Psychology

Bachelor of Arts (BA)

Psychology as a scientific discipline aims to describe, understand, and predict the behavior of living organisms. In doing so, psychology embraces the many factors that influence behavior — from sensory experience to complex cognition, from the role of genetics to that of social and cultural environments, from the processes that explain behavior in early childhood to those that operate in older ages, and from normal development to pathological conditions. The Psychology Department at UC Berkeley reflects the diversity of our discipline's mission covering six key areas of research: Behavioral and Systems Neuroscience; Clinical Science; Cognition; Cognitive Neuroscience; Developmental, and Social-Personality Psychology. Despite the existence of these specialization areas, the program learning goals focus on fostering methodological, statistical, and critical thinking skills that are not tied to any one particular content area in psychology but are relevant for all of them.

The major serves three purposes:

1. For the liberal arts student, the study of psychology provides an avenue for increased self-understanding and insight into the behavior of others. The objective study of behavior is one of the major themes of intellectual history in the last hundred-plus years.
2. For students preparing for training in such professions as medicine, law, education and business, psychology provides important basic knowledge and principles.
3. For students who plan on pursuing graduate work in psychology, the undergraduate major seeks to establish a sound foundation of research principles and knowledge of a variety of content areas.

Declaring the Major

Psychology is a high demand major at UC Berkeley. This means that due to high demand, the program, unfortunately, cannot accommodate every student who wishes to major in Psychology.

For Students Admitted to UC Berkeley Fall 2023 or thereafter:

Admission into the Psychology major will be guaranteed to those who selected Psychology as their primary major on their UC Berkeley admissions application. Students are guaranteed a spot in the Psychology major, subject to completing the major prerequisites, maintaining good academic standing in L&S, and filing a declaration form.

The opportunities for being admitted into the Psychology major after enrollment at UC Berkeley will be extremely limited, and applying to the Psychology major via the comprehensive review process does not guarantee a spot in the major. If you have an interest in the Psychology major, we strongly encourage you to select Psychology as your primary major during the UC application process. If you opt to change to the Psychology major after being admitted to Berkeley, you will be required to have an alternate plan to declare a non-high demand major as a back-up.

For more information on the high-demand major policy please visit the “Admissions” page for the College of Letters and Science on the Berkeley Academic Guide. (https://guide.berkeley.edu/undergraduate/colleges-schools/letters-science/#admissionstext)

Honors Program

Declared Psychology major students may earn Honors or Highest Honors in the department for completion of the Psychology Honors program. This requires submission of a thesis of high quality, based upon independent study under the supervision of a member of the Psychology Department's faculty, satisfactory completion of the required courses, and attaining the requisite GPAs at the time of graduation (3.5 in the Psychology major and 3.3 overall).

Students are required to complete the following courses, none of which count toward major requirements, with a letter grade:

- UGIS 192B or PSYCH 199 Students applying to the honors program must have experience as a research apprentice in a Psychology lab or in a related field. To demonstrate this preparation, students must have a minimum of 2 units of UGIS 192 or Psych 199 on their transcript prior to applying for the honors program. It is recommended that students begin as a research assistant in their sophomore or junior year.
- PSYCH 102 Statistics for Psychological Research is a 3 unit upper division course that is designed to introduce students to the data analysis techniques researchers use in the field of psychology. This course is only offered in fall and may be taken as early as the junior year.
- PSYCH H194A / PSYCH H194B Honors students are required to concurrently enroll in Psychology H194A-B (2 units per semester), the honors seminar, in their senior year. This course provides excellent supplemental background and support for preparing the thesis.
- PSYCH H195A / PSYCH H195B Psychology H195A-B is offered for 1-3 units per semester and is mandatory in order to receive honors in the major. The course is sequential with a grade of In Progress or “IP” for the “A” portion and the final grade assigned for both semesters at the end of the “B” portion.

Post-Baccalaureate Certificate Program

The UC Berkeley, Department of Psychology’s Post-Baccalaureate Certificate Program (https://psychology.berkeley.edu/post-bac/) is a comprehensive retraining and immersion program for students interested in applying to graduate school in psychology. The program features intensive coursework to complete a psychology undergraduate major in three or four semesters, research opportunities with our world-class faculty, in-depth advising and a supportive community. If you are inspired to enter the field of psychology, switching focus from a previous major, or changing careers, the UC Berkeley Post Bac program may be your path to success.

Minor Programs

There are two Summer Minor programs offered through Psychology, The Clinical & Counseling Psychology (https://psychology.berkeley.edu/students/undergraduate-program/minor-requirements/) summer minor allows students to explore the diverse career paths of clinical and counseling psychology. The Developing Child summer minor is offered in partnership with Early Development & Learning Science (ED&LS) at the Institute of Human Development (http://ihd.berkeley.edu/).

In addition to the University, campus, and college requirements, listed on the College Requirements tab, students must fulfill the below requirements specific to their major program.
General Guidelines

1. All courses taken to fulfill the major requirements below must be taken for graded credit. Please refer to our Major Requirements (https://psychology.berkeley.edu/students/undergraduate-program/major-requirements/) website for more information on our COVID-19 Pass/No Pass grading policies for classes taken during the remote learning period.

2. No more than one upper division course may be used to simultaneously fulfill requirements for a student's minor program.

3. No more than two upper division courses may be used to simultaneously fulfill the double major requirements or simultaneous degree programs.

4. A minimum grade point average (GPA) of 2.0 must be maintained in both upper and lower division courses used to fulfill the major requirements for the college and university requirements.

For information regarding residence requirements and unit requirements, please see the College Requirements tab.

**Please contact the Student Services offices or make an appointment with your Student Services advisor (https://psychology.berkeley.edu/students/undergraduate-program/academic-advising/) for any questions related to these requirements.**

Lower Division/Tier I Prerequisites

Students must complete prerequisite courses in the following areas: General Psychology, Biological Science, Social Science, and Quantitative Reasoning including the required PSYCH 101 course. ALL courses taken for the major (both lower division prerequisites and upper division requirements) must be taken for a letter grade.

*We require a minimum of four letter-graded courses to satisfy prerequisites. If you take more than one AP exam you may choose which one to use for the major prerequisites. The other requirements must be satisfied with letter-graded courses.

General Psychology

| AP Psychology with a test score of 4 or 5 | PSYCH 1 General Psychology [3] |

Biological Science

One course is required. (Lectures are required and Labs are optional)

| AP Biology with a score of 4 or 5 | ANTHRO 1 Introduction to Biological Anthropology [4] |
| | BIOLOGY 1A General Biology Lecture [3] |
| | INTEGBI 31 The Ecology and Evolution of Animal Behavior [3] |
| | MCELLBI 32 Introduction to Human Physiology [3] |
| | MCELLBI C61 Brain, Mind, and Behavior [3] |
| or PSYCH C61 Exploring the Brain: Introduction to Neuroscience | MCELLBI C64 |

Social Science

One course is required

| AP US Government or AP Comparative Government with a score of 4 or 5 | ANTHRO 3 Introduction to Social and Cultural Anthropology [4] |
| or ANTHRO 3A Introduction to Social/Cultural Anthropology (American Cultures) |

Quantitative

A total of 2 courses is required. Students must take Psych 101 and satisfy the quantitative course requirement.

| PSYCH 101 Research and Data Analysis in Psychology [4] |
| One course from the list: |
| or MATH 10B Methods of Mathematics: Calculus, Statistics, and Combinatorics |
| MATH 1A Calculus [4] |
| or MATH 1B Calculus |
| MATH 54 Linear Algebra and Differential Equations [4] |
| MATH 55 Discrete Mathematics [4] |
| STAT 2 Introduction to Statistics [4] |
| or STAT 20 Introduction to Probability and Statistics |
| or STAT 21 Introductory Probability and Statistics for Business |
| STAT C8 Foundations of Data Science [4] |

Please note that AP exams and IB standard & HL exams do not satisfy the quantitative course requirement.

Transfer students and UC Berkeley students who wish to complete prerequisites at community colleges should consult assist.org (http://www.assist.org/web-assist/welcome.html) for further information about the appropriate transferable coursework. Like the AP exams, the Psychology and Biology IBHL scores of 5, 6 or 7 can be used to fulfill one of the prerequisites.

Upper Division/Tier II Requirements

Students must take at least 8 upper division courses according to the guidelines below.

Tier II: Survey - A total of 5 courses with at least one in each area

Biological

| PSYCH 110 Introduction to Biological Psychology [3] |
| PSYCH 114 Biology of Learning [3] |
| PSYCH C115C Neuroethology: Complex Animal Behaviors and Brains [4] |
| PSYCH 117 Human Neuropsychology [3] |
| PSYCH 124 The Evolution of Human Behavior [3] |
| PSYCH 125 The Developing Brain [3] |
| PSYCH C127 Cognitive Neuroscience [3] |

Cognitive & Development

| PSYCH C120 Basic Issues in Cognition [3] |
| or PSYCH 3A Principles of Psychology: American Cultures |

LINGUIS 5 Language and Linguistics [4]

PHILOS 3 The Nature of Mind [4]

or PHILOS 4 Knowledge and Its Limits

or PHILOS 5 Science and Human Understanding

or PHILOS 12A Introduction to Logic

or PHILOS 25B Modern Philosophy

POL SCI 1 Introduction to American Politics [4]

or POL SCI 2 Introduction to Comparative Politics

or POL SCI 4 Introduction to Political Theory
PSYCH 126 Percepción 3
PSYCH 140 Desarrollo psicológico 3
PSYCH C143 Adquisición del lenguaje 3
PSYCH 147 Métodos en el desarrollo cognitivo 3

Social/Personality
PSYCH 150 Psicología de la personalidad 3
PSYCH 156 Emotividad humana 3
PSYCH 160 Psicología social 3
PSYCH 166AC Psicología cultural 3
PSYCH 180 Psicología Industrial-Organizacional 3

Clinical
PSYCH 130 Psicología clínica 3
PSYCH 131 Psicología clínica psicopatológica 3
PSYCH 134 Psicología de la salud 3
PSYCH 135 Terapia de enfermedad mental: desarrollo, evaluación, y diseminación 3
PSYCH 130M Psicopatología a lo largo de la vida (Psicología 130M consiste en psicopatología de vida, no es la misma que Psicología 130. Los estudiantes que tomen tanto Psicología 130 y Psicología 131 están descartados de tomar Psicología 130M.) 3

Upper Division Electives/Tier III
- Seleccionar tres cursos de PSYCH division superior que se encuentren entre 104-182. Cada curso debe tener al menos 3.0 unidades.
- Cualquier curso de nivel superior debe contar para el tercer nivel.
- Psicología 149, Psicología 149A, Psicología 149B, Psicología 149C y Psicología 149D no se contará para los requisitos de la especialización.

