared major.

### Unit Requirements

To earn a Bachelor of Science in Engineering, students must complete at least 120 semester units of courses subject to certain guidelines:

- Completion of the requirements of one engineering major program (https://engineering.berkeley.edu/students/undergraduate-guide/degree-requirements/major-programs/) of study.
- A minimum overall grade point average of 2.00 (C average) and a minimum 2.00 grade point average in upper division technical coursework required of the major.
- The final 30 units and two semesters must be completed in residence in the College of Engineering on the Berkeley campus.
- All technical courses (math, science, and engineering) that can fulfill requirements for the student's major must be taken on a letter graded basis (unless they are only offered P/NP).
- Entering freshmen are allowed a maximum of eight semesters to complete their degree requirements. Entering junior transfers are allowed five semesters to complete their degree requirements. Summer terms are optional and do not count toward the maximum. Students are responsible for planning and satisfactorily completing all graduation requirements within the maximum allowable semesters.
- Adhere to all college policies and procedures (https://engineering.berkeley.edu/students/undergraduate-guide/policies-procedures/) as they complete degree requirements.
- Complete lower division technical courses before enrolling in upper division technical courses.

### Humanities and Social Sciences (H/SS) Requirement

To promote a rich and varied educational experience outside of the technical requirements for each major, the College of Engineering has a six-course Humanities and Social Sciences breadth requirement (http://engineering.berkeley.edu/student-services/degree-requirements/humanities-and-social-sciences/), which must be completed to graduate. This requirement, built into all the engineering programs of study, includes two Reading and Composition courses (R&C), and four additional courses within which a number of specific conditions are met. See the humanities and social sciences (https://engineering.berkeley.edu/students/undergraduate-guide/degree-requirements/humanities-and-social-sciences/) section of our website for details.
campuses, credit-bearing exams, as well as UC Berkeley Extension XB units.

**Normal Progress**

Students in the College of Engineering must enroll in a full-time program and make normal progress (https://engineering.berkeley.edu/students/undergraduate-guide/policies-procedures/scholarship-progress/#ac12282) each semester toward their declared major. Students who fail to achieve normal academic progress shall be subject to dismissal. (Note: Students with official accommodations established by the Disabled Students' Program, with health or family issues, or with other reasons deemed appropriate by the dean may petition for an exception to normal progress rules.)

**University of California Requirements**

Entry Level Writing (http://guide.berkeley.edu/undergraduate/education/#earningyourdegreetext)

All students who will enter the University of California as freshmen must demonstrate their command of the English language by satisfying the Entry Level Writing Requirement (ELWR). The UC Entry Level Writing Requirement website (https://admission.universityofcalifornia.edu/elwr/) provides information on how to satisfy the requirement.

American History and American Institutions (http://guide.berkeley.edu/undergraduate/education/#earningyourdegreetext)

The American History and Institutions (AH&I) requirements are based on the principle that a US resident graduated from an American university should have an understanding of the history and governmental institutions of the United States.

**Campus Requirement**

American Cultures (http://guide.berkeley.edu/undergraduate/education/#earningyourdegreetext)

The American Cultures requirement is a Berkeley campus requirement, one that all undergraduate students at Berkeley need to pass in order to graduate. You satisfy the requirement by passing, with a grade not lower than C- or P, an American Cultures course. You may take an American Cultures course any time during your undergraduate career at Berkeley. You must take at least two American Cultures courses, with at least one that all undergraduate students at Berkeley need to pass in order to graduate.

The requirement was instituted in 1991 to introduce students to the diverse cultures of the United States through a comparative framework. Courses are offered in more than fifty departments in many different fields.

For more detailed information regarding the courses listed below (e.g., elective information, GPA requirements, etc.), please see the College Requirements and Major Requirements tabs.

---

1. CHEM 4A is intended for students majoring in chemistry or a closely-related field.
2. Select three basic science electives from: BIOLOGY 1A plus BIOLOGY 1AL, BIOLOGY 1B, CHEM 1B, CHEM 3A plus CHEM 3AL, CHEM 3B plus CHEM 3BL, CHEM 4B, EPS 50, PHYSICS 7C. Note: approved scores on Biology AP, IB, or A-Level exams can satisfy two of the three basic science electives.
3. Select one from the following: ENGIN 117, ENGIN 177, MATH 104, MATH 110, MATH 126, MATH 128A, MATH 170, MATH 185, STAT 133, or STAT 134.
4. Cluster courses: 12 units required. See Major Requirements tab for list of approved cluster courses.
5. Advanced science sequence: 8-10 units required. See Major Requirements tab for list of approved advanced science sequence courses.
6. Junior transfer admits are exempt from completing CIV ENG 11.
7. The Humanities/Social Sciences (H/SS) requirement includes two Cluster courses: 12 units required. See Major Requirements tab for list of approved cluster courses.
See engineering.berkeley.edu/hsa (https://engineering.berkeley.edu/academics/undergraduate-guide/degree-requirements/humanities-and-social-sciences/) for complete details and a list of approved courses.