Información adicional sobre los requisitos de las especializaciones de psicología superior:

PSYCH 102, H194A/B, H195A/B, 197, 198 y 199 no se contará para el curso requerido aunque los estudiantes están motivados a participar en la investigación.

Los estudiantes pueden usar hasta dos cursos de división superior fuera del departamento para satisfacer estas necesidades. El siguiente es una lista de cursos aprobados:

ANTHRO 106 Comportamiento primate 4
ANTHRO 149 Psicología antropológica 4
COG SCI C131 Modelos computacionales de la cognición 4
COMPSCI 188 Introducción a la inteligencia artificial 4
ECON 191 Psicología y economía 4
ESPM C126/ INTEGBI C144 Comportamiento animal 4
INTEGBI 139 Neurobiología del estrés 4
INTEGBI C143A Reloj biológico: fisiología y comportamiento 3
INTEGBI C144 Comportamiento animal 4
LEGALST 180 Bias implícito 4
LEGALST 181 Psicología y la ley 4
LEGALST 183 Psicología de la diversidad y discriminación en la ley americana 4
L & S C160V Felicidad 3
MCELLBI 160 Neurobiología celular y molecular 4
MCELLBI 165 Neurobiología del dolor 3
POL SCI 164A Psicología policial y la investigación 4
PB HLTH 129 Neurociencias y la edad 3
PB HLTH 129/ SOC WEL C181 Política, salud y criminalidad 3
UGBA 105 Liderazgo 3
UGBA 160 Insights del cliente 3

Existen dos programas de verano de especialización ofrecidos por el departamento de psicología: el "Clinical & Counseling" y "The Developing Child".

Requisitos del menor

1. Los menores de estudios deben ser declarados antes del primer día de clases de su Graduation Term de la programación (EGT). Si el EGT es una temporada de verano, un menor debe ser declarado antes del primer día de clases de la primera temporada de verano.
2. El menor debe tener un mínimo de 15 unidades (cinco cursos de 3-unidades).
3. Todos los cursos para cumplir los requisitos del menor de estudios deben tener crédito y deben ser tomados en una o dos temporadas de verano.
4. Un promedio general de 2.0 (GPA) es requerido para cursos utilizados para cumplir los requisitos del menor.
5. El menor debe ser abierto para todos los estudiantes de Berkeley; el certificado está disponible para estudiantes de verano.
6. No se puede usar más de un curso de nivel superior para simultaneamente cumplir el requisito de menor para un programa mayor y menor.

Psicología Clinical & Counseling

El menor de estudios en Clinical & Counseling (o certificado) consiste de 5 cursos, y una total de 15 cursos de nivel superior, incluyendo dos cursos core y tres electivos. Mientras que no es explicitamente requerido como parte del menor, esperamos que los estudiantes tomarán un General Psychology o Introducción a la psicología antes de ingresar al menor. Por favor, envíe un correo electrónico a psycminor@berkeley.edu con cualquier pregunta o visite la página web (https://psychology.berkeley.edu/students/undergraduate-program/minor-requirements/ para obtener más información y aplicar.

Requerimientos de necesidad

Necesidad 1

PSYCH 130M Psicopatología a lo largo de la vida [3]

Core 2

Electivas 1, 2, 3

PSYCH 136 Sexualidad humana [3]
PSYCH 137 Mind-Body y la salud [3]
PSYCH 139 Casos de estudio en psicología clínica [3]
PSYCH 138 Salud mental global [3]
PSYCH 171 Investigación psicológica en familias de inmigrantes [3]
Learning Outcomes
The Clinical & Counseling Psychology minor allows students to explore the diverse career paths of clinical and counseling psychology. The curriculum focuses on basic psycho-biological and sociocultural mechanisms (e.g., neurobiology, social relationships, culture/race/ethnicity) that underlie common mental health problems across the life span. It also provides an overview of major theories and issues/debates in applied mental health professions across different practice settings (e.g., schools, independent practice, hospitals, and industry).

The Developing Child
The Developing Child minor is offered through the Department of Psychology in partnership with Early Development & Learning Science (ED&LS) at the Institute of Human Development (http://ihd.berkeley.edu/). It is an interdisciplinary, developmental science Summer Minor and Certificate program, focused on children from the prenatal period to age 8. Integrating research, practice, and policy with problem-solving and implementation skills for the real world, the innovative coursework and practicum compliments many areas of study. The program helps students develop an interdisciplinary approach to understanding child development in a variety of contexts.

The minor is available to enrolled undergraduate UC Berkeley students. The certificate is available to all. Both require a Declaration of Minor/ Certificate Form to be submitted and must be completed in one or two summers. All coursework is taught in English and requires complex discussion and problem-solving. Please email edls@berkeley.edu with any questions or visit the program website (http://ihd.berkeley.edu/research-centers/early-development-learning-science/minor/) for more information and to apply.

Required Coursework
The Developing Child consists of five core, required 3-unit courses:

PSYCH 142 Applied Early Developmental Psychology 3
PSYCH 149 Early Development & Learning Science Core Seminar 3
PSYCH 149A The Developing Child Practicum: Linking Research and Practice 3
PSYCH 149B Contexts of Early Development 3
PSYCH 149D Early Childhood Policy 3

Learning Goals
Upon completion of the Developing Child Summer Minor and Certificate, students will:

1. Understand the theoretical bases and empirical science of early development and learning, from prenatal to age 8;
2. Examine the interaction of biological, psychological, and socio-cultural mechanisms that shape young children's health, development, and learning;
3. Develop an interdisciplinary and scholarly approach to research, practice, and policy issues across early development and learning science domains;
4. Learn how to apply developmental science for positive impact in the lives of young children and their families;
5. Learn how to apply developmental science for positive impact in the lives of young children and their families;
6. Understand how to establish and foster effective partnerships with families, schools, organizations, and communities, at local, state, national, and international levels to create more responsive systems to serve diverse young children and their families.

Undergraduate students must fulfill the following requirements in addition to those required by their major program.

For detailed lists of courses that fulfill college requirements, please review the College of Letters & Sciences (http://guide.berkeley.edu/undergraduate/colleges-schools/letters-science/entry-level-writing-requirement/) All students who will enter the University of California as freshmen must demonstrate their command of the English language by fulfilling the Entry Level Writing requirement. Fulfillment of this requirement is also a prerequisite to enrollment in all reading and composition courses at UC Berkeley.

American History and American Institutions (http://guide.berkeley.edu/undergraduate/colleges-schools/letters-science/american-history-institutions-requirement/) The American History and Institutions requirements are based on the principle that a US resident graduated from an American university, should have an understanding of the history and governmental institutions of the United States.

Berkeley Campus Requirement
American Cultures (http://americancultures.berkeley.edu/students/courses/) All undergraduate students at Cal need to take and pass this course in order to graduate. The requirement offers an exciting intellectual environment centered on the study of race, ethnicity and culture of the United States. AC courses offer students opportunities to be part of research-led, highly accomplished teaching environments, grappling with the complexity of American Culture.

College of Letters & Science Essential Skills Requirements
Quantitative Reasoning (http://guide.berkeley.edu/undergraduate/colleges-schools/letters-science/quantitative-reasoning-requirement/) The Quantitative Reasoning requirement is designed to ensure that students graduate with basic understanding and competency in math, statistics, or computer science. The requirement may be satisfied by exam or by taking an approved course.

Foreign Language (http://guide.berkeley.edu/undergraduate/colleges-schools/letters-science/foreign-language-requirement/) The Foreign Language requirement may be satisfied by demonstrating proficiency in reading comprehension, writing, and conversation in a
foreign language equivalent to the second semester college level, either by passing an exam or by completing approved course work.

Reading and Composition (http://guide.berkeley.edu/undergraduate/colleges-schools/letters-science/reading-composition-requirement/)

In order to provide a solid foundation in reading, writing, and critical thinking the College requires two semesters of lower division work in composition in sequence. Students must complete parts A & B reading and composition courses in sequential order by the end of their fourth semester.

College of Letters & Science 7 Course Breadth Requirements

Breadth Requirements (http://guide.berkeley.edu/undergraduate/colleges-schools/letters-science/#breadthrequirementstext)

The undergraduate breadth requirements provide Berkeley students with a rich and varied educational experience outside of their major program. As the foundation of a liberal arts education, breadth courses give students a view into the intellectual life of the University while introducing them to a multitude of perspectives and approaches to research and scholarship. Engaging students in new disciplines and with peers from other majors, the breadth experience strengthens interdisciplinary connections and context that prepares Berkeley graduates to understand and solve the complex issues of their day.

Unit Requirements

• 120 total units
• Of the 120 units, 36 must be upper division units
• Of the 36 upper division units, 6 must be taken in courses offered outside your major department

Residence Requirements

For units to be considered in “residence,” you must be registered in courses on the Berkeley campus as a student in the College of Letters & Science. Most students automatically fulfill the residence requirement by attending classes here for four years, or two years for transfer students. In general, there is no need to be concerned about this requirement, unless you go abroad for a semester or year or want to take courses at another institution or through UC Extension during your senior year. In these cases, you should make an appointment to meet an adviser to determine how you can meet the Senior Residence Requirement.

Note: Courses taken through UC Extension do not count toward residence.

Senior Residence Requirement

After you become a senior (with 90 semester units earned toward your BA degree), you must complete at least 24 of the remaining 30 units in residence in at least two semesters. To count as residence, a semester must consist of at least 6 passed units. Intercampus Visitor, EAP, and UC Berkeley-Washington Program (UCDC) units are excluded.

You may use a Berkeley Summer Session to satisfy one semester of the Senior Residence requirement, provided that you successfully complete 6 units of course work in the Summer Session and that you have been enrolled previously in the college.

Modified Senior Residence Requirement

Participants in the UC Education Abroad Program (EAP), Berkeley Summer Abroad, or the UC Berkeley Washington Program (UCDC) may meet a Modified Senior Residence requirement by completing 24 (excluding EAP) of their final 60 semester units in residence. At least 12 of these 24 units must be completed after you have completed 90 units.

Upper Division Residence Requirement

You must complete in residence a minimum of 18 units of upper division courses (excluding UCEAP units), 12 of which must satisfy the requirements for your major.

Students are strongly advised to work with an academic advisor (https://psychology.berkeley.edu/students/undergraduate-program/academic-advising/) to determine a personal program plan. Each program plan will differ depending on previous credit received, course schedules, and available offerings. To see one sample program plan, visit the Psychology undergraduate program planning webpage (https://psychology.berkeley.edu/students/undergraduate-program/program-planning/).

Students are encouraged to familiarize themselves with the Psychology major requirements before making a program plan. For more detailed information about specific requirements, see the College Requirements and Major Requirements tabs.

Course offerings are subject to change every semester and there are multiple course options that can satisfy many of the requirements. Students must check the Online Schedule of Classes (https://classes.berkeley.edu/search/site/?f%5B0%5D=im_field_subject_area%3A36) for the most up-to-date course offerings that will satisfy a particular requirement.

Mission

The Psychology Department at Berkeley reflects the diversity of the discipline’s mission covering six key areas of research: Behavioral and Systems Neuroscience; Clinical Science; Cognition; Cognitive Neuroscience; Developmental, and Social-Personality Psychology. Despite the existence of these specialization areas, the program learning goals focus on fostering methodological, statistical, and critical thinking skills that are not tied to any one particular content area in psychology but are relevant for all of them.

Most of the program level goals are introduced in PSYCH 1 These goals are extended and reinforced in a majority of the core courses. These include PSYCH 101, required of all majors, and the upper division Tier II courses that survey the major fields of psychology. The program is designed to ensure that all students gain broad exposure to the field of psychology. In addition, students are able to develop a deeper understanding of at least one major content area in psychology.

Learning Goals for the Major

1. Understand basic concepts that characterize psychology as a field of scientific inquiry, and appreciate the various subfields that form the discipline as well as things that differentiate it from other related disciplines
2. Develop an understanding of the central questions/issues in contemporary psychology as well as a historical perspective of psychological theories and key empirical data
3. Develop a thorough understanding of one of the major content areas of psychology (i.e., Social/Persnality, Developmental, Clinical, Cognitive, Biological)
4. Develop skills to critically evaluate the presentation of scientific ideas and research in original scientific papers as well as in the popular media.
5. Become familiar with research methods used in psychological research, and become proficient in basic concepts of statistical analyses and familiar with more advanced methods in data analyses and modeling.
6. Learn to develop, articulate, and communicate, both orally and in written form, a testable hypothesis, or an argument drawing from an existing body of literature.
7. Apply a psychological principle to an everyday problem, or take an everyday problem and identify the relevant psychological mechanisms/ issues.

Major Maps help undergraduate students understand academic, co-curricular, and discovery opportunities at UC Berkeley based on their intended major or field of interest. Developed by the Division of Undergraduate Education in collaboration with academic departments, these experience maps will help you:

- **Explore** your major and gain a better understanding of your field of study
- **Connect** with people and programs that inspire and sustain your creativity, drive, curiosity and success
- **Discover** opportunities for independent inquiry, enterprise, and creative expression
- **Engage** locally and globally to broaden your perspectives and change the world
- **Reflect** on your academic career and prepare for life after Berkeley

Use the major map below as a guide to planning your undergraduate journey and designing your own unique Berkeley experience.

View the Psychology Major Map PDF. ([https://ue.berkeley.edu/sites/default/files/psychology.pdf](https://ue.berkeley.edu/sites/default/files/psychology.pdf))

**Psychology**

Expand all course descriptions [+]

**PSYCH 1 General Psychology 3 Units**

Terms offered: Fall 2023, Summer 2023 8 Week Session, Spring 2023

Introduction to the principal areas, problems, and concepts of psychology. This course is required for the major; students not considering a psychology major are directed to 2.

General Psychology: Read More [+]

Rules & Requirements

Credit Restrictions: Students will receive no credit for PSYCH 1 after completing PSYCH 2, PSYCH W1, or PSYCH N1. A deficient grade in PSYCH 1 may be removed by taking PSYCH N1.

Repeat rules: Course may be repeated for credit under special circumstances: When receiving a failing grade in this course or a course equivalent (i.e. Psych N1).

Hours & Format

Fall and/or spring: 15 weeks - 2-3 hours of lecture and 1-0 hours of discussion per week

Summer: 6 weeks - 5 hours of lecture and 2.5 hours of discussion per week
8 weeks - 4-6 hours of lecture and 2-0 hours of discussion per week

Additional Details

Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

General Psychology: Read Less [-]

**PSYCH N1 General Psychology 3 Units**

Terms offered: Summer 2020 Second 6 Week Session, Summer 2019 Second 6 Week Session, Summer 2018 Second 6 Week Session

Introduction to the principal areas, problems, and concepts of psychology. This course is required for the major; students not considering a psychology major are directed to 2.

General Psychology: Read More [+]

Rules & Requirements

Prerequisites: Students who have passed Psych 1, Psych W1, or Psych 2 may not enroll in Psych N1

Credit Restrictions: Student receives a failing grade in PSYCH N1 and is eligible to take PSYCH 1 or PSYCH W1 in order to remove the deficient grade in lieu of repeating PSYCH N1. Students will not receive credit for Psych 1, Psych W1, or Psych N1 after completing Psych 2.

Repeat rules: Course may be repeated for credit under special circumstances: When students receive a failing grade, they MAY repeat this or a course equivalent (Psych 1 or W1).

Hours & Format

Summer: 6 weeks - 7.5 hours of lecture per week

PSYCH 3 Introduction to How the Brain Works 1 Unit
Terms offered: Summer 2022 Second 6 Week Session, Summer 2021 Second 6 Week Session, Summer 2020 Second 6 Week Session
This course will give a rigorous yet accessible overview of our current understanding of how the brain works and how it is altered by experience. Specifically, the class provides: an introduction to the structure and function of the sensory and motor systems; discussions of disorders and phenomena such as blindsight, synaesthesia, color blindness, and phantom limbs; and a lecture with presentation of classical experiments on the capacity of the young and adult brain for plasticity and learning.
Introduction to How the Brain Works: Read More [+]

Rules & Requirements
Prerequisites: A year of college-level general biology for majors

PSYCH 5 Technology vs. Psychology: The Internet Revolution and the Rise of the Virtual Self 2 Units
Terms offered: Summer 2022 Second 6 Week Session, Summer 2021 Second 6 Week Session, Summer 2019 Second 6 Week Session
Most people have an online alter ego that is stronger and sexier but also angrier, more impulsive, and less ethical. These traits can become incorporated into offline personality, turning us into our avatar. Other psychological damage comes from the lack of online privacy and our new relationship with information. But the “Net” effect is not all bad; technology can also contribute to psychological wellbeing and make possible new treatments, including computerized therapy and virtual reality exposure therapy.
Technology vs. Psychology: The Internet Revolution and the Rise of the Virtual Self: Read More [+]

Hours & Format
Summer: 6 weeks - 5 hours of lecture per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

PSYCH 6 Stress and Coping 2 Units
Terms offered: Summer 2023 Second 6 Week Session, Summer 2022 Second 6 Week Session, Summer 2021 Second 6 Week Session
This course is designed to provide students with an in-depth analysis of the various areas within the field of psychology that address topics related to stress and coping. In particular, we will cover the biological, social, personality, cognitive, and clinical factors that play a role in the development of stress and subsequent coping techniques that can be used to deal with stress. The class will have a strong focus on the empirical findings relating to the subject.
Stress and Coping: Read More [+]

Rules & Requirements
Prerequisites: Psychology 1, N1, W1, 2, or equivalent

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week
Summer: 6 weeks - 5 hours of lecture per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Stress and Coping: Read Less [-]

PSYCH 7 The Person in Big Data 2 Units
Terms offered: Summer 2022 Second 6 Week Session, Summer 2021 Second 6 Week Session, Summer 2019 Second 6 Week Session
This course will introduce students to the basic principles and methods of personality and social psychology as applied to a rapidly growing topic of modern society—the collection and analysis of online social “big data.” Students will learn about the ways in which big data has historically been defined, collected, and utilized, as well as fundamental concepts in person perception and social behavior that are relevant to topics of big data collection, analysis, and interpretation.
The Person in Big Data: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week
Summer: 6 weeks - 5 hours of lecture per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
The Person in Big Data: Read Less [-]

PSYCH 8 Music and the Brain 2 Units
Terms offered: Summer 2015 10 Week Session, Summer 2015 Second 6 Week Session
This course will explore mental processes that allow listeners to perceive music and performers to produce it. We will compare music from various traditions to examine shared cognitive principles and emotional responses; comparisons to language will highlight neural specializations for music. Developmental psychology will inform discussion of learned vs. innate components of musical behavior. Students will design experiments to test hypotheses relating to music cognition.
Music and the Brain: Read More [+]

Rules & Requirements
Prerequisites: Psychology 1, N1, W1, 2, or equivalent

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture per week
Summer: 6 weeks - 5 hours of lecture per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Music and the Brain: Read Less [-]
PSYCH 9 Changing Behavior: Lessons from a Dog Trainer 1 Unit
Terms offered: Summer 2017 Second 6 Week Session
In this course, we will examine behavior change -- in you, and in those others you wish you could change -- by looking at basic principles that apply across species: operant conditioning, classical conditioning, motivation, stress and development. Animal trainers rely on very specific principles when modifying behavior, and those principles apply to every animal, human and non-human animals alike. Come learn what training animals can tell you about your own life, learning, motivation and habits!

Changing Behavior: Lessons from a Dog Trainer: Read More [+]

Rules & Requirements
Credit Restrictions: Students will receive no credit for Psychology 9 after passing Psychology 126.

Hours & Format
Summer: 6 weeks - 2.5 hours of lecture per week

Additional Details
Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

PSYCH 18 Contemporary Issues in Organizational Psychology with a Focus on Leadership and Creativity 2 Units
Terms offered: Prior to 2007
This course will explore current questions of industrial and organizational psychology. It will look at the following topics: modern organizational models & its requirements, performance & motivation, job satisfaction & positive psychology, teams in organizations & psychological safety, leadership & corporate culture, special track in creativity and innovation.

Contemporary Issues in Organizational Psychology with a Focus on Leadership and Creativity: Read More [+]

Objectives & Outcomes
Student Learning Outcomes: After the class you should be able to understand and discuss, and consult on current organizational topics. Since I/O psychology is closely linked to leadership skills, we expect that due to the course you will learn the basic requirements for leading a team in an organization.