Major Maps help undergraduate students discover academic, co-curricular, and discovery opportunities at UC Berkeley based on intended major or field of interest. Developed by the Division of Undergraduate Education in collaboration with academic departments, these experience maps will help you:

- **Explore** your major and gain a better understanding of your field of study
- **Connect** with people and programs that inspire and sustain your creativity, drive, curiosity and success
- **Discover** opportunities for independent inquiry, enterprise, and creative expression
- **Engage** locally and globally to broaden your perspectives and change the world
- **Reflect** on your academic career and prepare for life after Berkeley

Use the major map below as a guide to planning your undergraduate journey and designing your own unique Berkeley experience.

View the Environmental Engineering Science Major Map PDF. (https://vcue.berkeley.edu/sites/default/files/engineering_science.pdf)

**ENGIN 1 Engineering Your Life: Skills for Leadership, Discovery and Service 1 Unit**

Terms offered: Spring 2024, Spring 2023, Spring 2022

This course provides the framework for engineering an empowered life through leadership, discovery and service. The class focuses on development of self, emotional intelligence, strategic thinking, problem solving, teamwork, diversity, and service learning. Skills include developing of self-awareness; understanding our unique strengths; debunking the imposter syndrome; creating plans of action and setting goals; giving and receiving assessments; interpreting body language; managing time and life-balance; and creating mission statements. Teamwork skills include methods for inspiring others; variations in leadership styles and team dynamics; rhythm of action for projects and teams; difficult conversations and conflict resolution; mechanisms. Engineering Your Life: Skills for Leadership, Discovery and Service: Read More [+] Objectives & Outcomes

**Course Objectives:** This course offers the requisite framework for engineering an empowered life. The course provides students with requisite skills for authentic leadership, self-discovery and societal service. These attributes are in alignment with the mission of the College of Engineering and the Berkeley campus.

**Student Learning Outcomes:** Students will learn how to assess personal strengths, implement plans of action and develop mission statements. Students will learn how to optimize their knowledge with assessment of learning styles along with key communication tools necessary for conflict resolution and inspiration of others (teamwork). Through a series of active exercises and self-reflection activities the students will learn requisite skills for self-discovery and the creation of a personal leadership plan.

**Rules & Requirements**

**Prerequisites:** Designed for engineering freshmen, the class is open to all students in the College of Engineering or by permission of instructor

**Hours & Format**

Fall and/or spring: 15 weeks - 1 hour of lecture per week

**Additional Details**

**Subject/Course Level:** Engineering/Undergraduate

**Grading/Final exam status:** Offered for pass/not pass grade only. Alternative to final exam.

**Instructor:** Pruitt

**ENGIN 7 Introduction to Computer Programming for Scientists and Engineers 4 Units**

Terms offered: Spring 2024, Fall 2023, Summer 2023 10 Week Session

Elements of procedural and object-oriented programming. Induction, iteration, and recursion. Real functions and floating-point computations for engineering analysis. Introduction to data structures. Representative examples are drawn from mathematics, science, and engineering. The course uses the MATLAB programming language. Sponsoring departments: Civil and Environmental Engineering and Mechanical Engineering.

Introduction to Computer Programming for Scientists and Engineers: Read More [+]

**Rules & Requirements**

**Prerequisites:** MATH 1B (may be taken concurrently)

**Credit Restrictions:** Students will receive no credit for Engineering 7 after completing Engineering W7. A deficient grade in Engineering W7 may be repeated by taking Engineering 7.

**Hours & Format**

Fall and/or spring: 15 weeks - 2 hours of lecture, 1 hour of discussion, and 4 hours of laboratory per week

Summer: 10 weeks - 3 hours of lecture, 1.5 hours of discussion, and 6 hours of laboratory per week

**Additional Details**

**Subject/Course Level:** Engineering/Undergraduate

**Grading/Final exam status:** Letter grade. Final exam required.

**Formerly known as:** 77

Introduction to Computer Programming for Scientists and Engineers: Read Less [-]
ENGIN 11 A Hands-on Introduction to Radiation Detection: Getting to know our Radioactive World 3 Units
Terms offered: Spring 2024, Fall 2023, Spring 2023
Introduction to basic concepts in radiation detection and radioactivity, electrical circuits, and data analytics. Lectures provide the theoretical foundation of the work being performed in the accompanying laboratory. The course will contain three sections: introduction to how radiation interacts with matter and radiation detection technologies; development of the tools (mathematical and computational) needed for analyzing various types of radiation and environmental data; and building of a basic radiation sensor system.
A Hands-on Introduction to Radiation Detection: Getting to know our Radioactive World: Read More [+]

Objectives & Outcomes

Course Objectives: The course is suitable for Nuclear Engineering students, other Engineering majors, and any students interested in gaining a general understanding of radiation detection. The focus of this course will be on the application of the nuclear science, radiation detection, and data analysis concepts covered to the building of a multi-sensor radiation detection system, following a template for the required data acquisition software and circuit integration. Fieldwork related to a chosen research topic will be carried out in small groups, with group oral presentations and final reports. Students will be introduced to research opportunities on campus and at nearby lab facilities through tours of lab spaces throughout the department and field trips to LBNL and LLNL.