Rules & Requirements
Prerequisites: An introductory psychology course is recommended but not required. The course is for pre-majors considering the field of psychology and are especially interested in teams and leadership as well as creativity

Hours & Format
Summer: 6 weeks - 5-7 hours of lecture per week

Additional Details
Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: Letter grade. Alternative to final exam.

Contemporary Issues in Organizational Psychology with a Focus on Leadership and Creativity: Read Less [-]
PSYCH 22 Neurons in Context 3 Units
Terms offered: Not yet offered
We will introduce the basics of neurobiology while exploring how experience of adversity, enrichment, and other variables can shape brain development and behavior. We will look at scientific data figures and discuss experimentation, data interpretation, and scientific writing. Basic knowledge will be gained on neurotransmission, mechanisms underlying learning and memory, experience dependent plasticity, stress, gonadal hormones, and psychoactive drugs. Students will become familiar with circuits, cells, synapses, proteins, epigenetics, and genetics.

Objectives & Outcomes
Course Objectives: Gain familiarity with basics of stress and gonadal hormone systems
Gain familiarity with the scientific process and scientific papers
Learn basics of neurobiology and neuroplasticity
Understand how different forms of adversity can have specific effects
Understand how the environment can affect how the brain develops and works

Student Learning Outcomes: Be able to discuss how social policy can be informed by neurobiological data on a basic level
Be able to look at a plot of neurobiology data and interpret an outcome
Be able to write about differences in data metrics and their interpretation
Understand how experience can affect gene expression and neural function
Understand how genetics cannot directly influence behavior without cellular functions

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of seminar per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Wilbrecht

PSYCH 24 Freshman Seminars 1 Unit
Terms offered: Fall 2023, Spring 2023, Spring 2022
The Berkeley Seminar Program has been designed to provide new students with the opportunity to explore an intellectual topic with a faculty member in a small-seminar setting. Berkeley Seminars are offered in all campus departments, and topics vary from department to department and semester to semester.

Objectives & Outcomes
Course Objectives: Gain familiarity with basics of stress and gonadal hormone systems
Gain familiarity with the scientific process and scientific papers
Learn basics of neurobiology and neuroplasticity
Understand how different forms of adversity can have specific effects
Understand how the environment can affect how the brain develops and works

Student Learning Outcomes: Be able to discuss how social policy can be informed by neurobiological data on a basic level
Be able to look at a plot of neurobiology data and interpret an outcome
Be able to write about differences in data metrics and their interpretation
Understand how experience can affect gene expression and neural function
Understand how genetics cannot directly influence behavior without cellular functions

Hours & Format
Fall and/or spring: 15 weeks - 1 hour of seminar per week
Summer: 6 weeks - 2.5 hours of seminar per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: The grading option will be decided by the instructor when the class is offered. Final exam required.

PSYCH 39E Freshman/Sophomore Seminar 2 - 4 Units
Terms offered: Spring 2013, Fall 2011, Fall 2010
Freshman and sophomore seminars offer lower division students the opportunity to explore an intellectual topic with a faculty member and a group of peers in a small-seminar setting. These seminars are offered in all campus departments; topics vary from department to department and from semester to semester.

Objectives & Outcomes
Course Objectives: Gain familiarity with basics of stress and gonadal hormone systems
Gain familiarity with the scientific process and scientific papers
Learn basics of neurobiology and neuroplasticity
Understand how different forms of adversity can have specific effects
Understand how the environment can affect how the brain develops and works

PSYCH 62 The Science and Practice of Happiness 1 Unit
Terms offered: Prior to 2007
In this course, we will tour different approaches to understanding happiness, covering the great thinking from the past millennia found in the humanities and contemplative traditions (e.g., Indigenous traditions, Buddhism, Romanticism) and the recent social biological study of happiness. We will focus topics such as compassion, awe, gratitude, cooperation, forgiveness, narrative, purpose, and resilience. Each topic will include discussion of the wisdom from the humanities (e.g., art, poetry, philosophy), social science and neurophysiology, and a research-tested practice in which students learn to cultivate happiness and the resilience to stress.
The Science and Practice of Happiness: Read More [+]

Objectives & Outcomes

Course Objectives: To come to understand the health and well-being benefits of happiness
To learn about the neurophysiology and evolutionary processes underlying happiness
To learn actionable skills that will enable them to handle stress with more agency and skill
To learn different cultural approaches to the meaningful life

Student Learning Outcomes: To become acquainted with the science of happiness
To learn actionable skills that they can apply in their careers and work after graduation

Rules & Requirements

Credit Restrictions: Students will receive no credit for PSYCH W62 after completing PSYCH 62. A deficient grade in PSYCH W62 may be removed by taking PSYCH 62.

Hours & Format
Fall and/or spring: 15 weeks - 1-1 hours of lecture and 0-1 hours of discussion per week

Additional Details

Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

PSYCH 70 Exploring Career Options as a Mental Health Practitioner 2 Units
Terms offered: Summer 2021 Second 6 Week Session
This course is designed for domestic and international undergraduate students who are interested in exploring various careers in mental health practice under the U.S. context. The course will utilize lectures, small group discussions, career assessment tools, online research, panel discussions, informational interviews and readings to help students formulate a future career plan. Students will have opportunities to communicate and network with clinical practitioners, attend professional workshops and events, explore potential graduate school applications and begin to seek educational and internship opportunities.

Exploring Career Options as a Mental Health Practitioner: Read More [+]
Objectives & Outcomes
Course Objectives:
- Describe various mental health practice career options and job functions.
- Identify and discuss social-cultural factors that influence career decision making.
- Introduce resources and strategies for career research in becoming a mental health practitioner.
- Review career assessment tools and results to increase students' self-awareness.

Student Learning Outcomes:
- Students will be able to clarify cultural and family values which often affect career decision making.
- Students will be able to conduct research and gather information about career options, graduate schools and internship opportunities in practicing psychology, as well as learn about best practices for building job/internship search skills.
- Students will be able to create an action plan including steps that they can take to move forward in their career development and planning.
- Students will be able to examine their interests, skills, values and personality preferences related to the world of clinical practice in psychology through career assessment instruments.

Hours & Format
Summer:
- 3 weeks - 10-4 hours of lecture and 0-6 hours of discussion per week
- 6 weeks - 5-2 hours of lecture and 0-3 hours of discussion per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Alternate method of final assessment during regularly scheduled final exam group (e.g., presentation, final project, etc.).

Exploring Career Options as a Mental Health Practitioner: Read Less [-]
PSYCH 84 Sophomore Seminar 1 or 2 Units
Terms offered: Fall 2021, Spring 2005
Sophomore seminars are small interactive courses offered by faculty members in departments all across the campus. Sophomore seminars offer opportunity for close, regular intellectual contact between faculty members and students in the crucial second year. The topics vary from department to department and semester to semester. Enrollment limited to 15 sophomores.
Sophomore Seminar: Read More [+]

Rules & Requirements

Prerequisites: At discretion of instructor
Repeat rules: Course may be repeated for credit when topic changes.

Hours & Format
Fall and/or spring:
5 weeks - 3-6 hours of seminar per week
10 weeks - 1.5-3 hours of seminar per week
15 weeks - 1-2 hours of seminar per week

Summer:
6 weeks - 2.5-5 hours of seminar per week
8 weeks - 2-4 hours of seminar per week

Additional Details
Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: The grading option will be decided by the instructor when the class is offered. Final Exam To be decided by the instructor when the class is offered.

Sophomore Seminar: Read Less [-]

PSYCH 88 Data Science for Cognitive Neuroscience 3 Units
Terms offered: Spring 2018
The human brain is a complex information processing system and is currently the topic of multiple fascinating branches of research. Understanding how it works is a very challenging scientific task. In recent decades, multiple techniques for imaging the activity of the brain at work have been invented, which has allowed the field of cognitive neuroscience to flourish. Cognitive neuroscience is concerned with studying the neural mechanisms underlying various aspects of cognition, by relating the activity in the brain to the tasks being performed by it. This typically requires exciting collaborations with other disciplines (e.g. psychology, biology, physics, computer science).

Data Science for Cognitive Neuroscience: Read More [+]

Rules & Requirements

Prerequisites: This course is a Data Science connector course and may only be taken concurrently with or after COMPSCI C8/INFO C8/STAT C8

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of laboratory per week

Additional Details
Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

Data Science for Cognitive Neuroscience: Read Less [-]

PSYCH 98 Supervised Group Study 1 - 3 Units
Terms offered: Spring 2016, Fall 2015, Spring 2015
Group study of selected topics. Enrollment restricted. See Introduction to Courses and Curriculum section of this catalog.

Supervised Group Study: Read More [+]

Rules & Requirements

Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 1-3 hours of directed group study per week

Additional Details
Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: Offered for pass/not pass grade only. Final exam not required.

Supervised Group Study: Read Less [-]
PSYCH 99 Supervised Independent Study and Research 1 - 3 Units
Terms offered: Fall 2013, Fall 2012, Spring 2012
Intended for freshmen and sophomores who wish to undertake a program of individual inquiry on a topic in psychology.
Supervised Independent Study and Research: Read More [+]

Rules & Requirements
Prerequisites: 1 or consent of instructor and 3.4 GPA or higher
Repeat rules: Course may be repeated for credit without restriction.

Hours & Format
Fall and/or spring: 15 weeks - 0 hours of independent study per week
Summer:
6 weeks - 2.5-7.5 hours of independent study per week
8 weeks - 2-6 hours of independent study per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Offered for pass/not pass grade only. Final exam not required.

Supervised Independent Study and Research: Read Less [-]

PSYCH 101 Research and Data Analysis in Psychology 4 Units
Terms offered: Fall 2023, Summer 2023 8 Week Session, Spring 2023
The course will concentrate on hypothesis formulation and testing, tests of significance, analysis of variance (one-way analysis), simple correlation, simple regression, and nonparametric statistics such as chi-square and Mann-Whitney U tests. Majors intending to be in the honors program must complete 101 by the end of their junior year.
Research and Data Analysis in Psychology: Read More [+]

Rules & Requirements
Prerequisites: 1 and completion of the quantitative prerequisites for the major
Credit Restrictions: Students will not receive credit for Psych 101 after having completed Psych 10 or Psych 101D. Deficient grade in Psych 10 can be replaced with Psych 101. Deficient grade in Psych 101D can be replaced with Psych 101.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week
Summer: 8 weeks - 6-10 hours of lecture and 0-4 hours of discussion per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

Data Science for Research Psychology: Read Less [-]

PSYCH 101D Data Science for Research Psychology 4 Units
Terms offered: Fall 2019
This Python based course builds upon the inferential and computational thinking skills developed in the Foundations of Data Science course by tying them to the classical statistical and research approaches used in Psychology. Topics include experimental design, control variables, reproducibility in science, probability distributions, parametric vs. nonparametric statistics, hypothesis tests (t-tests, one and two way ANOVA, chi-squared and odds-ratio), linear regression and correlation.

Data Science for Research Psychology: Read More [+]

Rules & Requirements
Prerequisites: Completion of the general psychology prerequisite (1, N1, or W1) and Foundations of Data Science (COMPSCI C8 / INFO C8 / STAT C8). Prospective Psychology majors need to take 101 or 101D to be admitted to the major. Majors intending to be in the honors program must complete 102 by the end of their junior year
Credit Restrictions: Not repeatable. Students will not receive credit for Psych 101D after having completed Psych 10 or Psych 101. Deficient grade in Psych 10 can be replaced with Psych 101. Deficient grade in Psych 101D can be replaced with Psych 101.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture and 2 hours of laboratory per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

Data Science for Research Psychology: Read Less [-]
PSYCH 102 Methods for Research in Psychological Sciences 4 Units
Terms offered: Fall 2023, Fall 2022, Fall 2021
The goal of this course is to give students a strong foundation in statistical methodologies prevalent in the psychological sciences, and to prepare them for more advanced and specialized courses in statistics, machine learning, and data science. This course will cover fundamental principles underlying common statistical methods, as well as specific statistical models, largely centered around the General Linear Model, ranging from t-tests to multilevel models. All analyses will be conducted in the statistical programming language R.

Methods for Research in Psychological Sciences: Read More [+]

Objectives & Outcomes

Student Learning Outcomes: Apply a psychological principle to an everyday problem, or take an everyday problem and identify the relevant psychological mechanisms/issues. This learning goal will not be emphasized in the class but students will learn how to formulate a psychological principle in terms of a particular model. This formulation is key to identify how particular problems observed in the student’s everyday life could be analyzed.

Become familiar with research methods used in psychological research, and become proficient in basic concepts of statistical analyses and modeling with more advanced methods in data analyses and modeling. This is the central learning goal of this class.

Develop a thorough understanding of one of the major content areas of psychology (i.e., Social/Personality, Developmental, Clinical, Cognitive, Biological). Although, we might be using examples from different areas of psychology, the student will not gain a major understanding of these content areas in this course.

Develop an understanding of the central questions/issues in contemporary psychology as well as a historical perspective of psychological theories and key empirical data. In this class, students will learn the current approaches in statistical modeling but these will be related to the more traditional statistics that have been used in the field in prior years giving the students a historical perspective.

Develop skills to critically evaluate the presentation of scientific ideas and research in original scientific papers as well as in the popular media. In this course, the students will learn not only how to formulate competing hypothesis and generate the corresponding statistical models but also how to best interpret the results from these quantitative analyses so that they can be communicated in written form in publication format or in spoken form for presentations. These skills are critical for the evaluation of scientific work and conclusions performed by experts in the field and others.

Learn to develop, articulate, and communicate, both orally and in written form, a testable hypothesis, or an argument drawing from an existing body of literature. The students will not make a formal oral presentation during this class but will be asked during lecture and section to orally explain their results and reasoning. The final written project is designed to teach how to write-up quantitative analyses and statistical reasoning within a longer manuscript analyzing a particular question in the field of psychology.

Understand basic concepts that characterize psychology as a field of scientific inquiry, and appreciate the various subfields that form the discipline as well as things that differentiate it from other related disciplines. Scientific inquiry in Social Sciences and in Psychology in particular is based on the formulation of statistical models. Each scientific hypothesis corresponds to a particular model and hypothesis testing involves comparing models in terms of their predictive power. The field of psychology, because of the complexity of the data it attempts to explain relies heavily (and more so that other biological disciplines) on statistical modeling and other quantitative approaches. Students who desire to pursue a scientific career in psychology need to be well trained in these methods.

PSYCH 106 Psychology of Dreams 3 Units
Terms offered: Fall 2009, Fall 2006, Fall 2002
Dreaming is a necessary, universal nightly activity of the human mind and brain. This class will cover some of the major psychological theories, interpretations, and uses that have been made of dreams. Students will be encouraged to keep dream diaries to provide an experiential component to the class and so that they may apply the class topics and do research using the material they generate themselves.

Psychology of Dreams: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

PSYCH N108 Clinical Applications of East Asian Meditation Practices 3 Units
Terms offered: Summer 2015 10 Week Session, Summer 2015 Second 6 Week Session
This course applies views and practices of Buddhist, Taoist, and Confucian schools of meditation. The emphasis in the course will be on practical and clinical applications of meditation such as working with emotions and the quest for psychological well-being. The basic laboratory technique will be various types of meditation.

Clinical Applications of East Asian Meditation Practices: Read More [+]

Rules & Requirements

Prerequisites: Psychology 1, N1, W1, 2, or equivalent

PSYCH N110 Introduction to Biological Psychology 3 Units
Terms offered: Summer 2023 Second 6 Week Session, Summer 2022
Second 6 Week Session, Summer 2021 Second 6 Week Session
Survey of relations between behavioral and biological processes. Topics
include sensory and perceptual processes, neural maturation, natural
bases of motivation, and learning.
Introduction to Biological Psychology: Read More [+]

Rules & Requirements
Prerequisites: Students who have completed Psych C61 or Psych 110
may not enroll in Psych N110
Credit Restrictions: Students will receive no credit for PSYCH N110
after completing PSYCH 110. A deficient grade in PSYCH N110 may be
removed by taking PSYCH 110.

Hours & Format
Summer: 6 weeks - 7.5 hours of lecture per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Introduction to Biological Psychology: Read Less [-]

PSYCH 111 Human Neuroanatomy 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
This course covers the anatomical composition of the human brain with
particular emphasis on modern understanding regarding the micro-
and macroanatomy of the cerebral cortex and the underlying white
matter. The course is designed for students who intend to continue their
postgraduate education toward a masters, doctorate, or medical degree
in a field involving the study of the human brain.
Human Neuroanatomy: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of
discussion per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Human Neuroanatomy: Read Less [-]
PSYCH C113 Biological Clocks: Physiology and Behavior 3 Units
Terms offered: Fall 2023, Fall 2020, Fall 2018
A consideration of the biological clocks that generate daily, lunar, seasonal and annual rhythms in various animals including people. Emphasis on neuroendocrine substrates, development and adaptive significance of estrous cycles, feeding rhythms, sleep-wakefulness cycles, reproductive and hibernation cycles, body weight and migratory cycles.
Biological Clocks: Physiology and Behavior: Read More [+]

Rules & Requirements
Prerequisites: Completion of biological prerequisites for the major and one of the following: 110 or a course in animal organismal physiology (Integrative Biology 132, 138, 140, 148, or Molecular and Cell Biology 160)

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Kriegsfeld

Also listed as: INTEGBI C143A
Biological Clocks: Physiology and Behavior: Read Less [-]

PSYCH 114 Biology of Learning 3 Units
Terms offered: Fall 2023, Spring 2022, Spring 2021
The biology of learning and neural plasticity is critical to our understanding of development, culture, behavioral change, uniqueness of individuals, and limits to an organism’s potential. We will study experimental investigations of behavior and neurobiology at the cellular and circuit level to get a basic introduction to what is known and unknown about learning and neural plasticity. Topics may include associative learning, habit formation, fear, memory systems, neurons, synapses, dendritic spines and axonal boutons, LTP, and adult neurogenesis. We will discuss these topics in the context of normal development and disease. Students will become familiar with thinking about the brain at the level of circuits, cells, synapses, and proteins.
Biology of Learning: Read More [+]

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Wilbrecht

PSYCH 115 Introduction to Brain Imaging Analysis Methods 3 Units
Terms offered: Fall 2022, Fall 2021, Fall 2020
An introduction to brain imaging analysis methods with emphasis on functional magnetic resonance imaging (fMRI) of the human brain. Topics include: Basic MR physics of fMRI signals; linearity of the fMRI signal; time versus space resolution trade offs; noise in neuroimaging; correlation analysis; visualization methods; cortical reconstruction, inflation, and flattening; reverse engineering; relationship between brain activation and cognitive state; multi-voxel pattern analyses; fMRI-adaptation.
Introduction to Brain Imaging Analysis Methods: Read More [+]

Rules & Requirements
Prerequisites: Psychology C127 / Cognitive Science C127; Consent of Instructor; Basic coding experience (preferably with Matlab) is encouraged

Credit Restrictions: Students will receive no credit for PSYCH 115 after completing PSYCH 115. A deficient grade in PSYCH 115 may be removed by taking PSYCH 115.

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of seminar per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Alternate method of final assessment during regularly scheduled final exam group (e.g., presentation, final project, etc.).

Introduction to Brain Imaging Analysis Methods: Read Less [-]
PSYCH C115C Neuroethology: Complex Animal Behaviors and Brains 4 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
Neuroethologists study neural systems by combining behavior and neuroscience to understand the neural mechanism that have evolved in various animals to solve particular problems encountered in their environmental niches. This comparative approach that emphasizes how information is processed and transformed by the brain is particularly powerful for understanding neural systems. In this course, you will learn important concepts in ethology, sensory systems, motor systems and neural plasticity and development by studying the behavior and brains of animals such as crickets, lobsters, barn-owls, honey-bees, echolocating bats, electric fishes and songbirds.
Neuroethology: Complex Animal Behaviors and Brains: Read More [+]

Rules & Requirements

Prerequisites: One foundational lower division level in general Biology, Animal Behavior or Neurosciences; UC Berkeley classes that satisfy this requirement are Bio 1A, Bio1B, IB 31, Psych C61/MCB C61, or Psych 110

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Theunissen
Also listed as: INTEGBI C147

Neuroethology: Complex Animal Behaviors and Brains: Read Less [-]

PSYCH C116 Hormones and Behavior 3 Units
Terms offered: Spring 2022, Spring 2021, Spring 2019
This course provides a comprehensive overview of behavioral endocrinology beginning with hormone production and actions on target issues and continuing with an exploration of a variety of behaviors and their hormonal regulation/consequences. The course uses a comparative approach to examine the reciprocal interactions between the neuroendocrine system and behavior, considering the effects of hormone on development and adult behavior in addition to how behavior regulates endocrine physiology. While much of the course focuses on non-human vertebrate species, the relevance to humans is explored where appropriate. Topics include sexual differentiation and sex differences in behavior, reproductive, parental, and aggressive behaviors, and hormonal and behavioral homeostatic regulation.