Students will be introduced to core concepts in nuclear science, statistical analysis, and computation, while being given practical experience applying those concepts to radiation detection and data analysis. The objective of this course is to provide Freshman and Sophomore students with an introduction to the fundamentals of nuclear radiation and radiation detection through a hands-on approach.

Student Learning Outcomes: Be able to outline and carry out a research project, prepare written and oral presentations of that work, and demonstrate how the sensors they built work. By the end of this course, students should be able to:
- Identify types of radioactivity, radiation detection methods and sources of environmental radiation,
- Create simple circuit designs making use of standard circuitry components, demonstrate basic soldering skills, and demonstrate a familiarity with printed circuit board design tools,
- Make use of software tools including the Python programming language, version control with git, and shell environments,
- Perform statistical analysis of large data sets and quantify statistical and systematic uncertainties in experimental data,

Rules & Requirements

Credit Restrictions: Students will receive no credit for ENGIN 11 after completing ENGIN 11. A deficient grade in ENGIN 11 may be removed by taking ENGIN 11.

Hours & Format

Fall and/or spring: 15 weeks - 1 hour of lecture and 3 hours of laboratory per week

Additional Details

Subject/Course Level: Engineering/Undergraduate

Grading/Final exam status: Letter grade. Alternative to final exam.

ENGIN 24 Freshman Seminar 1 Unit
Terms offered: Spring 2024, Fall 2023, Spring 2023
The Berkeley Seminar Program is designed to provide students with the opportunity to explore an intellectual topic with a faculty member in a small seminar setting. Berkeley Seminars are offered in all college departments, and topics vary from department to department and semester to semester.
Freshman Seminar: Read More [+]

Rules & Requirements

Repeat rules: Course may be repeated for credit when topic changes.

Hours & Format

Fall and/or spring: 15 weeks - 1 hour of lecture per week

Additional Details

Subject/Course Level: Engineering/Undergraduate

Grading/Final exam status: The grading option will be decided by the instructor when the class is offered. Final exam required.

Freshman Seminar: Read Less [-]
ENGIN 25 Visualization for Design 2 Units
Terms offered: Fall 2020, Spring 2020, Fall 2019
Development of 3-dimensional visualization skills for engineering design. Sketching as a tool for design communication. Presentation of 3-dimensional geometry with 2-dimensional engineering drawings. This course will introduce the use of 2-dimensional CAD on computer workstations as a major graphical analysis and design tool. A group design project is required. Teamwork and effective communication are emphasized.

Objectives & Outcomes

Course Objectives: Improve 3-dimensional visualization skills; enable a student to create and understand engineering drawings; introduce 2-dimensional computer-aided geometry modeling as a visualization, design, and analysis tool; enhance critical thinking and design skills; emphasize communication skills, both written and oral; develop teamwork skills; offer experience in hands-on engineering projects; develop early abilities in identifying, formulating, and solving engineering problems; introduce students to the societal context of engineering practice.

Student Learning Outcomes: Upon completion of the course, students shall be able to communicate 3-dimensional geometry effectively using sketches; operate 2-dimensional CAD software with a high degree of skill and confidence; understand and create engineering drawings; visualize 3-dimensional geometry from a series of 2-dimensional drawings.

Hours & Format

Fall and/or spring: 15 weeks - 1 hour of lecture and 2 hours of laboratory per week

Additional Details

Subject/Course Level: Engineering/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructors: Lieu, McMains

ENGIN 26 Three-Dimensional Modeling for Design 2 Units
Terms offered: Spring 2024, Fall 2023, Spring 2023
Three-dimensional modeling for engineering design. This course will emphasize the use of CAD on computer workstations as a major graphical analysis and design tool. Students develop design skills, and practice applying these skills. A group design project, design and fabrication (3D print) of the tower and rotor is required. Hands-on creativity, teamwork, and effective communication are emphasized.

Objectives & Outcomes

Course Objectives: Develop teamwork skills; offer experience in hands-on, creative engineering projects. Enhance critical thinking and design skills; emphasize communication skills, both written and oral. Introduce computer-based solid, parametric, and assembly modeling as a tool for engineering design. Reinforce the societal context of engineering practice; develop early abilities in identifying, formulating, and solving engineering problems.

Student Learning Outcomes: Create a 3D solid model of a complicated object with high degree of confidence. Extract 2D orthographic views from the 3D model for fabrication. Extract section and auxiliary views. Specify the proper dimensions, according to industry standards, for parts to be fabricated.

Understand the basics of assembly and associative constraints. Understand the basics of rapid prototyping, in particular 3D printing. Understand the engineering design process and the implementation of different design phases. Work effectively as a member of a design team.

Hours & Format

Fall and/or spring: 15 weeks - 1 hour of lecture and 2 hours of laboratory per week

Additional Details

Subject/Course Level: Engineering/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructors: Youssefi, McMains

Visualization for Design: Read More [+]
Objectives & Outcomes

Course Objectives: Improve 3-dimensional visualization skills; enable a student to create and understand engineering drawings; introduce 2-dimensional computer-aided geometry modeling as a visualization, design, and analysis tool; enhance critical thinking and design skills; emphasize communication skills, both written and oral; develop teamwork skills; offer experience in hands-on engineering projects; develop early abilities in identifying, formulating, and solving engineering problems; introduce students to the societal context of engineering practice.

Student Learning Outcomes: Upon completion of the course, students shall be able to communicate 3-dimensional geometry effectively using sketches; operate 2-dimensional CAD software with a high degree of skill and confidence; understand and create engineering drawings; visualize 3-dimensional geometry from a series of 2-dimensional drawings.

Hours & Format

Fall and/or spring: 15 weeks - 1 hour of lecture and 2 hours of laboratory per week

Additional Details

Subject/Course Level: Engineering/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructors: Lieu, McMains

Three-Dimensional Modeling for Design: Read Less [-]
ENGIN 27 Introduction to Manufacturing and Tolerancing 2 Units
Terms offered: Summer 2021 10 Week Session, Fall 2020, Summer 2020 10 Week Session
Geometric dimensioning and tolerancing (GD&T), tolerance analysis for fabrication, fundamentals of manufacturing processes (metal cutting, welding, joining, casting, molding, and layered manufacturing).
Introduction to Manufacturing and Tolerancing: Read More [+] 
Objectives & Outcomes
Course Objectives: Enable a student to create and understand tolerances in engineering drawings; enhance critical thinking and design skills; emphasize communication skills, both written and oral; offer hands-on experience in manufacturing; develop abilities in identifying, formulating, and solving engineering problems; introduce students to the context of engineering practice.

Student Learning Outcomes: Upon completion of the course, students shall be able to fabricate basic parts in the machine shop; understand and communicate tolerance requirements in engineering drawings using industry standard GD&T; use metrology tools to evaluate if physical parts are within specified tolerances; demonstrate familiarity with manufacturing processes; and design parts that can be fabricated realistically and economically using these processes.

Rules & Requirements
Prerequisites: ENGIN 25 (may be taken concurrently)

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of lecture and 2 hours of laboratory per week
Summer: 10 weeks - 1.5 hours of lecture and 3 hours of laboratory per week

Additional Details
Subject/Course Level: Engineering/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructors: McMains, Lieu, Taylor

Introduction to Manufacturing and Tolerancing: Read Less [-]

ENGIN 29 Manufacturing and Design Communication 4 Units
Terms offered: Spring 2024, Fall 2023, Summer 2023 10 Week Session
An introduction to manufacturing process technologies and the ways in which dimensional requirements for manufactured objects are precisely communicated, especially through graphical means. Fundamentals of cutting, casting, molding, additive manufacturing, and joining processes are introduced. Geometric dimensioning and tolerancing (GD&T), tolerance analysis for fabrication, concepts of process variability, and metrology techniques are introduced and practiced. 3-D visualization skills for engineering design are developed via sketching and presentation of 3-D geometries with 2-D engineering drawings. Computer-aided design software is used. Teamwork and effective communication are emphasized through lab activities and a design project.

Manufacturing and Design Communication: Read More [+] 
Objectives & Outcomes
Course Objectives: Develop early abilities in identifying, formulating, and solving engineering problems. Emphasize communication skills, both written and oral; develop teamwork skills. Enable a student to create and understand tolerances in engineering drawings. Enhance critical thinking and design skills. Improve 3-dimensional visualization skills; enable a student to create and understand engineering drawings. Introduce 2-dimensional computer-aided geometry modeling as a visualization, design, and analysis tool. Introduce students to the societal context of engineering practice. Offer an experience in hands-on engineering projects.

Student Learning Outcomes: A knowledge of contemporary issues. A recognition of the need for, and an ability to engage in life-long learning. An ability to apply knowledge of mathematics, science, and engineering. An ability to communicate effectively. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. An ability to design and conduct experiments, as well as to analyze and interpret data. An ability to identify, formulate, and solve engineering problems. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. An understanding of professional and ethical responsibility.

Rules & Requirements
Prerequisites: ENGIN 26 or equivalent experience in three-dimensional solid modeling (e.g. Solidworks, Fusion 360) is recommended

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 3 hours of laboratory per week
Summer: 10 weeks - 4.5 hours of lecture and 4.5 hours of laboratory per week

Additional Details
Subject/Course Level: Engineering/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Instructors: Taylor, Hayden, McMains, Sarah, Stuart, Hannah
ENGIN 39B Freshman/Sophomore Seminar
1.5 - 4 Units
Terms offered: Spring 2010, Spring 2009, Spring 2008
Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester. Enrollment limits are set by the faculty, but the suggested limit is 25.
Freshman/Sophomore Seminar: Read More [+]

Rules & Requirements
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1.5-4 hours of seminar per week

Additional Details
Subject/Course Level: Engineering/Undergraduate

Grading/Final exam status: The grading option will be decided by the instructor when the class is offered. Final exam required.