Hormones and Behavior: Read More [+]

Rules & Requirements

Prerequisites: Completion of biological prerequisites for the major and consent of instructor; a course in mammalian physiology recommended

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Kriegsfeld
Also listed as: INTEGBI C143B

Hormones and Behavior: Read Less [-]
PSYCH 117 Human Neuropsychology 3 Units
Terms offered: Spring 2022, Spring 2020, Fall 2018
This course covers the neural substrates of human behavior including: neuroanatomy, major methods in human brain research (EEG, MEG, PET, MRI, fMRI, TMS, Optical Imaging), neurological disorders resulting in neurobehavioral disorders (i.e. stroke, brain tumor, epilepsy, dementia) and classic neuropsychological syndromes (i.e. amnesia, aphasia, agnosia, executive control, emotional control).
Human Neuropsychology: Read More [+]
Rules & Requirements
Prerequisites: Recommended: MCB/Psych C61 OR Psych 110, or MCB 161
Credit Restrictions: Students will receive no credit for Psychology 117 after taking Psychology N117. A deficient grade in Psychology N117 may be removed by taking Psychology 117.
Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week
Summer: 6 weeks - 5 hours of lecture and 2.5 hours of discussion per week

Hours & Format
Fall and/or spring: 15 weeks - 2-4 hours of lecture and 2-0 hours of discussion per week
Summer: 6 weeks - 5-7.5 hours of lecture and 2.5-0 hours of discussion per week
8 weeks - 3.5-5.5 hours of lecture and 2-0 hours of discussion per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Basic Issues in Cognition: Read More [+]
PSYCH C120 Basic Issues in Cognition 3 Units
Terms offered: Fall 2023, Fall 2022, Spring 2022, Fall 2021
Theoretical foundations and current controversies in cognitive science will be discussed. Basic issues in cognition—including perception, imagery, memory, categorization, thinking, judgment, and development—will be considered from the perspectives of philosophy, psychology, computer science, and physiology. Particular emphasis will be placed on the nature, implications, and limitations of the computational model of mind.
Basic Issues in Cognition: Read More [+]
Rules & Requirements
Credit Restrictions: Students will receive no credit for Psychology C120 after passing PSYCH N120. A deficient grade in PSYCH N120 may be removed by taking PSYCH C120.

Grading/Final exam status: Letter grade. Final exam required.

Animal Cognition: Read Less [-]

PSYCH C123 Computational Models of Cognition 4 Units
Terms offered: Fall 2023, Spring 2022, Fall 2020, Spring 2013
This course will provide advanced students in cognitive science and computer science with the skills to develop computational models of human cognition, giving insight into how people solve challenging computational problems, as well as how to bring computers closer to human performance. The course will explore three ways in which researchers have attempted to formalize cognition -- symbolic approaches, neural networks, and probability and statistics -- considering the strengths and weaknesses of each.
Computational Models of Cognition: Read More [+]

Rules & Requirements

Prerequisites: Calculus, discrete mathematics, CogSci 1/1b/N1, Computer Science 61A, or equivalents

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of lecture and 1 hour of discussion per week

Additional Details

Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Alternative to final exam.
Also listed as: COG SCI C131

Computational Models of Cognition: Read Less [-]

PSYCH 124 The Evolution of Human Behavior 3 Units
Terms offered: Spring 2022, Fall 2021, Spring 2021
This course analyzes human behavior in light of evolutionary principles (such as natural and kin selection) and in comparison with other animal species. Topics include how humans evolved different adaptations to their environment, such as embodied (digestive and sensory systems), cognitive (tool use, language), and social (cooperation, political systems) adaptations and finally how human behavior has co-evolved with technology in the Neolithic, industrial and digital ages.
The Evolution of Human Behavior: Read More [+]

Rules & Requirements

Prerequisites: Psychology 1 or 2

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Jacobs
The Evolution of Human Behavior: Read Less [-]
PSYCH 125 The Developing Brain 3 Units
Terms offered: Fall 2022, Fall 2020, Spring 2018
What are the changes in brain structure and function that underlie improvements in cognitive abilities over childhood and adolescence? Or, coming from a different perspective, what insights can we gain regarding the neural basis of cognition by examining how the brain develops? And how are such findings relevant for medicine, education, and the law? The cutting-edge new field of developmental cognitive neuroscience is beginning to address these and other questions. This course will constitute an overview of current research and methods in this field, focusing on both typically and atypically developing children and adolescents. There is no textbook for this course; all readings will be primary sources (e.g., journal articles).

The Developing Brain: Read More [+]

Rules & Requirements
Prerequisites: Recommend prior coursework in neuroscience, such as Psych/MCB c61, Psych 110, Psych 117, or Psych/COGSCI C127
Credit Restrictions: Students will receive no credit for 125 after taking 192 Fall 2007. Students will not receive credit for Psychology 125 after taking Psychology N125. A failing grade in Psychology N125 may be removed by taking Psychology 125.

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Instructor: Bunge

The Developing Brain: Read Less [-]

PSYCH C126 Perception 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
An introduction to principal theoretical constructs and experimental procedures in visual and auditory perception. Topics will include psychophysics; perception of color, space, shape, and motion; pattern recognition and perceptual attention.

Perception: Read More [+]

Rules & Requirements
Prerequisites: Consent of instructor. 101 recommended

PSYCH 130M Psychopathology Across the Life Span 3 Units
Terms offered: Summer 2023 First 6 Week Session, Summer 2022 First 6 Week Session
Course Overview: This is an introductory course to developmental and adult psychopathology. This course will introduce the key concepts, terminology, and principles of developmental and adult psychopathology and commonly used research methods in studying mental health problems across the life span. The discussion of concepts and methods will guide our discussions of major mental health problems: 1) early childhood (trauma and stress-related disorders, autism); 2) middle childhood (attention and conduct problems); 3) adolescence (substance use problems, eating disorders); 4) adulthood (mood disorders, schizophrenia). Topics on stigma and race/ethnicity/culture and mental illness will also be discussed.
Psychopathology Across the Life Span: Read More [+]

Objectives & Outcomes

Course Objectives:
Students are encouraged to apply knowledge gained from class to understand clinical cases or problems in the real-world. Students are expected to demonstrate awareness and knowledge of how social and cultural contexts, race and ethnicity, gender, and other diversity factors influence the etiology and manifestation of psychopathology. Students are expected to demonstrate basic knowledge of the major disorders, dysfunctions, and conditions of child and adult psychopathology, and possible etiologies and developmental courses. Students are expected to demonstrate knowledge of the basic terminology, principles, and research methods of developmental and adult psychopathology.

Rules & Requirements

Prerequisites: Students need to have previously taken Psychology 1 in order to enroll into this course

Hours & Format

Summer:
3 weeks - 15 hours of lecture per week
6 weeks - 7.5 hours of lecture per week

Additional Details

Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.

Psychopathology Across the Life Span: Read Less [-]
PSYCH N130 Clinical Psychology 3 Units
Terms offered: Summer 2016 First 6 Week Session, Summer 2014 10 Week Session, Summer 2014 First 6 Week Session
Theoretical and empirical approaches to the explanation of psychological dysfunction. The relation between theories of psychopathology and theories of intervention. A critical evaluation of the effects of individual, family, and community approaches to therapeutic and preventive intervention. Thematic focus of the course may change from year to year. See department notices for details.

Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week
Summer: 6 weeks - 5 hours of lecture and 2.5 hours of discussion per week

PSYCH 132 Applied Early Developmental Psychopathology 3 Units
Terms offered: Second 6 Week Session, Spring 1999, Spring 1996
In this course, we examine the developmental trajectories that lead to mental illness in young children by: 1) understanding abnormal development in the context of normal development, and vice versa; 2) using a developmental approach to identify continuities and discontinuities; 3) addressing how mental illness develops and why; 4) learning the role genes and contexts of development play; 5) investigating multiple levels, and the dynamic reciprocal transactions among them; and 6) applying our knowledge to children’s real-world experiences, to better understand the mental illness, its mechanisms, and its challenges.
Applied Early Developmental Psychopathology: Read More [+]
Rules & Requirements
Prerequisites: Prioritizing Education and Letters and Science Summer-Only Minor Students
Hours & Format
Summer:
6 weeks - 8 hours of seminar per week
12 weeks - 4 hours of seminar per week

PSYCH 133 Psychology of Sleep 3 Units
Terms offered: Fall 2021, Fall 2020, Fall 2019
This course has two primary goals: (1) to provide a basic introduction to the study of sleep and an overview of sleep measurement, regulation, ontogeny, phylogeny, physiology, and psychology; and (2) to provide a basic introduction to sleep disorders including their classification, cause, and treatment.
Psychology of Sleep: Read More [+]
Rules & Requirements
Credit Restrictions: Students will receive no credit for Psychology 133 after taking Psychology N133. A failing grade in Psychology N133 may be removed by taking Psychology 133.

PSYCH 135 Treating Mental Illness: Development, Evaluation, and Dissemination
3 Units
Terms offered: Spring 2022, Spring 2021, Spring 2020

Although progress has been made in developing and disseminating evidence-based treatments for most forms of mental illness, there are still huge gaps in our knowledge base. Coverage of serious mental illness with adequate and disseminable intervention strategies is all too limited. Hence, there is a great need for the next generation of clinical scientists to contribute to the mission of treatment development for mental illness. In this course we will learn about, and critique, treatment development models. We will review the steps in treatment development spanning from the study of mechanisms on to proof of concept and to establishing the feasibility of novel treatment ideas.

Treating Mental Illness: Development, Evaluation, and Dissemination:

**PSYCH 137 Mind-Body and Health 3 Units**

Terms offered: Summer 2023 3 Week Session, Summer 2022 3 Week Session, Summer 2021 3 Week Session

Course explores psychosomatics or mind-body interactions in a dozen diseases/disorders from recurrent ailments (e.g., asthma, gastrointestinal disorders) and chronic diseases (e.g., hypertension) to “terminal” diseases (e.g., cancer, AIDS); also included are specific disorders of appetite, sleep, and sexual functioning. For each of these, (i) symptoms (physical and psychological) are outlined, (ii) epidemiological data are used to illustrate socio-cultural underpinnings of health, and (iii) etiology examines how emotion, personality, and other psychological variables interact with the biological. Finally, (iv) psychosocial assessment and (v) cognitive-behavioral-affective treatments are presented for each disease/disorder.