ENGIN 147 Supplementary Work in Upper Division Engineering 1 - 3 Units
Terms offered: Fall 2016, Fall 2015, Spring 2015
May be taken only with permission of the Dean of the College of Engineering. Students with partial credit in an upper division engineering course may complete the work under this heading.

Rules & Requirements
Prerequisites: Limited to students who must make up a fraction of a required upper division course
Repeat rules: Course may be repeated for credit without restriction.

ENGIN 150 Basic Modeling and Simulation Tools for Industrial Research Applications 4 Units
Terms offered: Fall 2021, Fall 2019, Fall 1997
The course emphasizes elementary modeling, numerical methods & their implementation on physical problems motivated by phenomena that students are likely to encounter in their careers, involving biomechanics, heat-transfer, structural analysis, control theory, fluid-flow, electrical conduction, diffusion, etc. This will help students develop intuition about the strengths and weaknesses of a variety of modeling & numerical methods, as well as develop intuition about modeling physical systems & strengths and weaknesses of a variety of numerical methods, including: Discretization of differential equations, Methods for solving nonlinear systems, Gradient-based methods and machine learning algorithms for optimization, stats & quantification

Rules & Requirements
Prerequisites: ENGIN 7, COMPSCI 61A, or DATA C8 + COMPSCI 88; and PHYSICS 7A; and MATH 53 AND MATH 54

ENGIN 151 Modeling and Simulation of Infectious Diseases 3 Units
Terms offered: Prior to 2007
The course emphasizes elementary modeling, numerical methods and their implementation on physical problems motivated by real-world phenomena involving various aspects of infection diseases. This course is broken into five parts: part 1-modeling and simulation of the infection zone from respiratory emission, part 2-rapid simulation of viral decontamination efficacy with uv irradiation, part 3-an agent-based computational framework for simulation of global pandemic and social response, part 4-machine learning and parameter identification, part 5-deep dive into advanced models: continuum mechanics, solid-fluid interaction and electromagnetism.

Rules & Requirements
Prerequisites: ENGIN 7, COMPSCI 61A, or DATA C8 + COMPSCI 88; and PHYSICS 7A; and MATH 53 AND MATH 54

ENGIN 150 Basic Modeling and Simulation Tools for Industrial Research Applications 4 Units

ENGIN 157AC Engineering, The Environment, and Society 4 Units
Terms offered: Spring 2024, Spring 2023, Spring 2022
This course engages students at the intersection of environmental justice, social justice, and engineering to explore how problems that are commonly defined in technical terms are at their roots deeply socially embedded. Through partnerships with community-based organizations, students are trained to recognize the socio-political nature of technical problems so that they may approach solutions in ways that prioritize social justice. Topics covered include environmental engineering as it relates to air, water, and soil contamination; race, class, and privilege; expertise; ethics; and engaged citizenship. This course cannot be used to complete any engineering technical unit requirements.

ENGIN 177 Advanced Programming with MATLAB 3 Units
Terms offered: Spring 2017, Spring 2015, Spring 2014
The course builds an understanding, demonstrates engineering uses, and provides hand-on experience for object-oriented programming as well as exposes a practical knowledge of advanced features available in MATLAB. The course will begin with a brief review of basic MATLAB features and quickly move to class organization and functionality. The introduced concepts are reinforced by examining the advanced graphical features of MATLAB. The material will also include the effective use of programs written in C and FORTRAN, and will cover SIMULINK, a MATLAB toolbox providing for an effective ways of model simulations. Throughout the course, the emphasis will be placed on examples and homework assignments from engineering disciplines.

ENGIN 178 Statistics and Data Science for Engineers 4 Units
Terms offered: Spring 2024, Fall 2023, Spring 2023
This course provides a foundation in data science with emphasis on the application of statistics and machine learning to engineering problems. The course combines theoretical topics in probability and statistical inference with practical methods for solving problems in code. Each topic is demonstrated with examples from engineering. These include hypothesis testing, principal component analysis, clustering, linear regression, time series analysis, classification, and deep learning. Math 53 and 54 are recommended before Engin 178, Math 53 and 54 are allowed concurrently.

Objectives & Outcomes
Course Objectives: To demonstrate the use of data science in engineering tasks.
To enable students to import, clean, visualize, and interpret data sets using modern computer languages.
To familiarize students with a range of techniques for building models from data.
To introduce the concepts of quantitative statistics and probability.
To provide a theoretical and conceptual basis for students to understand the role of data in engineering.
To teach students how to build and train machine learning models.

Student Learning Outcomes: A knowledge of contemporary issues.
An ability to apply knowledge of mathematics, science, and engineering.
An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
An ability to design and conduct experiments, as well as to analyze and interpret data.
An ability to identify, formulate, and solve engineering problems.
An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Rules & Requirements
Prerequisites: ENG 7, MATH 1A, MATH 1B MATH 53, and MATH 54 (may be taken concurrently)

Credit Restrictions: Students will receive no credit for ENGIN 178 after completing ENGIN 78. A deficient grade in ENGIN 178 may be removed by taking ENGIN 78.

Advanced Programming with MATLAB: Read Less [-]

ENGIN 180 Preparing for the Fields and Jobs of the Future 3 Units
Terms offered: Spring 2018
The course is concerned with giving students the tools to prepare for the fields and jobs of the future. Across all university departments and majors, the numbers of students who do not work in the fields in which they’ve received their degrees is not only significant, but growing. For example, anywhere from 20-40% of STEM graduates do not work in the fields in which they received their degrees.
This does not mean that students shouldn’t major in STEM, but that one of the primary purposes of higher education is learning how to learn. Accordingly, this course presents a number of frameworks that are critical for thinking about that which has not yet been invented.
Preparing for the Fields and Jobs of the Future: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Additional Details
Subject/Course Level: Engineering/Undergraduate
Grading/Final exam status: Letter grade. Alternate method of final assessment during regularly scheduled final exam group (e.g., presentation, final project, etc.).

Grading/Final exam status: Letter grade. Final exam required.
Formerly known as: Industrial Engin and Oper Research 195

A. Richard Newton Lecture Series 1 Unit
Terms offered: Spring 2024, Fall 2023, Spring 2023
This lecture series serves as an entry point for undergraduate and graduate curriculum sequences in entrepreneurship and innovation. The series, established in 2005, is named in honor of A. Richard Newton, a visionary technology industry leader and late dean of the University of California Berkeley College of Engineering. The course features a selection of high-level industry speakers who share their insights on industry developments, leadership, and innovation based on their careers.
A. Richard Newton Lecture Series: Read More [+]

Rules & Requirements

Hours & Format
Fall and/or spring: 15 weeks - 1.5 hours of colloquium per week

Additional Details
Subject/Course Level: Engineering/Undergraduate
Grading/Final exam status: Offered for pass/not pass grade only. Alternative to final exam.
Formerly known as: Industrial Engin and Oper Research 195
ENGIN 183B Berkeley Method of Entrepreneurship Bootcamp 2 Units
Terms offered: Spring 2024, Fall 2023, Summer 2023 Second 6 Week Session
This course offers the opportunity to understand the Berkeley Method of Entrepreneurship (BME) in an intensive format. The BME curriculum conveys the latest approaches for training global technology entrepreneurs. This method leverages insights on strategy, tactics, culture, and psychology with an accompanying entrepreneurial infrastructure. The curriculum is structured to provide an optimal global entrepreneurship experience from real life experiences.

ENGIN 183C Challenge Lab 4 Units
Terms offered: Spring 2024, Fall 2023, Summer 2023 Second 6 Week Session
This course is meant for students in engineering and other disciplines who seek a challenging, interactive, team-based, and hands-on learning experience in entrepreneurship and technology. In this highly experiential course, students work in simulated start-up teams to create products or start-up ideas to address a broadly-defined need of an industry partner or social challenge.

Objectives & Outcomes

ENGIN 183B Berkeley Method of Entrepreneurship Bootcamp: Read More [+]

Objectives:

1) To understand and make use of the value of diversity in idea generation and new venture creation.
2) To understand the mindset and behaviour required for entrepreneurship and be able to reinforce some of these behaviours (eg rejection tolerance, comfort with failing or being wrong, inductive learning, venture story telling/communication abilities) through exercises in the program.

Student Learning Outcomes:

1) Students should be able to consider a greater number of ideas for global entrepreneurship by observing the effect of background diversity in the class.
2) Students should be able to follow a process of idea generation, rapid prototyping / venture story development, attraction of stakeholders, data collection, and hypothesis testing and regeneration.
3) Students should become aware of the mindset and behaviour required for entrepreneurship and how this can create better outcomes.
4) Students should model some of these behaviours (eg rejection tolerance, comfort with failing or being wrong, inductive learning, venture story telling/communication abilities) through exercises in the program.

Rules & Requirements

Repeat rules: Course may be repeated for credit with instructor consent.

Hours & Format

Fall and/or spring: 1 weeks - 30 hours of lecture and 20 hours of discussion per week
Summer: 1 weeks - 30 hours of lecture and 20 hours of discussion per week

Additional Details

Subject/Course Level: Engineering/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Formerly known as: Industrial Engin and Oper Research 192

ENGIN 183C Challenge Lab 4 Units

Objectives:

1) To catalyze learning through experiential entrepreneurship
2) To help students understand the entrepreneurial context, and how it can create better outcomes.
3) To help students identify the best role for themselves within an entrepreneurial organization.

Student Learning Outcomes:

1) Gain experience with effectively refining ideas and pivoting based on feedback and external factors.
2) Gain experience building effective teams to develop and execute an idea
3) Become comfortable with failure and how to learn from failure.
4) Become adept at succinctly communicating ideas in terms of value proposition and business viability.

Rules & Requirements

Repeat rules: Course may be repeated for credit when topic changes.