**Objectives & Outcomes**

**Course Objectives:**
1. To be acquainted with cognitive, affective, behavioral treatments and lifestyle change
2. To be acquainted with psychological assessment of relevant symptoms and sequelae
3. To interpret epidemiological findings from a socio-cultural perspective of health
4. To learn relevant terminology in health-related disciplines
5. To recognize physical as well as behavioral symptoms of diseases/disorders
6. To trace the evolution of the field of psychosomatics
7. To uncover the psychosomatic etiology of diseases and disorders covered in the course
8. To understand the different types of psychosomatic processes

**Hours & Format**

Summer:
- 3 weeks - 15 hours of lecture per week
- 6 weeks - 7.5 hours of lecture per week

**Additional Details**

**Subject/Course Level:** Psychology/Undergraduate

**Grading/Final exam status:** Letter grade. Final exam required.

**PSYCH 138 Global Mental Health 3 Units**

Terms offered: Summer 2022 First 6 Week Session, Summer 2021 3 Week Session, Summer 2020 3 Week Session

Global mental health seeks to alleviate suffering caused by mental disorders globally. Although most of the world lives in low-and-middle income countries, the majority of mental health resources are concentrated in high-income countries. Therefore, we focus on the mental health burden in low-resource settings. Through primary articles and recent chapters, this course integrates the scientific evidence, cultural and contextual nuances, and interdisciplinary approaches of global mental health.

**Objectives & Outcomes**

**Course Objectives:**
1. Gain an understanding of the:
   - Global perspectives and priorities in understanding mental health.
   - Multidimensional nature of mental health in low-resource settings—biological, psychological, cultural, economic, community, and organizational dimensions that are central to understanding and addressing mental disorders.
   - Importance of cultural expressions, cultural differences, and contextual nuances that affect diagnosing and treating mental disorders.
   - Major individual, clinical, community and population approaches to preventing, treating and managing mental disorders.
   - Role of the mental health delivery systems in preventing, identifying and treating mental disorders in different contexts.
2. Develop the critical thinking skills necessary to evaluate scientific ideas and research in original scientific papers and popular media
3. Learn to articulate and communicate both orally and in written form a critical and nuanced understanding of current global mental health research

**Hours & Format**

Summer:
- 3 weeks - 15 hours of lecture per week
- 6 weeks - 7.5 hours of lecture per week

**Additional Details**

**Subject/Course Level:** Psychology/Undergraduate

**Grading/Final exam status:** Letter grade. Alternate method of final assessment during regularly scheduled final exam group (e.g., presentation, final project, etc.).

Global Mental Health: Read Less [-]
PSYCH 139 Case Studies in Clinical Psychology 3 Units
Terms offered: Summer 2023 First 6 Week Session, Summer 2022 Second 6 Week Session, Summer 2021 Second 6 Week Session
This course is for students who are curious about clinical psychology and who seek to explore real world cases and examples of mental health diagnoses. Through the use of clinical cases and first-person accounts, this course will give an overview of the diagnostic criteria mental health providers use to make diagnoses, and analyze environmental and other causal factors, with a view to possible treatment options for various mental disorders.

Rules & Requirements
Prerequisites: Psychology 130, 131, or equivalent

Hours & Format
Fall and/or spring: 15 weeks - 3 hours of lecture per week
Summer: 6 weeks - 7.5 hours of lecture per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

Case Studies in Clinical Psychology: Read More [+]

PSYCH 140 Developmental Psychology 3 Units
Terms offered: Fall 2023, Spring 2023, Fall 2022
This course explores the development of children from birth to adolescence, in a wide range of areas including biological, cognitive, linguistic, social, and personality development. It also covers the effects of genes, experience, and social context on children's development.

Rules & Requirements
Prerequisites: Recommended: Psych 1

Hours & Format
Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week
Summer: 6 weeks - 5 hours of lecture and 2.5 hours of discussion per week

Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.

**PSYCH 142 Applied Early Developmental Psychology 3 Units**

Terms offered: Summer 2023 Second 6 Week Session, Summer 2022, Summer 2021

This lecture and small group activity course will examine the development of young children—from the prenatal period to age 8—in the varied contexts in which development occurs. The course is designed to introduce the basic theories and the research approaches that have been used to develop them. We will also explore how the contexts, the influences of environments in which children are growing and living, affect their development and our understanding of children. We will discuss how this understanding may be different, depending on whether one has studied psychology, neuroscience, education, social welfare, public health, or public policy, and how each contributes to our deeper understanding of children’s healthy development.

**Rules & Requirements**

**Prerequisites:** Prioritizing ED&LS Summer-Only Minor Students

**Hours & Format**

**Summer:**
- 6 weeks - 8 hours of seminar per week
- 12 weeks - 4 hours of seminar per week

**Additional Details**

**Subject/Course Level:** Psychology/Undergraduate

**Grading/Final exam status:** Letter grade. Alternate method of final assessment during regularly scheduled final exam group (e.g., presentation, final project, etc.).

Applied Early Developmental Psychology: Read More [+]

---

**PSYCH 145 Human Nature 3 Units**

Terms offered: Summer 2002 10 Week Session, Summer 2001 10 Week Session, Summer 2000 10 Week Session

What makes humans unique? What makes humans different from other animals? The proposed course will be addressing these questions. We will examine the origins and evolutionary foundations of human psychology by synthesizing research from developmental, comparative, and cross-cultural psychology. To do so, we will compare the psychology of non-human primates, especially chimpanzees, to human psychology and compare human psychology across a wide range of cultural backgrounds.

**Rules & Requirements**

**Credit Restrictions:** Students will receive no credit for PSYCH 145 after completing PSYCH 145. A deficient grade in PSYCH 145 may be removed by taking PSYCH 145.

**Hours & Format**

Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

**Additional Details**

**Subject/Course Level:** Psychology/Undergraduate

**Grading/Final exam status:** Letter grade. Final exam required.

Human Nature: Read Less [-]
PSYCH 147 Methods in Cognitive Development 3 Units
Terms offered: Spring 2023, Spring 2022, Spring 2021
The goal of this course is to introduce you to the excitement of studying development, primarily in humans. The course covers different methodologies for studying development, and how to interpret the resulting data. Students will become more wise consumers of empirical data on development, whether those data appear in scholarly or popular media. This course provides students with the analytical tools and productive skepticism required to objectively evaluate findings in developmental science.
Methods in Cognitive Development: Read More [+]

PSYCH 149 Early Development & Learning Science Core Seminar 3 Units
Terms offered: Summer 2023 First 6 Week Session, Summer 2022, Summer 2021
This course serves as the foundation to the Early Development & Learning Science minor. It will help students understand how best to promote children's robust early development and learning, integrating a variety of different perspectives. A wide range of approaches, representing different disciplines—education neuroscience, psychology, public health, public policy, and social work—will be presented by visiting lecturers to impart key aspects of supporting young children. Each perspective is necessary to understand and integrate with the others to most effectively address the complex problems facing young children and their families today.

PSYCH 149A The Developing Child Practicum: Linking Research and Practice 3 Units

Terms offered: Summer 2023 First 6 Week Session, Summer 2022, Summer 2021

A new seminar and fieldwork course designed to increase participants’ knowledge of interdisciplinary, developmental science and how it applies to interdisciplinary practices when working with or on behalf of children ages 0-8. Participants will learn how to apply and integrate current research findings through hands-on experiences provided through their fieldwork placements. They will learn how to engage in more effective, research-informed interactions with children. The focus is on professional growth, including how to develop an interdisciplinary approach to working with or on behalf of children and their families.

The Developing Child Practicum: Linking Research and Practice: Read More [+]

Objectives & Outcomes

Course Objectives: Participants will (further) develop their skills in facilitating Social and Emotional Support, Well-Organized Classrooms, Instructional Interactions. The course is grouped into five modules using these three areas as focal points. Each class meeting will give students the opportunity to know, see, do, and reflect, as the core components of effective and intentional interactions with young children.

Rules & Requirements

Prerequisites: Prioritizing ED&LS Summer-Only Minor Students 1) Sign up for a weekly 5-hour practicum placement 2) Provide copies of records verifying: - Tuberculosis (TB) clearance - Measles, Mumps, and Rubella Immunization (MMR) - Pertussis/Whooping Cough Immunization - Influenza (Flu) Vaccination or a signed opt-out statement

Hours & Format

Fall and/or spring: 15 weeks - 3 hours of seminar and 4 hours of fieldwork per week

Summer:
6 weeks - 7.5 hours of seminar per week
12 weeks - 4 hours of seminar per week

Additional Details

Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: Letter grade. Alternative to final exam.

Grading/Final exam status: Letter grade. Alternative to final exam.

Contexts of Early Development: Read Less [-]
PSYCH 149C Design Thinking for ED&LS 3 Units
Terms offered: Summer 2018 Second 6 Week Session
This course will teach a human-centered, evidence-based method for finding new ways to solve persistent problems: Design Thinking. Design Thinking is a methodology for collaborative problem solving pioneered at the design firm IDEO and Stanford University to come up with game-changing solutions to difficult problems. As student learners accustomed to taking others' perspectives and problem solving, we are especially well-suited to use Design Thinking. We will be tackling the problem of children's school readiness. The goal of this class is to find imaginative and practical solutions -- imaginative enough to be exciting and effective for children and families, and practical enough to be able to pilot these solutions during the class. Design Thinking for ED&LS: Read More [+]

Rules & Requirements

Prerequisites: Prioritizing ED&LS Summer-Only Minor Students

Hours & Format

Summer:
6 weeks - 7.5 hours of seminar per week
12 weeks - 4 hours of seminar per week

Grading/Final exam status: Letter grade. Alternate method of final assessment during regularly scheduled final exam group (e.g., presentation, final project, etc.).

Design Thinking for ED&LS: Read Less [-]

PSYCH 149D Early Childhood Policy 3 Units
Terms offered: Summer 2023 First 6 Week Session, Summer 2022, Summer 2021
This seminar examines how the diverse policy contexts in which children are born and raised have dramatic implications for their life trajectories. We will explore how, when and why government intervenes in children’s lives, through family, pre-/school, community, and digital media contexts, aiming to improve their developmental trajectories. From this basis, we investigate the effects of policies on children locally, nationally, and internationally. Drawing from a variety of case studies and empirical research, students will gain a deep understanding of policy goals, development, implementation, and implications. After gaining familiarity with early childhood policies, students will develop their own early childhood policy. Early Childhood Policy: Read More [+]

Objectives & Outcomes

Course Objectives: Learn to use new digital tools in creating multimedia texts and artifacts that demonstrate critical understanding of course content.