Hours & Format

Fall and/or spring: 15 weeks - 4 hours of seminar per week
Summer:
6 weeks - 10 hours of seminar per week
8 weeks - 7.5 hours of seminar per week
10 weeks - 6 hours of seminar per week

ENGIN 183D Product Management 3 Units
Terms offered: Spring 2024, Spring 2023, Fall 2022
Too often we are enamored in our brilliant ideas, we skip the most important part: building products consumers will want and use. Precious time and effort is wasted on engineering perfect products only to launch to no users. This course teaches product management skills such as attributes of great product managers, reducing risk and cost while accelerating time to market, product life cycle, stakeholder management and effective development processes.
Product Management: Read More [+]

Objectives & Outcomes

Course Objectives:
• Students will experience a live development of a product within the context of a product development process.
• Students will learn common methods used in product management
• Students will understand the difference between engineering design and product development as a process commonly used in new venture environments.

Student Learning Outcomes:
• Students will actually develop a real world functioning product, to be described as Minimum Viable.
• Students will be able to manage a product development process that leads to a product that is technically feasible as well as desired by customers.
• Students will gain experience needed to work as product managers in real life environments.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of seminar per week

Additional Details

Subject/Course Level: Engineering/Undergraduate

ENGIN 183E Technology Entrepreneurship 3 Units
Terms offered: Spring 2024, Fall 2023, Spring 2023
This course explores key entrepreneurial concepts relevant to the high-technology world. Topics include the entrepreneurial perspective, start-up strategies, business idea evaluation, business plan writing, introduction to entrepreneurial finance and venture capital, managing growth, and delivering innovative products. This course prepares technical and business minded students for careers focused on entrepreneurship, intrapreneurship, and high technology. Students undertake intensive study of actual business situations through rigorous case-study analysis.
This course can not be used to fulfill any engineering requirement (engineering units, courses, technical electives, or otherwise).
Technology Entrepreneurship: Read More [+]

Rules & Requirements

Prerequisites: Junior or senior standing

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week

Technology Entrepreneurship: Read Less [-]
ENGIN 184 Writing Robots 3 Units
Terms offered: Spring 2024
This writing-intensive course surveys and analyzes accounts of AI-generated writing, while reflecting on the ramifications of AI for human writing practices. In other words: how do we write about—as well as with—writing machines? How are emergent AI writing technologies reshaping human writing cultures in STEM fields and beyond? How, in turn, do accounts of and interactions with writing machines shape cultural conceptions of human writers and thinkers, as well as technological frontiers for AI developers? What does it mean to write for someone else, or to let someone or something else write for us? How do preoccupations fundamental to all writing—audience, context, aims, and aesthetics—shape both non-human and human writing?

Objectives & Outcomes

Course Objectives: To address these questions, we will analyze a broad range of texts framing these questions, including chat transcripts, essays, and journal articles, alongside novels, plays, and podcasts. Students will track and research a sub-topic of their choosing through a cumulative series of summaries, essays, and opinion pieces, while chronicling their developing writerly identities by reflecting on readings and assignments in a course journal. At semester's end, they will revise and present a writing portfolio reflecting their strongest work.

Student Learning Outcomes: By the end of this course, students will be able to
1) Analyze how technological developments are communicated to different audiences
2) Identify, reframe, and synthesize explanations of a particular technology.
3) Support arguments about technology and science-related topics using those identified and synthesized elements
4) Develop and articulate a set of writerly practices, preferences, and beliefs in relation to automatic writing.

Rules & Requirements

Prerequisites: Reading and Composition R1A and R1B

ENGIN 185 The Art of STEM Communication 3 Units
Terms offered: Summer 2023 First 6 Week Session, Spring 2023, Spring 2022
This course provides engineering majors with the fundamental skills for effective technical communication. During the course of the semester, students will develop communications for public dissemination, covering a project or initiative within UC Berkeley’s College of Engineering. This work will call on students to: (a) cultivate interest in a broad range of topics related to Engineering; (b) become an engaged and critical reader of academic and general-interest science publications; (c) learn how to assess, plan for, and respond to a variety of communicative situations; (d) produce focused, and at the same time, narratively-rich, accounts of Engineering research.

Objectives & Outcomes

Course Objectives: To address these questions, we will analyze a broad range of texts framing these questions, including chat transcripts, essays, and journal articles, alongside novels, plays, and podcasts. Students will track and research a sub-topic of their choosing through a cumulative series of summaries, essays, and opinion pieces, while chronicling their developing writerly identities by reflecting on readings and assignments in a course journal. At semester's end, they will revise and present a writing portfolio reflecting their strongest work.

Student Learning Outcomes: By the end of this course, students will be able to
1) Analyze how technological developments are communicated to different audiences
2) Identify, reframe, and synthesize explanations of a particular technology.
3) Support arguments about technology and science-related topics using those identified and synthesized elements
4) Develop and articulate a set of writerly practices, preferences, and beliefs in relation to automatic writing.

Rules & Requirements

Prerequisites: Reading and Composition R1A and R1B

ENGIN 187 Global Engineering: The Challenges of Globalization and Disruptive Innovation 1 or 2 Units
Terms offered: Fall 2019
The course examines the challenges of innovation beyond new technology development: from the challenges of global expansion, to the issues of unintended consequences of technology and the ability of technology to support or hinder social justice. The course will provide examples in a variety of global locations (e.g., Latin America, Southeast Asia, Africa, China, and India), utilizing case examples (written and presented by speakers) that illustrate the challenges faced in a range of fields of engineering and technology, from water and transportation to information and communications technology, and from start-ups to major corporations, government entities, and policy makers.

Objectives & Outcomes

Course Objectives: To address these questions, we will analyze a broad range of texts framing these questions, including chat transcripts, essays, and journal articles, alongside novels, plays, and podcasts. Students will track and research a sub-topic of their choosing through a cumulative series of summaries, essays, and opinion pieces, while chronicling their developing writerly identities by reflecting on readings and assignments in a course journal. At semester's end, they will revise and present a writing portfolio reflecting their strongest work.

Student Learning Outcomes: By the end of this course, students will be able to
1) Analyze how technological developments are communicated to different audiences
2) Identify, reframe, and synthesize explanations of a particular technology.
3) Support arguments about technology and science-related topics using those identified and synthesized elements
4) Develop and articulate a set of writerly practices, preferences, and beliefs in relation to automatic writing.

Rules & Requirements

Prerequisites: Reading and Composition R1A and R1B

Repeat rules: Course may be repeated for credit when topic changes.

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of seminar per week

Additional Details

Subject/Course Level: Engineering/Undergraduate

Grading/Final exam status: Letter grade. Alternative to final exam in a manner consistent with course objectives.

**ENGIN 194 Undergraduate Research 3 Units**  
Terms offered: Spring 2024, Fall 2023, Spring 2023  
Students who have completed a satisfactory number of advanced courses may pursue original research under the direction of one of the members of the staff. Final report and presentation required.  
Undergraduate Research: Read More [+]  

**Rules & Requirements**  
Prerequisites: Consent of instructor and adviser, junior or senior standing  
Repeat rules: Course may be repeated for credit without restriction.  

**Hours & Format**  
Fall and/or spring: 15 weeks - 0 hours of independent study per week  

**Additional Details**  
Subject/Course Level: Engineering/Undergraduate  
Grading/Final exam status: Letter grade. Final exam required.  
Undergraduate Research: Read Less [-]

**ENGIN 195A Engineering Science Senior Thesis Research 1 - 3 Units**  
Terms offered: Fall 2023, Fall 2022  
Thesis work under the supervision of a faculty member. To obtain full credit, the student must submit a satisfactory thesis at the end of two semesters of research. A total of four units must be taken. The units must be distributed between the two semesters (2 units in E195A and 2 units in E195B, or 1+3 or 3+1). Note, completion of a senior thesis does not contribute toward graduation requirements.  
Engineering Science Senior Thesis Research: Read More [+]  

**Objectives & Outcomes**  
Course Objectives: Gain experience conducting an independent research project in science and/or engineering. Report research outcomes in a written thesis.  

Student Learning Outcomes: Develop familiarity reading scientific literature  
Gain expertise in a field closely related to their coursework  
Gain practice asking research questions and managing an independent project  
Learn how to communicate scientific ideas and methods in a research thesis  
Practice good teamwork with their fellow research students and their supervisor  

**Rules & Requirements**  
Prerequisites: Must be an Engineering Science student with senior standing, with one fall and one spring semester remaining, and an overall UC GPA of at least 3.3  

**Hours & Format**  
Fall and/or spring: 15 weeks - 3-9 hours of independent study per week  

**Additional Details**  
Subject/Course Level: Engineering/Undergraduate  
Grading/Final exam status: Offered for pass/not pass grade only. Final exam not required.  
Engineering Science Senior Thesis Research: Read Less [-]
ENGIN 195B Engineering Science Senior Thesis Research 1 - 3 Units
Terms offered: Spring 2024, Spring 2023
Thesis work under the supervision of a faculty member. To obtain full credit, the student must submit a satisfactory thesis at the end of two semesters of research. A total of four units must be taken. The units must be distributed between the two semesters (2 units in E195A and 2 units in E195B, or 1+3 or 3+1). Note, completion of a senior thesis does not contribute toward graduation requirements.

Objectives & Outcomes

Course Objectives: Gain experience conducting an independent research project in science and/or engineering.
Report research outcomes in a written thesis.

Student Learning Outcomes: Develop familiarity reading scientific literature
Gain expertise in a field closely related to their coursework
Gain practice asking research questions and managing an independent project

ENGIN 198 Directed Group Studies for Advanced Undergraduates 1 - 4 Units
Terms offered: Spring 2024, Fall 2023, Summer 2023 First 6 Week Session
Group study of selected topics.

Rules & Requirements

Prerequisites: Upper division standing, plus particular courses to be specified by instructor

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format

Fall and/or spring: 15 weeks - 1-4 hours of directed group study per week
Summer: 8 weeks - 1.5-7.5 hours of directed group study per week

Additional Details

Subject/Course Level: Engineering/Undergraduate

Grading/Final exam status: Offered for pass/not pass grade only. Final exam not required.