Build collaboration skills.

Demonstrate their understanding and skills through designing family, pre-/school, community, and digital media policy that supports the health and development of young children.

Gain fluency in writing and analytic thinking by critiquing existing and proposed policy.

In this course, students will:
Learn to interpret relevant contextual factors that determine the viability and impact of family, pre-/school, community, and digital media policy.

Rules & Requirements

Prerequisites: Prioritizing ED&LS Summer-Only Minor Students

Hours & Format

Summer:
6 weeks - 7.5 hours of seminar per week
12 weeks - 4 hours of seminar per week

Additional Details

Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: Letter grade. Alternate method of final assessment during regularly scheduled final exam group (e.g., presentation, final project, etc.).

PSYCH 162 Human Happiness 3 Units
Terms offered: Summer 2011 10 Week Session, Summer 2011 Second 6 Week Session, Summer 2009 Second 6 Week Session
This course will take an interdisciplinary approach to an understanding of happiness. The first part of the course will be devoted to the different treatments of happiness in the world's philosophical traditions, focusing up close on conceptions or the good life in classical Greek and Judeo-Christian thought, the great traditions in East Asian thought (Taoism, Buddhism, Confucianism), and ideas about happiness that emerged more recently in the age of Enlightenment. With these different perspectives as a framework, the course will then turn to treatments of happiness in the behavioral sciences, evolutionary scholarship, and neuroscience. Special emphasis will be given to understanding how happiness arises in experiences of the moral emotions, including gratitude, compassion, reverence and awe, as well as aesthetic emotions like humor and beauty.

PSYCH 163 Development of Prejudice and Bias 3 Units
Terms offered: Fall 2023, Spring 2023, Fall 2021
We currently live in a society riddled with prejudice and inequality. In this class we will explore the emergence and development of prejudice across the lifespan, while paying close attention to the first 10 years of life. This class aims to: 1) foster a critical understanding of how and why prejudice has been maintained across generations and 2) foster intentional thought about how create and maintain a more equitable society through a psychological lens.
Development of Prejudice and Bias: Read More [+]

Objectives & Outcomes

Course Objectives: To help students understand the interplay between mind, culture, and society.
To highlight the ways in which prejudice and inequality are perpetuated across time and generations.
To promote critical reflection on the current state of society and the effects it has on prejudicial thoughts, attitudes, and behaviors.

Student Learning Outcomes: Learn how to analyze, describe, and integrate psychological research, perspectives, and theories that explain the development of prejudice and inequality. Learn how to identify prejudice and inequality, and the processes that explain how these attitudes, beliefs, and behaviors emerge and are reinforced throughout development. To foster intentional thought regarding how to design a more equitable society.

Rules & Requirements

Credit Restrictions: Students will receive no credit for PSYCH 163 after completing PSYCH 163. A deficient grade in PSYCH 163 may be removed by taking PSYCH 163.

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Grading/Final exam status: Letter grade. Final exam required.

PSYCH 166AC Cultural Psychology 3 Units
Terms offered: Summer 2023 Second 6 Week Session, Summer 2022 Second 6 Week Session, Summer 2021 Second 6 Week Session
The course will review research on culture, race, and ethnicity and will consider the implications of these findings for our understanding of race, culture, and ethnicity in American society. Mounting evidence suggests that psychological processes are culture-specific, theory-driven, and context-dependent. This course will focus on the effects that theories of mind, person, self, and social institutions have on human cognition, motivation, emotion, and social interactions in American society. Students will gain a better appreciation of the ways that cultural traditions and social practices regulate and transform psychological functioning. Simply, the course is about how culture affects psyche and how psyche affects culture.
Cultural Psychology: Read More [+]

Rules & Requirements

Prerequisites: Psych 160 is recommended

Requirements this course satisfies: Satisfies the American Cultures requirement

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Summer: 6 weeks - 7.5 hours of lecture and 0 hours of discussion per week

Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.
PSYCH 167AC Stigma and Prejudice 3 Units
Terms offered: Spring 2023, Fall 2021, Spring 2021
Traditionally, research on prejudice and stereotyping has focused on the psychological mechanisms that lead people to be biased against others. Recent research has begun to shed light on the psychological legacy of prejudice and stereotyping for their targets. This course will review the major contributions of each of these literatures, providing students with a broad understanding of both classic and current issues in the field. The course will be divided into three sections: bias (i.e., the perpetrator’s perspective), stigma (i.e., the target’s perspective), and intergroup relations.

PSYCH 170 Clinical and Counseling Professions: Practice & Research 3 Units

Terms offered: Summer 2023 3 Week Session, Summer 2022 First 6 Week Session

What does applied mental health practice and research look like? This course aims to provide an overview of major issues, debates, and tensions in the applied mental health field. This course assumes that effective mental health treatment and research rests on the following foundations:

1) best available scientific evidence;
2) culturally-sensitive & contextual understanding of mental health;
3) contextualizing this topic in the major debates of the mental health field;
4) an interdisciplinary approach that recognizes the value of biological, psychological and societal contributions to mental health and its alleviation as well as overlaps across medicine, psychology, social work, and larger societal/cultural influences.

Objectives & Outcomes

Course Objectives: Ability to articulate both orally and in written form a critical, nuanced understanding of current debates and issues within mental health professions. Critical thinking skills to evaluate scientific ideas and research in original scientific papers & their presentation (or absence) in popular media. Understanding of the biopsychosocial approach towards preventing, identifying and treating mental disorders in different contexts.

Rules & Requirements

Prerequisites: Students should have taken Psychology 1 before taking this course

Hours & Format

Summer:
3 weeks - 15 hours of lecture per week
6 weeks - 7.5 hours of lecture per week

Additional Details

Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: Letter grade. Alternative to final exam.

PSYCH 171 Psychological Research on Children of Immigrant Families 3 Units

Terms offered: Summer 2023 First 6 Week Session

The goal is to provide a systematic learning experience in the scientific field of interdisciplinary research on children of immigrant families. Students will learn about the scientific theories, research methods, and key research findings. Students will be exposed to primary and secondary source readings on ecological and socio-cultural theories of human development, the guiding framework for research on immigrant families. Students will also read theoretical and empirical research articles on language, cognitive, academic, and socio-emotional development of children in immigrant families, as well as prevention, intervention, and policy research on children of immigrant families.

Objectives & Outcomes

Course Objectives: Develop skills to conduct literature review, critically evaluate the presentation of scientific ideas and research in original science papers as well as the popular media, and synthesize and summarize the key findings from a literature. Gain knowledge on demographic, socio-cultural, and interpersonal characteristics of major immigrant groups in the U.S. Gain knowledge on ethical issues in conducting human subjects research with immigrant families. Gain knowledge on the definitions of and research methods for studying psychological constructs unique for immigrant families: acculturation, acculturation stress, bilingualism, racial discrimination. Gain knowledge on theoretical models of human development (e.g., the bioecological theory, socio-cultural theory) and their applications to research on children of immigrant families.

Rules & Requirements

Prerequisites: As an advanced elective for the undergraduate minor, all prerequisites must be completed by the time the student is enrolled in this course

Credit Restrictions: Students will receive no credit for PSYCH 171 after completing PSYCH 171. A deficient grade in PSYCH 171 may be removed by taking PSYCH 171.

Hours & Format

Fall and/or spring: 15 weeks - 2 hours of lecture and 1 hour of discussion per week

Summer:
3 weeks - 15 hours of lecture and 0 hours of discussion per week
6 weeks - 7.5 hours of lecture and 0 hours of discussion per week

Additional Details

Subject/Course Level: Psychology/Undergraduate

Grading/Final exam status: Letter grade. Final exam required.
PSYCH 180 Industrial-Organizational Psychology 3 Units
Terms offered: Summer 2013 10 Week Session, Summer 2013 First 6 Week Session, Fall 2005
Primarily for majors. Introduction to the field of industrial psychology, covering fundamental theory and concepts in personnel and social aspects in the field. Concerned with the processes involved in developing and maintaining organizations.

PSYCH 181 Emotion, Motivation, Influence: Psych in the Real World 3 Units
Terms offered: Summer 2023 Second 6 Week Session
The goal of this course is to provide students with an introduction to the practical implications of personality and social psychology in the professional setting. Through a combination of theoretical readings and practical applications, students will learn how to apply psychological theory and research to a range of workplace-related questions, such as what makes a workplace attractive to employees, how to match individuals with the right organizations, and how to design jobs that increase employee motivation and build cohesive, collaborative teams. Additionally, the course will explore important topics such as diversity and inclusion in the workplace.
Emotion, Motivation, Influence: Psych in the Real World: Read More [+]
Objectives & Outcomes
Student Learning Outcomes: Students in this course will understand the ways in which social/personality psychology is related to organizational behavior, and will possess the background knowledge about individual trait, person perception, social behavior, and group collaboration required to think competently and critically about how to apply these knowledge in the applied world.
Hours & Format
Summer: 6 weeks - 7.5 hours of lecture per week
Additional Details
Subject/Course Level: Psychology/Undergraduate
Grading/Final exam status: Letter grade. Final exam required.
Emotion, Motivation, Influence: Psych in the Real World: Read Less [-]

PSYCH 192 Special Topics in Psychology 3 Units
Terms offered: Fall 2016, Spring 2016, Fall 2013
Course examines current problems and issues in psychology.
Special Topics in Psychology: Read More [+]

PSYCH 192P Psychology Post Baccalaureate Capstone 3 Units
Terms offered: Spring 2019, Fall 2018, Fall 2017
The Psychology Post Baccalaureate Program at UC Berkeley is intended to serve as a training program for students who have interest in pursuing graduate degrees in Psychology but who are lacking necessary academic training and research experience. In addition to the required course and lab work, Post Baccalaureate students are required to complete a two-part research learning project, called The Capstone Experience. The Capstone Experience consists of two components: an applied written submission and a formal research presentation.
Psychology Post Baccalaureate Capstone: Read More [+]
Objectives & Outcomes
Course Objectives: Students will receive training in APA style writing and presentation skills.
Student Learning Outcomes: Students will learn APA writing and presentation styles.
Rules & Requirements
Prerequisites: Consent of instructor
Credit Restrictions: Course may not be repeated for credit.
